

George Adamski and H. C. Petersen photographed at the SUFOI-congress

QUESTIONS AND ANSWERS

Page 49 to page 84 are reproduced from memory by mr. H. C. Petersen. The Answers are held in short terms.

Q: Why is Earth, our planet, inhabited by human beings some of whom display the most horrifying brutality – indeed the word brutality is far too mild an expression?

A: It is true that Earth is inhabited by mentally subdued individuals. However, we are not born with that brutality, we drink it in with mother's milk, we learn it at school, during education and the whole life through.

A change to the better will demand an alteration of the mind of the people inhabiting this planet – including you and me. So, if we start with ourselves it might spread like ripples in the water – and if it should be long before results can be registered you will until then improve yourself.

Q: Why is it only in the western hemisphere that beings from other planets make landings?

A: Human beings from our neighbour planets do land in *all* countries of the world – perhaps more information will seep through the iron curtain in time – it is only a question of time.

Q: Why did the Creator provide people on Earth with so valuable things in the air, on the ground and in the subsoil that a paradise could be created on Earth, when the greater part of these things are being misused in the most dreadful way?

A: All planets are abundantly provided with things that may give those people living on them a carefree existence. Some planets utilize their richness less than we do, and some utilize it better. We shall also learn to utilize it in the right way after all.

Q: What can Adamski tell about The Great White Brotherhood, also known as The Brotherhood Of The Seven Rays, which, I've read, is co-operating with the space men?

A: The assertion is pure fiction, conceived by many people over the years in our time for instance by George Hunt Williamson. Some of those people who once supported these absurd ideas are now fighting each other – indeed an admirable outcome, don't you think so?

The space men know nothing about white or black brotherhoods!

Q: Do the space men you have met know anything about the solar saucer from Mu and the secret signs on the great Marcahuasi plateau in South America, which are only to be seen from an aeroplane?

A: The golden solar saucers are ordinary saucers of the same kind which may be seen today – it is technical and atmospheric conditions that cause the golden glow.

The signs on the Marcahuasi plateau are just a few of many known, which the space men have once contributed to producing.

Q: Do you believe in natural spirits like for instance gnomes, goblins and elfins, which are known from the popular legends?

A: Yes and no! No doubt that things like that and many other things have been observed – or at least they have been construed in such a way by the people who have »seen« them. In all cases it has been reflections of forms of thought – and they may still be seen, though to no great extent because now people in general know that such thing do *not* exist.

Q: Do the space people have a »third eye«? Are they able to see the human aura and the radiation from everything in nature?

A: Three times yes! »The third eye« is a sectarian expression for telepathy. The human aura is the magnetic radiation of a human being – like everything in nature has its radiation.

All human beings are provided with these three faculties, but only a very few know the associate branch of science because they don't know themselves.

Q: Is music from other planets like any forms of music we know on Earth. I think of Debussy in particular?

A: You may say that there is music like ours, but there is »worse« and »better« music too. If you take Venus for instance, the music is different there because of a far greater knowledge of musical instruments and their interaction.

Q: Do you know what happened to Cedric Allingham, the author of »Flying Saucers from Mars«? Nobody has seen him since he disappeared in Switzerland in 1955!

A: No. I just know that he disappeared a short time before he was supposed to go to the U.S. in order to visit me!

Q: Do you think that there are space men in the Danish government?

A: Probably not in the government. They work in connexion with the governments of larger nations – in a few cases of small nations too. Most frequently they bring their influence to bear in

scientific work under or in connexion with the governments – thus probably also in Denmark.

Q: Do the space people use atomic energy in some way?

A: Yes, but not as we do. Where we make destructive use of nuclear energy the space men achieve constructive utilization.

Q: Do you know if any space ship has landed on Greenland and taken somebody along on a trip?

A: No.

Q: Are the temperatures on Venus as high as the scientists assert?

A: No, I think that the temperature on Venus will be decreasing in measure as our civilization prepare to accept the idea of life on the planet! It'll probably drop the first degrees when the Vatican after the conclusion of the council begins to open the door a little!

Q: Are there positive as well as negative communities in our solar system? We are often told of people who disappear in space. Could that be »less developed« space people »violating« the people of Earth?

A: No, there are no such negative communities in our solar system. In most cases when people disappear in space it is of their own free will – the remaining cases we cannot explain yet, and the space people we know have nothing to do with these occurrences!

Q: Why do the space people still stick to a personified God, viz. the notion of a »Creator«, when we know that a Supreme Intelligence must be a multidimensional, universal self?

A: God is a personification, Creator is not. Universe is limited, Cosmos is not. Self is a personification, Father is not. In fact the space men use the expression Cosmic Intelligence where we say Creator!

Q: How do space people live among us in the long run escape registration – e.g. registry office – in the country where they stay?

If they work among us a problem like taxation is bound to arise sooner or later, and there may be many other cases where the persons concerned will be asked about origin. If for instance you are involved in a traffic accident you will automatically be asked about address, place of birth etc.

A: Those space people living »permanently« in certain countries

would not in the long run be able to escape exposure if their presence were not »known and accepted« by certain influential circles.

In other cases they can manage for a long time by means of the »papers« they have.

Q: Do the space people want the people on Earth – in general – to know about their existence? If they do, is it not wrong then to prevent people from getting proofs?

Indeed we have read that the space people do not use force, but when you consider our perilous scientific experiments, which may mean annihilation of millions of people, is it then wrong to force for instance the governments of five Powers into reason?

The information that UFOs have destroyed a factory making locks for nuclear guns in the Soviet shows that after all they are not indifferent to what we make – for our sake and for their own. Wouldn't education and information make the man in the street and his companions give a pull in the right direction?

A: What are proofs? There is a natural limit to what they can do for us.

It is necessary to remember that it must be the great nations and equivalent powers that publish the information – small nations would be forced to silence.

The Powers have ample proof – they have just kept it secret. Thousands of people in these countries have had all the proof they could wish for! Have they been able to alter the policy of secrecy? By no means! That's why we must wait for the development of affairs to bring forth the truth. It's annoying – but that's how it is.

The destroying of certain plants and weapons in East and West is a warning at the right time and place, so that there can be no doubt as to the aim of the warning! If we proceed much farther, other – and greater things may happen!

Q: Have the space men in our solar system initiated a new familiarization program affecting Earth? If so, does Mr. Adamski know the primary contents of the program?

A: The purpose of the current program is to help us up to the point where we can shift for ourselves.

Even after a publication it will be necessary that they help us – not until the leaders will fully understand is the mission of the space people completed.

The familiarization is going on every day all over the world – in many ways.

Q: Extensive programs concerning the undeveloped countries, refugee problems, the fight against disease etc. have been brought about. Have these programs been induced by the space people, or are they only due to a natural development of our civilization?

A: It's a natural development. It is necessary that these countries are able to house and support the enormous number of people which now the fight against disease and famine together with joy at progress permits to live or brings into the world.

Everything is cause and effect!

Q: The U.N. is composed of various nations. But will it ever be possible for such an assembly of sovereign nations to prevent wars and conflicts between the people of Earth before a recognized higher legal authority, e.g. a worldgovernment, is established?

A: It will all depend on the support given to the governments by the respective nations. It is evident that the U.N. can prevent wars, bring about orderly conditions in many fields and be the connecting link between the space men and the authorities of Earth, but – the nations make the decision!

Q: Supposing the different nations could agree upon the establishment of a worldgovernment; would a thing like that have any real chance of acting effectively unless it was subjected to a still higher legal authority like for instance an interplanetary confederation?

A: Yes. I'm fully convinced that a worldgovernment would stand a fair chance of attaining the aim – backed up by the nations, that is!

Q: Is Mr. Adamski of the opinion that the space people can or will further the establishment of a possible worldgovernment, or must a thing like that necessarily wait for a sufficiently high development of man – that is: must the national governments realize for themselves the necessity of a worldgovernment and take the appropriate steps to have it established and recognized?

A: There is no doubt that the national governments will take the initiative – if only the peoples, through elected representatives, will now voice a genuine interest. We all know the saying »The will of the people is the will of the country«.

Q: Is it possible that the rapid termination of the acute crisis in 1962, on account of Cuba, between the U.S. and the U.S.S.R. was due to interference from the space people – or will they never interfere with a matter like that?

A: The space people are anxious to bring under control any situation which might develop into conflict or war!

They certainly take an interest in our matters – frequently a high interest indeed – but they do not interfere! We do that ourselves!

Q: In case one of the persons present here to-day makes a journey he is always certain to bring home at least some small souvenir.

Why don't we ever hear about small presents being exchanged between contact men and visitors from out of space?

A book, a paper or just anything which comes from a distant, hitherto unknown world would be a striking evidence of the wished-for kind.

A: What is evidence? Since the other worlds with which we communicate are not much different from our own world the validity of the evidence would no doubt be questioned at once.

Several presents have been exchanged – but not in order to provide evidence. If flying saucers by the thousand are no evidence, what then is demanded to satisfy selfish points of view.

I'm in possession of crystal from Venus, one hundred per cent pure, tin from Venus, and several other things which directly or indirectly come from Venus or Saturn.

Do you think that these things will do as evidence? You ought to know better!

Q: How are we to interpret M. Aime Michel's conclusion that the U.F.O.s are controlled by intelligent beings that are not human? This assertion appears in »Lumières Dans la Nuit«, Aug./Sep. 1962.

A: Forget it!! The assertion is as morbid as the one which some years ago maintained that the flying saucers were being controlled by bumble-bees!

Q: What minerals are to be found on the different planets outside our solar system?

A: The fact being that all planets were created by the same kind of process you will on the whole find the same minerals everywhere – with minor differences, of course. One hundred per cent pure tin from Venus is a small example of the minor differences from what we have got.

Q: How is the everyday life of these people? Do they know the idea of »brief-case men«: clerks with working hours from 9 a.m. to 4 p.m.?

A: The working hours total 2 days a week, so »brief-case men« do not exist. In the daily work everybody will do his duty according to his ability, and everybody knows that in doing so he will serve the Creator in the best of ways.

Q: Are there any kinds of class-distinction?

A: No. Since money does not exist and all have »equal wages« there will be no class-distinction. Everybody respects everybody, because they know life to be a school. Who is to set himself up as an earthly judge of the human heart? – No, everybody has a significant job, and whether it depends on skill or on university education is not a matter of great importance!

Q: How about the rights of property?

A: Everybody has got what he needs, and as long as he needs anything it belongs to him!

Q: What kind of government is to be found?

A: That will be hard to explain to the satisfaction of everybody, so let me say that in our solar system there is a planetary council for each planet a joint interplanetary council.

The councils are summoned when needed. Thousands of years may pass between certain interplanetary sitting, but then they are important when they take place. In that connection notice my report on the meeting on Saturn – it will be published this summer!

Q: Is there any kind of uniformity in everyday life?

A: Not in the way you imagine. These people do not, like we often do, forget that man as the only being was provided with a free will, given by the creative powers! If you use your free will, a uniformity can only exist in the efforts to obtain a greater degree of unity with the Creator! Isn't that the essence of life?

Q: What about agriculture and industry?

A: No. A uniformity in our meaning of the word does not exist in these fields.

Q: Can information be given about the motive power of the industry: electricity? nuclear energy? or some other source of energy?

A: They use the so-called free energy, which is electricity and nuclear energy and all other kinds of energy at the same time. However, while we »use« destructive nuclear energy their use may be

called positive – they do not split the atom, they let it work for them in the way it has worked in nature since the beginning of time and is going to work forever.

Q: The everyday means of communication?

A: Like ours – only they look somewhat different, and are propelled by the free energy.

Q: Religions?

A: Invented by the people of Earth after being put here at one time. They had a reminiscence of something great and beautiful, and with the space men visiting by way of flying saucers the way to the religions was not long – adapted to varying interests of the powers.

The space people are aware of their divine origin, but they don't spoil things by trying to show off their excellence in public places like for instance the church!

They live like divine beings ought to live, thereby serving the cosmic intelligence in the best way. – That is their »religion«.

Q: How is climate and vegetation?

A: If you were brought to Venus while asleep, the climate or the vegetation would not make you notice that you were not on Earth anymore when you woke up. Unless you were a specialist in one of these fields.

Q: Can a man feel comfortable there without some kind of habituation?

A: That depends on what you mean. As to the weather, the pressure, easily!

It might be harder to adapt oneself to the divine mode of life!

Q: Are there any undeveloped areas?

A: Not in our solar system. In other systems there are human beings on very low levels. By the way, didn't we have a stone age once? And don't we still have one in some places here on earth?

Q: Which standard of value or monetary standard is to be found?

A: Even though gold and precious stones are in abundance on for instance Venus, these materials are used for decoration only. Money does not exist! Nor is there any other standard of value.

Q: Are the various pilots of flying saucers some sort of »super-men« like for instance John Glenn?

A: Yes and no! They are always voluntary, highly trained scientists and specialists. »Supermen« is an irrelevant expression since only supermen and for that matter superwomen are to be found. Through their mode of life and greater knowledge of cause and effect they become physically as well as psychically what we term supermen – because so superseldom we see that kind of man here with us.

George Adamski and autograph collectors

Q: Is life there a sort of »Shangri-la« with eternal youth and without everyday worries?

A: Yes. I don't think we can express it more exact if it must at the same time be concise and easily understood.

Q: How is the fauna there?

A: On the whole like here. However there are no wild animals – in our sense of the word »wild«. Man made the animals wild because he wanted them to live in eternal fear of man.

On the other planets all animals are fellowbeings, filling a place in the process of evolution – and they are appreciated as such.

Q: Do you personally believe that any earthly power will get the chance of – or permission to – a landing on the moon, even if the purpose is scientific?

A: Certainly. I even know it – and, moreover, it doesn't apply to the moon only. They also long to see us on some of the planets!

Q: Aren't the space people running a great risk when they go about here on Earth? I think of the various diseases.

A: Yes. There are actually several dangers. The greatest are diseases and psychical troubles.

That's why those selected to the tasks are always highly educated and trained persons. SE: CHEMICAL REACTIONS

Q: Is the word »lust for power« known there?

A: The word, yes! Not the idea!

Q: Is there any connection between these people and the so-called Neanderthal man?

A: Yes in a way – the Neanderthal man is a species of the ape family or a degenerate man or semi-man. We might call him a cousin of man.

Q: Is there any possible explanation of the disappearance of various ships and aircraft at a point southeast of North America?

A: Maybe – but it will be guessing, so let time reveal that. Like the case will be with things and people disappeared from other places all over the globe.

Q: Is Mr. Adamski a sort of representative or adviser for the U.S. government?

A: No. An assertion like that might create a stir, of course, but I should like to say that I try to be of some assistance here and there where its wanted.

Q: Have the space people reached the summit of ability, or is a scientific development still going on?

A: There is still a development, and so there is at any time and any place. Nobody can become perfect, neither technically nor spiritually! Among other things the space ships they use prove a continuous progress.

Q: Does Mr. Adamski know anything about Christian Science, the science of mind? Founded by Mrs. Mary Baker Eddy, U.S.A., in 1866; today a world-wide organization issuing several publications in addition to the textbook »Science and Health With Key to the Scriptures« – among them the well-known and sober-minded newspaper »The Monitor«.

Mrs. Baker Eddy professes that the commandment to go out in all the world, evangelize, and restore the sick is still valid, but that the curative talent was lost one or two hundred years after Christ – when the Roman Church was gilded.

We reflect God, who is perfect – the evil has no power, and we ought to think rightly. Mrs. Eddy has used the Bible only as a source. – I've read that the Venusians have no diseases or wars (disharmonies).

I have no doubt that Christian Science has much to give people – if we all were conscious of our spiritual origin and were not only thinking materialistically – everything is spiritual.

I'm interested in Christian Science as well as in the subject of the UFOs – Cosmos. That's why I would like to hear Mr. Adamski's opinion.

I'm not at all competent to give the correct information about Christian Science, and I hate to present the matter wrongly – but I feel that »many ways lead to the goal«.

A: It doesn't matter, that you can't tell more about Christian Science – you gave me the cue. I have studied most religions thoroughly many years ago. I know perfectly well what Christian Science is, I've even had several quarrels with the managers.

Alle religions claim that they show the way, but no matter how honest they are, the formation of religion will itself give rise to unnatural limits and distinctions.

Didn't Jesus say that we all might do greater things than he? Didn't he mean, by saying so, that *every* man holds the possibility of becoming conscious of his cosmic origin and of turning it to »account«?

So why be lost in a particular faith?

Everybody can restore sick people – man has always been able to! That no use has been made, for all that, of this ability, is the fault of the individual man. The belief is wanting – the belief in the Cosmic Father, and the belief in oneself.

Seek, and ye shall find – but seek within yourself, that's where you easiestly will find God!

Q: Are the space people able to communicate with you – possibly by means of telepathy – while you are asleep?

A: Yoy might say that (intuitive) impressions can be received during sleep, and that they find expression in dreams. They may come to you – as they do when you are awake, and as described in the book »Telepathy« – out of former existence, or from any human being including space men here or there.

At the time you had the dream the accident was already progressing, so the impressions (the dreams) may come from the incident also, by means of telepathy.

Before a volcano erupts there are many signs of the imminent activity and the danger involved! The animals for instance, mice, rats, cats know it – through telepathy – from the very cosmic force which controls the volcano. Man doesn't usually respond to the warnings. The result? We all know it, indeed.

Q: Is it possible that an accident, in this case an explosion, could be remote-controlled by the space people? There is every indication that both boys who were killed knew that something was going to happen to them.

A: It is likely that the boys knew what was going to happen – and here we may find the explanation of the dreams – but the space men did not cause the explosion!

Q: Are we people of Earth in any way informed about tasks to perform, concerning the development of mankind?

A: Only in very few cases people will realize through a »revelation« what they are to do.

Far more often you will feel it – you will say, »I simply couldn't help it«: that is, you will have an intuitive certainty of what to do.

Q: Can space people who have been living here with some task to accomplish be taken back to their home planet through the occurrence of some accident?

A: If the person in question is born here it is possible – if he is visiting it is not, even if it's a long stay.

Q: Can space men in our days be born on our planet without cosmic consciousness?

A: No! All who are born here – including »ordinary« people – have a cosmic consciousness. It is lost only during adolescence! That may apply to the space people as well. However, most of these will, at a very early age, realize who they are.

Q: If people from Earth are reincarnated on for instance Venus, and the population on Earth is still growing, from where then does the surplus come? Can the animals possibly be promoted?

A: The animals may be promoted – but nevertheless a certain amount of souls must be calculated on.

It is not easy to grasp, but consider the billions and billions of planets on our stage of development, together with the billions and billions of planets below and above our stage of development! There will always be places with decrease and places with increase!

144 billion people live in our solar system today. Just try to imagine only a hundred systems of the same size! What then does a tenfold increase of the population on Earth matter?

ROUNDELETT
WINTER 1974
EDITOR'S PAGE

HARMONIC

Q: For how long time is a »soul« able to stay in the body after death?

A: Death means that the soul has left the body! A few seconds later that very soul is 9 months from seing again the light which was extinguished!

Q: If a man dies without having attained cosmic consciousness, and without being ready for »the next class«, will he then be reborn in a different shape according to a certain scheme, or is it quite accidental where you are reincarnated?

A: Nothing is accidental! Each life creates the next life! Cause and effect and so on. – Who knows what and where the next class is? Maybe it is here, maybe some other place. However, it will allways be in a different shape; or perhaps we should say in a new dress?

Q: In »Inside the Space Ships« it is said about one of the masters, »Not until later did I realize what a position he holds on all planets«.

What kind of position was that? Has this »entity« previously been incarnated on Earth? If so, was he then a historical personage?

A: On his home planet he was a prominent person like for instance Marconi here with us.

He lived here once, and in our opinion he was what we call a historical personage.

Q: Until now only space men from Venus, Mars and Saturn appear in Adamski's books. In a comment on Scully's book Mr.

Adamski has furthermore said that the »creatures« on the other planets are human beings like us, with no more differences than are to be found between people on Earth; however, the size may vary somewhat.

May we conclude from that, that the men from just the three mentioned planets are most like us?

What then are they like, in outline, on each of the other planets? (Giants? Dwarfs?)

From where do they come, those who are 30 feet tall – if in fact those accounts have any foundation?

From where could the Sutton »monster« possibly come?

A: There are many reasons why it is mainly people from Venus and Mars who come here. However I have previously, at a certain occasion, met representatives from seven planets.

The people are as I said before, on the whole alike on all planets – not only in our solarsystem.

In our solar system you will find people who measure from slightly more than 3 feet for the smallest to 10 feet for the tallest. Thirty feet, that speaks for itself!

The Sutton »monster« originates in scared people's telling about a space man in space suit!

Q: Couldn't we have the history of man with just a few more details than in »Inside the Space Ships«, including among other things the placing in time of Atlantis and Lemuria – the fact being that those who have an opinion at all (unfortunately mainly occultists) disagree greatly.

A: Atlantis and Lemuria existed thirty to forty thousand years ago. Both were destroyed by nuclear power.

Atlantis was destroyed when the number of hidden atomic piles had become so high that it caused a gigantic explosion!

Lemuria was destroyed when a hilarious commander was to show the sovereign the power of the nuclear weapons!

Q: At which time during the birth of a child is the soul incarnated?

A: In the moment of conception.

Q: How long time will pass between the incarnations? And has the remark which Jesus made to the thief on the Cross, »To-day you will be with me in Paradise«, any relation to the matter –i.e. instant incarnation?

A: Yes. Jesus talked about resurrection when he spoke to the thief – and posterity failed to see the significance, and allowed it to pass.

There are very few seconds between death and »new« life!

Q: How long is a day and night on Venus?

A: 26 hours.

Q: What was discovered by Mariner II, which did not become published (according to the man who attended the experiment and whom Adamski met, as mentioned in Newsletter)?

A: That there are people on Venus.

Q: We are told that Adamski is now communicating with some space people who »behave« in quite another way than the first party. From where do these men come?

Furthermore it has been announced previously that no »interference« with our wars will happen as long as they do not affect the world outside our own planet. Is that announcement still valid?

Is a third world war going to be tolerated under »The New Cosmic Deal«?

A: The new party is different because it is more trained than its predecessors to fit into the time to come.

We will still have no interference with local affairs!

A third world war will not be stopped – not even an atomic war – unless there is a risk of so high a concentration at one place as to blow up Earth! That will not be tolerated!

Q: Is there still no information about the nature of the sun? We have a suspicion that it is something else and more than just the slow-fusing H-bomb that our science consider it to be. Is there any connection with the »Cosmic Intelligence«?

Could it be possible that Williamson's strange assertion about 12 inner planets in the atmosphere of the sun (like the known planets, just in a smaller scale), has any foundation in reality?

If so, are they cool and inhabited?

A: Williamson talks nonsense! Nothing much is »known« about the sun, it might be better, however, in some years.

Q: The space people act according to a gigantic, fantastic plan – with minor revisions now and then in keeping with progress on

Earth. The plan, which is still in force, must have been prepared centuries ago, and I understand that this is the explanation on for instance the prophecies about our time.

Does the plan contain anything which will, in the nearest future, enforce a publication?

Newsletter hints that »something« is going to happen within the next twelve months. I wonder which kind of event we are to be on the look-out for?

A: The first part of your reflections is correct:

The plan contains nothing which will enforce a publication.

Look out for announcements from governments (science) and the Church!

Q: Is there an »Adamski« behind the iron curtain?

A: Contact has been established with many prominent persons – besides the fact that the space men work in research laboratories and institutes!

Q: You get the impression that the secrecy has been increased of late. Does that mean that the authorities (the American in particular) are simply *with* the silence group, or are we to believe that they are squeezed between the silence group and the truth?

A: I have said before that the closer we get to the »end« the greater the resistance – that still holds good and will keep on so, until the resistance will simply stop because the truth has become known by everybody.

Q: Did anything come of Van den Berg's trip to Amerika?

A: Not yet. It seems that the good man has got into trouble – maybe he should have kept his knowledge to himself until being in Mexico.

Q: Didn't Otis T. Carr succeed, or has it been kept secret?

A: He wasn't able to get his space ship flying, and he is supposed to have lost a lot of money on his experiments.

The former connection with Nicola Tesla, which he has claimed, is probably doubtful.

Q: Is the Vatican the actual center of the silence group?

A: No!

Q: How are the plans about the »cosmic university« getting on?

A: The first class has in fact already started in the U.S.!

I have certain plans for Mexico.

Until now I have been offered land and university on the basis of lease with pre-emption! It will be in the mountains 5000 feet above sea-level, 30 miles from the outskirts of Guadalajara – a city with 750.000 inhabitants .

The details of these plans can be obtained at any time from H. C. Petersen, since he has offered to assist me in planning and founding the »Venus Community« in the way I want it realized!

I know that when the plans will be carried out, people from all regions of the earth will come to join us.

Q: In »Life on Venus« it was said that the space people eat some meat – is more information available about that?

A: Meat is necessary, but they eat it on the principle that only meat from non-carnivorous animals is consumed.

When you notice this you must remember that an earthly fowl would not be edible – if it tastes blood it will »eat« its own chickens. Let that be a hint! Fish do not come under this rule – all kinds of fish are edible!

Q: Is Mr. Adamski able to tell us how the contact men who took him to the waiting flying saucer did contact people on Earth the first time they arrived at our planet? The two gentlemen ought to give at least those people an explanation from whom they got their first suit, shoes etc., the first meal, lodging, job, money, car and many other things. – Maybe they knew the earthly language – in this case English – beforehand, but what about motoring or money or, for instance, shopping?

A: In fact the question has been answered previously.

Let me state then, that space people have been here at all times.

During my time with them I have seen how all the things you don't understand have been possible.

Of course there are procedures I cannot give away, nor can I tell too much about it in general.

As an illustration I can say, however, that nobody will ask a visitor at a restaurant and such places tactless questions as long as he is able to pay.

Clothes, shoes and other everyday necessities can be made everywhere – and job, money, car is just a natural development!

Q: In his book Mr. Adamski says that he didn't ask the two gentlemen if they were married. I wonder if he has later on received further information on the subject. If they were married, was it then to earthly women? And what about possible children? – How do the two contact men manage inquiries from the authorities, concerning for instance former address, parents and so on: questions that sooner or later will be put to people on Earth by registration office, taxation authorities, vicar, doctor, police, passport official, army. Or how do they answer questions from friends and fellows.

A: People by the hundred live on forged papers. Thousands have done so in the course of time!

The »organization« behind the flying saucers knows more about the conditions on Earth than we do ourselves.

Some Space men are married to earthly women – and some have children.

During the years I have communicated with a number of space people of both sexes – they come and go all the time. The latest replacement of the group with which I co-operate took place not long ago.

Q: Suppose the two contact men were taken ill or were injured, and a doctor had to carry out a blood test or some other test on that occasion – would the patient's blood and organs then turn out to be of the same nature as ours?

A: An earthly doctor is not likely to get the opportunity to treat a space man!

People on Earth do not differ from people on other planets as to blood and organs – they are identical!

Q: Do you think, Mr. Adamski, that the scientists on Earth, during their efforts to explore the moon, will find it inhabited – and wouldn't that be »proof« to the people who doubt your story more or less?

A: I don't care if they doubt – if they have got no further than to thinking along those tracks, there is a long way indeed!

Yes, our scientists will discover that the moon is inhabited – to-day as in former times, when earthly observers reported movements, lights and shining objects on and near the moon. But there is no guarantee that it'll become known by the public.

Q: If highly developed people are living on the moon why don't they make themselves known to the inhabitants of Earth? Wouldn't it be easy for them from the comparatively short distance?

A: Nothing is easier! During the last 15 years they have been in our atmosphere, and made thousands of registered landings! These operations are still going on, along with operations from for instance Mars and Venus.

Q: Are you Mr. Adamski, able to tell how the space people prevent overpopulation on their planets?

A: How many children has an average Danish family got? Four, you will possibly answer. Is Denmark overpopulated? Certainly not. A greater knowledge of the facts, based on education, is a natural part of birth-control – we will learn it on Earth too some day.

Q: The space people are vegetarians. Is there a difference, from an ethical point of view, between meat and vegetable food. Aren't the cells of animals just as fit for man as those of the vegetables, considering that the same life is in everything?

A: The space people are *not* vegetarians! Generally speaking, it is not unwholesome to eat vegetables, fish and meat from non-carnivorous animals!

Horses and cows, goats and sheep for instance, do not eat other animals, whereas lions and tigers, dogs and cats do! A fowl will eat its own chickens if it acquires a taste for blood!

So you've got to know the animals and their habits thoroughly if you will attempt to live on this principle.

Q: How is the space people's conception of the idea of luck? Are we to believe (like the spiritualists do) that all the accidents which befall us in the traffic have a special meaning, and that the victims actually are punished for what they did in a previous existence (the Karma law)?

A: It is not true that all these senseless accidents are predestined! Of course a few are, when you consider the great number that happens to-day. Most people, however, die contrary to the purpose, and they are to start again where they left off.

Q: When even the space people have crashes with their ships, isn't that quite accidental? Or is it because of a divine plan?

A: It is accidental! The divine plan of the Creator affects everything, but it does not determine the accidental death of human beings! On the contrary it comes into force when the accidental death has happened!

Q: Do the Planetarians believe in the existence of higher spheres than highly developed material planets?

A: I don't think so! The space people know that life is to be found in communities the fantastic high development of which we wouldn't be able to grasp much! However, the plane on which it exists may be called physical – like the plane on which we are now. But the phases are quite different.

Q: Where do the Planetarians think that the human soul is staying after the physical death, until the rebirth on another planet – and could we have that transition stated more precisely?

A: Don't think that the soul must necessarily be reborn on another planet!

With bearing on the following point, it is, for that matter, unimportant where the soul re-enters the body! If in the neighbour house, in a foreign country, or on another planet – there are only a few seconds from the moment when a soul leaves a body till the time it has entered another!

Q: Was Jesus of Nazareth a delegate from the »Joint Council of Planetarians« in our solar system, or did he come from a higher sphere?

A: Jesus came from our solar system.

Q: Can you, Mr. Adamski, decide on the attitude to adopt towards being a pacifist in our world as it is today? Most people consider the compulsory service necessary to ensure peace, and call conscientious objectors unrealistic and irresponsible. However, the Bible says, »Thou shalt obey God more than man«.

A: If the purpose of the compulsory service is to provide the material for the execution of an aggressive war, it is absolutely right to refuse.

It can't be wrong, however, to contribute to the preservation of peace – indeed it is everybody's duty to do so. We all know what a world war will mean.

You must be realistic! Furthermore I know from experience that the military service is to the advantage of those who want to qualify as specialists. Nowadays the military has implements and educational appliances which are far better than those of other institutions, and young people may profit from that.

Q: Wouldn't it be irresponsible to the inhabitants of the country if

a western government (from an ethical conviction) decided on a one-sided disarmament, resulting in the occupation of the country by an alien, aggressive power and the introduction of party dictatorship?

A: Yes, that would be irresponsible, but I cannot imagine a thing like that. If they did it for ethical reasons, those who were responsible for the disarmament ought to be able to see the retrogression to come – ethically!

Q: Do you, Mr. Adamski, consider internal and international legislation a necessity at our stage of development? Don't you think that a world government – in a disarmed world – is necessary to ensure international peace and order?

A: We've got to have internal as well as international laws to be able to make progress.

The U.N. is a sort of world government, and the more we support this institution through our representatives the closer we get to your world government.

As a matter of fact U.N. encourages many small countries by its mere presence, so that the necessary progress, to prepare us for the things to come, is made everywhere!

Q: In the Danish »Contact Program« it was said that in case of an atomic war the space people would immediately take measures to destroy all stores of atomic weapons. Will that hold true?

A: The space people have the means to do so. It depends on our plans whether they will do it!

They will not interfere with an ordinary atomic war – if you may call a thing like that ordinary – but they will take measures against the bombing of a concentrated area if it were to endanger the solid of Earth.

Q: Did the space people ever interfere with the events of history? I refer to the tales of the Old Testament as well, for instance that of God visiting Abraham.

A: Several times, also of late. But we must read the Old Testament with some discrimination. It tells chiefly of death and destruction originating in the phantasies, wishes and schemes of the narrators.

Q: Is there any chance of utilizing »space power« on Earth in the near future?

A: We've had the possibility for a long time already – the question is only when it will be »discovered« and permitted!

Q: What do you mean by saying that »the animals are developing in another way than man«? Does it mean that man was born as a man, with a fully developed human spirit, from the very beginning?

If that's the case man must have been made *perfect*, without defects, from the very beginning. And then it follows that at some time or another man *fell*, that maybe he lived for millions of years in mental darkness – to set out once more in his struggle for light, for perfection. But then the fall of man must include not only people on Eearth but people anywhere in the universe. Because it was the *species* of man who had to fall to start a development. A perfect being is not able to develop. Only the imperfect can strive for perfection.

Or did the Creator make an imperfect being that had to »aspire«? If this is the case, what was that imperfect being like – man or animal?

The animals are perfect in their way and yet they develop physically, through millions of years, into more perfect creatures. But how is the development of the animal mind? We know that a dog, for instance, will never – from a pureley physical point of view – become anything else than a dog. But what about the dog's spirit? May it not develop through still higher levels, until it reaches the level of man?

In other words: has the human spirit ever made experiences in lower forms of life?

A: Nothing is perfect! Not even the Creator. If the Creator were perfect everything would come to a standstill. The Creator is learning all the time through the thousands of creatures he creates, and the creatures learn from each other. In our daily life a professor would probably soon perish if he had nothing to keep him occupied – he is learning all the time through his former experiences.

The human spirit has made experiences in lower forms of life, as it will do in higher ones!

Q: Is there any connexion between the U.F.O. movements around our planet and the ancient sites of civilization? In this country (Denmark) there are certain theories, to the effect that the U.F.O.s are observed most frequently above places which have been inhabited since the stone age and consequently have a long history of civilization. Are the space people in some way able to register previous historical event? If so, why do they take such an intense interest in them?

A: The space people carry on researches today as they did when they brought the first people to our planet.

They have everything registered, and they can achieve the desired results more easily at the ancient sites of civilization than in previously uninhabited areas – and a research will never stop.

Q: The astronomers assert that Venus is enveloped in deep layers of cloud. Don't the inhabitants of Venus ever see a blue sky and a bright sun?

A: It's true that Venus is enveloped in deep layers of cloud – it took a fairly long time to penetrate when I was there a few years ago. But they do see the sun, and I saw it – it was a radiant summer day. It's never cloudless, but in some areas the clouds will break up and the sun come through – and it's not a rare occurrence.

Q: Isn't Frank Scully talking nonsense when he claims that the dimensions of the U.F.O. which crashed were divisible by 9? We use different units of measurement on Earth, and the American units are far from similar to for instance Danish units of measurement. Consequently the dimensions of the U.F.O. would not by Danish measure be at all divisible by 9.

A: No, Frank is right! We are not speaking of centimeters or inches or such things. The unit represented by the saucer is divisible by 9.

HARMONIC

Q: Is there a ring around Earth, like the one around Saturn?

A: All planets have rings, most of them very faint ones. Three planets in our system have a marked ring, among them Earth. However, the ring around Earth is not so marked as that around Saturn.

JUPITER
SATURN
URANUS

Q: Is there any official contact man behind the iron curtain?

A: I do not know him, if there is any.

Q: Could we have the correct interpretation of the message in the footprints – compared with the one by George Hunt Williamson?

A: Williamson tried to find an explanation in the Bible and through the prophecies.

He didn't succeed – his statements are misleading and false.

Apparently much knowledge is hidden in these footprints.

Two persons – one in Europe and one in South Africa – have found an explanation of the energy. A Japanese has found a prophecy about the future of humanity.

Perhaps we will come across more, as we advance in understanding.

Q: Have the space people interfered with nuclear experiments? I refer to the unsuccessful rainbow bombs, and to the Russian atomic pile which exploded some years ago.

A: Yes, they have interfered several times. An interesting occurrence took place in the U.S. about two years ago.

A rocket with nuclear charge had been launched and was rising slowly from the ground. A moment later a space ship was observed from the ground, intercepting and carrying off the rocket.

The attending generals were seized with panic, and insisted on their being taken away immediately. They thought that they were going to have the rocket thrown at them.

Q: How could the F.B.I. film Mr. Adamski's first contact in the desert? How did they know already?

A: The F.B.I. did not take the film. It has been taken by the U.S.A.F. – I met the pilot later on – and then the film, or a copy of it, has been handed over to the F.B.I.

How did they know it already? I don't know yet. It shows, however, that they knew much before I entered!

Q: Is the silence group active against the U.F.O. case exclusively?

A: The silence group signifies resistance to any progressive step towards human freedom. You may find it everywhere.

Against the U.F.O. case the resistance has used various methods: promises, threats and mysticism. Several people have become the victims of its work – even among my closest fellows I have registered losses.

Q: Here on Earth we judge, or rather estimate and classify our fellow-beings, from earnings and sort of occupation. How are we to change that? The space men let the qualities and inner life of the human being be the only guide, don't they?

A: The space people do not care about such things. Much shorter hours will produce what is sufficient for a regular and satisfactory existence, but will not make fortunes for individuals.

Some day we will also get that far, but it may take some time still – the real worth of a man is only to be »seen« by means of telepathy.

Q: Are hospitals, chemist's shops, sanatoriums and related institutions to be found on for instance Venus, Mars and Saturn?

A: No, they do not exist, the fact being that you don't need such things! Diseases are not to be found!

People living there know themselves to such a degree that they can restore themselves or others in case of accidents, which happen in these worlds too.

Q: Do we find people employed as hospital doctors, practitioners, chemists, nurses, public health nurses, lawyers or policemen?

A: In answering the last part of the question I'll be answering the question in its entirety.

Lawyers are not to be found either, in our interpretation of the education, and policemen would be out of work.

In these cases too, the telepathy is an instrument of the utmost importance.

Q: Here on Earth a gulf has formed now between the academic and the general education. How did the Planetarians manage to bridge this gulf?

A: The gulf can only be bridged by our realizing that we are all equal, regardless of education etc. On the other planets they recognize the divine origin and consequent equality of man, and they do not let the attitude be altered by thing they are given as a loan while living through a phase of development, the individual lives!

All are equally important in the divine plan of the Creator – and the fact that not all have got equally far in cosmic progress, should be to the advantage of the less developed.

Q: How is the problem of juvenile crime solved by the Planetarians?

A: Juvenile crime, and for that matter all forms of crime, will disappear as it were, automatically. It requires only that those who are already »alive«, recognize their responsibility.

If you know the law of cause and effect fully you will not make the mistakes which lead the offspring into crime.

It may be a wrong mood in the mother or in the father during the conception – it may be wrong impulses from family members, friends, community (church, school, police etc.) radio, etc., etc., during the adolescence. It's the influence from without which causes the misery. The problem of the teddy boys is a direct result of the last war. They are victims of the war!

Q: Jesus said that if somebody strikes you on one cheek then offer him the other to fulfil the principle of true love.

A: That's right. Think of Gandhi, he achieved a lot by following that principle. — There is no doubt that it will prove profitable in the long run. But before the state of affairs in the world can be changed everybody must think in the same way.

Q: Suppose a young terrorist or an adult criminal is going to torture or kill me, am I then to let him do so without offering the slightest resistance? Since God claims the revenge for him alone, may we then assume that the perpetrator of violence will be »weighed« in the end?

How about keeping the self-respect and other people's esteem in such a situation? How far must and ought we degrade ourselves?

A: In accordance with the law of cause and effect, the perpetrator will be »weighed« sooner or later. Do notice, however, that the punishing belongs to the Old Testament — the New Testament has a different and positive tendency. Jesus said to Peter that he who draws the sword shall perish by the sword.

Self-respect and other people's esteem are home-made ideas which originate from selfish feeling — on some of the other planets they would rather die than do harm to anybody! Is that in your opinion inconsistent with »self-respect« or »other people's esteem«? On the contrary, isn't it?

Q: Do the cities of the Planetarians present a view as varied as that of earthly cities, in regard to style? Have these cities, like ours, been entirely or partly destroyed by fire, war or cataclysms? Name and describe the various styles.

A: Our neighbour planets have gone through the same development as we are experiencing.

To-day only the cataclysms will happen to them. Earthquakes and volcanic eruptions can never be avoided — they are recurrent. Eruptions are simply necessary, they are the safety-valves of the planet.

The cities are without cars, but they are provided with a sort of roads which are actually the tracks for electro-magnetic traffic. Such traffic takes place from 3 to 20 feet above the ground.

The styles vary from place to place and from planet to planet.

Q: How do the space people, in general, manage the drawbacks of technical progress. For instance the increasing passivity, contact troubles, corpulence owing to lack of exercise, lack of instinct of self-preservation, suicide, the disproportion between the great num-

ber of people starving and the few satisfied, the cultural degeneration caused by low speculation in popular amusements.

A: We use about 7 per cent of our »brain« for its original purpose. And look at what we have achieved with these few per cent! Just imagine what we might perform if we suddenly doubled the percentage!

The space people use about 25 per cent of their »brain«, and have consequently a better knowledge of the actual state of affairs, and of how things ought *not* to be!

Q: Are mentally deficient or insane persons to be found on the other planets?

A: No, mentally deficient and insane persons are born as a result of some wrong mode of life! Insanity at a later age may often date from the moment of conception. But later events may also have great influence.

Q: Which construction do the space people put on the words culture, art, politics, economics and physiology.

Which materials are used for artistic expression, and what is expressed by the art?

Do they have what we on Earth call the technical devices of art: film, gramophone, radio, T.V. and wire recorder?

How do they solve the problem of fitting these things in with the existing branches of art?

A: From what I have seen, the art that we call antique is still to be found on the other planets! Nothing inharmonious is designed, and there is consequently no problem of adaptation.

They use the same materials as we do, only they are purer. No artist on Earth would be able to express himself as the artists there do.

They have radios, T.V.s, gramophones, etc., but the things are different from those we know. For instance what we would call T.V. has colour as well as three-dimensional effect. In case you are not home when T.V. brings something you want to see, you may tune the set to record the transmission: the set has a »brain« where you can find what you need.

Q: How long time do each stage of development take – the pregnancy, the childhood, the adolescence, the manhood, the old age? How long do they live on the various planets?

Do they celebrate the baptism, the birthday, the confirmation, the

HOLOGRAM

wedding, the silver wedding, the golden wedding, the funeral? When do they celebrate altogether, and how?

A: The period of pregnancy is the same everywhere. The childhood covers 2 years on Venus; they do not distinguish between adolescence and manhood, and old age is not experienced - they have »eternal« youth.

On Venus they reach an age of 300 to 1000 years.

They do not celebrate as we do on the occasion of birth etc. - life is a festival they celebrate as long as they live.

Q: What is a wardrobe like on the planets, and what does it include? How are their homes on the whole, in design and arrangement?

Do they have special centres, as we have on Earth (London and Paris), for the feminine as well as the masculine fashion? How do they dress?

A: The space people do not allow their egos to control them. So they know nothing of the whims of fashion, which are the results of egoism, and of the exploitation, by smart business men, of the materialistic attitude of man.

They have the clothes they need, according to the time of the year and to the job. In their leisure time they usually wear a dress much like that which we know to be used in India. If we turned up in the everyday life of a street on Venus, we would hardly notice much difference from the ordinary life in the streets of one of our cities, as far as the clothes are concerned.

Q: What is the normal size of a family? Do they take a moral view of the size of the family? How do they regard the problem of illegitimate children?

A: The size of a family may vary, just as it does on Earth, but the average is three or four children. However I've seen a married couple with eighteen children!

The size of a family is not regarded as a subject of ethical evaluation. - On the contrary! Bear in mind their greater knowledge of the actual state of affairs. - That applies to illegitimate children as well. All children are equally honoured, because they realize that a child is a divine being, regardless of the circumstances under which it is born. They love and honour all children so much, that a child might be adopted by any family without experiencing less love than with its parents.

Q: How is their view of death when it's a natural death? And how is it when the death is caused by an accident?

A: They know that life is eternal, and they know that no matter how they die, they will go on in a new existence a few seconds later. They are always prepared to die, and they know it's important to die properly. When death draws near they are ready to enter the new existence in good spirits.

Q: How do they treat the corpse? Are they using crematories, cemeteries? Is there any dispute as to the pros and cons of burial and cremation?

A: The cells of the dead body must be decomposed, and preferably as soon as possible – we, too, know that.

In case of interment it takes a long time for the cells to decompose and be usable again.

On the other planets they decompose the dead body by a process which makes it »vanish« in a few seconds. They break up the molecules with high-frequency oscillations! The dead body will then return to the dust like a raindrop falling into the sea – it will join the unity.

Q: How many meals a day do they have, and what do they eat?

A: Usually they have two meals a day, and they consume enough to keep body and soul together.

Q: Do they experience seasons like those we have on Earth? How are they reflected in art and in the human mind?

A: All planets have seasons, which influence people harmoniously – they do not accept any other influence. Art profits by this fact.

Q: When the dead body has become ashes, could the very same atoms then be used for any purpose, or are they used for a particular purpose?

A: Just as the raindrop falling into the sea becomes part of the sea and may be assimilated anywhere, the atoms of a decomposed body may be assimilated anywhere, by »anything« – not by some specific thing!

Q: Are all inhabitants on Venus, Mars and Saturn entitled to – and do they get a chance of – travelling by saucer and space ship? If so, what is the purpose of such travels? And are they admitted to all rooms on the great mother ships while travelling?

A: The space people know that they'll never finish learning, and you might say that they go to school every day their whole life through.

Everybody travels in space once a year, for the purpose of education. Out there, watching the creating powers in action, they learn what nobody on the planet would be able to teach them. Usually they go to another solar system. They are allowed to move freely everywhere aboard the space ships – but the misplaced curiosity we know so well is not to be found.

Q: When may the interviewer get an opportunity to shake hands with a space man, and be met with the hearty kindness and intuitive understanding which Adamski has experienced?

A: If you grasp an uninsulated live electric wire without protecting your hands, you will feel the full strength of the current. But if you put on insulating gloves you will feel nothing.

Many people have shaken hands with space people without realizing it, the fact being that they were not able to register it. There is a saying that you can't see the wood for the trees.

The space people look like ordinary people, and you can recognize them only by their »personality«. So if you want to know when you meet a space man, you must discard what prevents you from recognizing. Telepathy may here be your most useful help.

Q: How long does it take the space people to travel from one planet to another within our solar system? How many planets do they visit, and are there some among them which we haven't yet discovered?

A: There is continuous communication between the eleven other planets, which together with Earth form a unit in what we call our solar system. Our scientists know eleven out of the twelve – they will probably find the last one too.

Besides that they visit a few other solar systems!

What is time? An idea – which you will guess when I tell you that I've been on a trip to Venus that took 12 hours, while a trip to Saturn last year took only 9 hours in spite of the far greater distance.

Q: In which respects have the space people rendered direct assistance in the practical life to people on Earth? Adamski refers to a planter who, through him, was assisted in the prevention of frost damages to an orange plantation.

A: I have never said a thing like that – it's a hoax concocted by George van Tassel and later attributed to me.

They have been of assistance several times. Let me tell about two cases in which they have cured very sick people.

In one case a disabled pilot was sitting paralysed in his invalid chair. Within 3 months of my delivering his request for help to the space men he was fully restored. After that he applied to the space people for help on behalf of a girl of six who could neither walk, nor see, nor talk. Six months later she was as normal as any normal child of her age.

Q: Could the principle of propulsion used in the saucers make our dreams come true – the well-known dreams of a real »Volkswagen«, and of unlimited possibilities of free travels for everybody?

A: Should our knowledge of that principle become a reality, it would no doubt mean a revolution of traffic! The energy being free, it's also obvious that the prices of future cars will be on a scale quite different from the present.

Q: Are we visited only by highly qualified scientists, research-workers and engineers, or are representatives of other trades also to be found in the crew of a saucer?

A: The crew is usually a group of scientists (male or female). Those who *operate* on Earth are usually scientists and technicians, but of late others have arrived. They are experts in various fields. For instance a group may be trained to watch the political development behind the iron curtain! Or they may infiltrate certain areas! We would probably get nearest to the truth by regarding these as a sort of »spies«.

Q: If you got to Venus, could you then see the house where Jesus lived after his ascension from Earth? Could you even meet his descendants or relatives?

A: No! Not if we follow the ordinary way of thinking! They wouldn't know the name Jesus. If he were still living there they would be able to find him, if instead of the name you mentioned his deeds – or, still better, if you knew his frequency, which follows him for ever! In case you found him, you would probably also be able to find the first house in which he lived after his return!

Everybody has got an individual frequency, which follows him for ever.

Q: How about photographs from the planets, and of the interior of mother ships and saucers?

A: I know of one case only in which a film was not completely or partly spoiled. It was a film that the space people brought to Venus, exposed and brought back to Earth.

The film, which was developed in California, was handed over to the military.

Usually the force field in a space craft will spoil a film.

Q: When will the outside world consider Earth ready for direct communication with the other planets, so that interplanetary travels may become as common as travels from country to country and from continent to continent are now?

A: It doesn't depend on our planetary friends – it depends on us.

We must establish the contact – not work against it. We will be ready to start when we have parted with all things that oppose the interplanetary community! Consequently it is important that the majority learns the truth – no less and no more about the actual facts. In the end the attitude of the masses must decide.

Q: Are pet animals like dogs, cats, goldfish, cage birds, etc., kept on the planets?

A: No, not in the way we are familiar with. Bear in mind that the relations between human beings and animals are quite different from conditions on Earth. Man and animal are at peace with each other, and they are on more intimate terms than we are used to.

Q: Who are constructing the saucers and the gigantic mother ships, and where are they built? Who owns them? How are they built? What is public property on the planets, and what is private property? Do they pay taxes, customs duties, licence fees?

A: As I've said before money does not exist, so taxes, duties, etc., are not imposed!

Everything is common property, administered by a government or a council, but each individual will only be free to dispose of what he needs.

Space ships and other »articles for use« are manufactured by the government, but it wouldn't be correct to say that they are government property – they are common property of the inhabitants of the planet, and in consequence of the whole community.

Saucers and mother ships can be made on all planets, but Mars has got a sort of licence for the production. The other planets are then »paying« in minerals to prevent Mars from exhaustion.

George Adamski and Erling Jensen, leader of the SUFOI report centre, watching the Kings Guard

Q: Where has the crew of »Thresher«, the sunken submarine, been placed in the cosmic order of development?

A: Well, in accordance with previous statements we know this much:

A few seconds after the death each member of the crew has started a »new« existence. For some of them death was final – they had got exactly as far as was destined. They go on to the next, or rather to another stage in the process of evolution.

Those who were in the middle of a phase must commence again – they go on from where they left off. That means that they must now learn what they didn't learn before they were killed. Some may be completed – then they can go on to another stage on the road onward, be born to live just a few hours, weeks or months, some may live for years. They must live until the individual phase has been completed upwards.

Q: Some space people have been killed in accidents while working on Earth.

How do the atoms of their bodies unite with the atoms of Earth? After all they do not come from Earth. And vice versa: suppose we got to another planet and were killed there?

A: Let us once again use the metaphor of the raindrop falling back into the sea. It becomes part of the ocean and may now go anywhere – this would also apply to a raindrop falling from a neighbour planet into an ocean on Earth. It would be part of the unity and still keep its characteristics! The atoms of the body likewise!

Q: Do they practice marriage on other planets?

A: Not marriage as we know it. However, when man and woman have chosen each other for life, then it normally means for life – they do not often make the mistakes we do, and it never results in quarrels and conflicts in the marriage. They honour and respect each other, and the children are born in love and to be loved.

Q: Do they use artificial insemination, in the way we know about, to get children?

A: Of course not. By acting so they would deprive the child of something valuable on its way onward.

At the moment of conception mother, father and child are united with the Cosmic Creator in a mood of love. Artificial insemination can not bring that about.

Q: I should like to hear your construction of – and opinion on – the following lines written by a Danish poet: »A strong and healthy vice to which you devote yourself fully, holds more truth and benefit than a half-hearted virtue«.

A: In a general way of speaking: we must take the golden mean!

That applies to all matters in life, everywhere in Cosmos. Mind the law of cause and effect! Extremes may do harm.

However, fairness and frankness in preference to deceit!

Q: If man is to survive on Earth he must attain a higher stage of development. He must leave behind his inclination to fight and suppress his neighbour, or get rid of his fear of that neighbour (which comes from an instinctive realization of his own greed and

ambition). I know perfectly well that it's a matter of controlling one's ego, but the community may in this matter be of great assistance to its members. (In a community of killers, if a thing like that was imaginable, nobody would dare to be the first to stop killing, because it would mean his own death – provided that the killers didn't confine themselves to killing people outside the community.)

On Earth we've had many kinds of communities, none of them very successful, and as far as I'm able to judge, neither of the two for the present dominating systems, capitalism and communism, has much chance of finding the proper solution.

I think we need a third and better alternative – preferably not a system, because, I believe, any real Utopia must be a community built on good intentions instead of dogmas. But for the time being the »good intentions« are scattered and disorganized, working through different parties, and turning any progress into nothing by opposing each other. We can't even make them co-operate by telling them to love their neighbours – to put it bluntly: we are not sufficiently advanced, and I'll be damned if we can do anything about it!

However, our neighbours on the other planets must have suffered the same troubles ages ago, before reaching their present stage. I don't think that it'll do us any good to imitate their solutions, but still some practical advice concerning ways and means used out there, might bring about new and profitable ideas.

So I ask: Can you give some earth-bound (excuse the pun), practical advice – of a kind that could make people listen, and not just make them turn their backs on you thinking, »By Jove, there's another fool!«?

I think the problem is the more important, as I've got the impression that any time someone may stumble upon a source of »free energy«. That would (excuse me) make a hell of a revolution in society – and a sudden one at that! I have tried to visualize the state of affairs resulting from someone letting loose free energy in our modern world, and I do definitely not like the things that may happen. It might in fact prove as fatal to humanity as a minor nuclear war. The basis of our society is the trade in energy, whether it is nuclear energy or the strength of human muscles. The entire structure of society might collapse with an enormous crash – and we would have nothing better with which to replace it.

That's why I should like some information on the subject. Furthermore I want to hear your opinion on the various movements against atomic weapons, your personal prognosis for the rest of this decen-

nium, and how your plans for a college in Mexico are getting on.

A: Don't be so afraid that the free energy will spoil everything for the world. It will not come like a bolt from the blue – such things don't happen anymore!

When the free energy becomes a reality it'll first be in the military and other such institutions, where its primary use will be in the field of space research.

When thorough tests have been carried out and we have become familiar with the »new energy«, it will in time come into use everywhere – by degrees, and under control. We can then get rid of the cars and aeroplanes we know today – and of a number of disorders caused directly and indirectly by these means of transport.

Meanwhile all people will get in closer contact with each other – we are, indeed, already on the way – and a new era of mutual understanding will commence.

The Soviet communism can't carry on in the old manner, if scientific and technic progress is still to be made in the U.S.S.R. Things don't agree! The rising generation of independently-thinking Soviet technicians and scientists can't help realizing what is actually going on outside the iron curtain!

In former days one or two philosophers did all the thinking of the world – now we are in a fair way to think, all of us! If everybody is thinking, misunderstandings and disagreements will gradually disappear, and understanding and charity will be the guiding force to man.

The nuclear tests endanger our future existence – we all agree on that – but until now nobody has been able to alter the attitude of the Great Powers to the continuation of the tests.

It's no good to organize demonstrations against atom bombs, to deliver memoranda at the embassies, etc., as we see it practiced. Theory is one thing, practice another.

The years ahead will be decisive – and the next ten are the most critical! If we get past 1970 unhurt, I suppose we have overcome the worst obstacles on our way towards the new era!

George Adamski with members of the SUFOI youth studygroup from Kolding and the leaders mrs. and mr. Dybkær, senior teachers from Kolding
