

QUESTIONS AND ANSWERS FROM
PRIVATE MEETINGS IN DENMARK

Transcribed from the Tape

Q: Why are the big radiotelescopes only pointed into outer space and not into our own solar system. We have recieved coded signals – like messages from outside. But there must be more to find in our solar system?

A: Because the big telescopes are not built for short distance but for long distance. Their purposes are interstellar. They are too powerful on short distance. However, we have picked up messages in code-system from nealy every planet in our system. But we do not let it out to the public. They are building a radio-telescope in Virginia, but they have even picked up signals without radiotelescopes on X-ray special wave-lenght at the University of Arizona. I have that tape home. The codes have been dechifered and we have even exchanged information by that means. They were picked up by an amateur, who informed the government. They gave him better equipment and he still works at the University picking up all sorts of messages from our own system. These messages never go to the public, but once the Navy publiced, they had received messages on instruments in Washington DC

Q: Isn't it more or less inconsistency, that the space people lately has been very reserved with informations about the propulsion of the spaceships, when they already at your first contact in the descert gave you the plates with diagrams on the propulsion? (The question was asked in danish. It had no relationship to the previous question. Here is GA's answer which came before any translation was made).

A: We take van den Bergs case. He do, what he is supposed to do. We can have the free energy but it will not be used in a negative way. For instance, he could comes to Mexico and develope it there. They will never use it wrong. It would then probably be used in frigidaires and so on long before it would be used in automobiles or by the military. – They will not give the information for instance to the University of Michigan. They tried to dechiffer it and got all fouled up and got nowhere. Yet van den Berg did dechiffer it.

Q: But how was van den Berg supposed to hide his information for instance for the military, when the only thing they had to do, was to buy a frigidaire?

A: No, no they couldn't do that, because there is a sealed unit in it. You see, they have to unseal it to find the secret. If they do that, it will go to pieces and they will never find out. This has happened before. When Frank Scully wrote »The Secret behind the Flying Saucer«, well the secret was there. You see, when they broke open the ship, they did not know what to touch, so they touched everything. As soon as they broke open this one thing, the secret was gone and that was it. You see, at Wright Field, Dayton Ohio, we have 20 ships that cracked up. Anyone of those ships could reveal the secret, but none of them did. Besides the space peoples are working at our laboratories. They know what to do but they do not give the secret either. The reason is for one thing: They give you the idea and you will have to work it out. You see, this is the only way, you get an education. Some people say: Why don't they give us a ship? Well, they could – and probably speed up our building. At present time it would be for military purpose. That would do no good.

Q: Please tell us more about the principles for the energy used in the space ships.

A: Well we had the secret ourselves in the early days and by the way the crystalset was an example of something, working on free power. There was no power at all, music and voice came through clear. No static. We hooked on the vacuumtube and the house power end then – static. But we had it then in a small way, see?

Had we followed it up, we had had it to-day. I myself have developed free power in my lab. All I have to do, is to go on farther and I would have it. And I could right there, because I know what to do. But I know what would happen and I would only add to the suffering of man-kind. – Many of the inventions we are searching for are already there, but the patents have been bought by big companies and the inventions won't be used before it will pay for these companies – or when they are forced to let them out. For instance, the wire-recorder was invented and patented in 1890, but not used until world war two. I will tell you people, that we have had a machine since 1954, used at Bell-View Hospital, New York. I saw that machine myself together with mr. Green from NBC, the president of the hospital took me over and showed it to

me. If you broke an arm, or a leg, you could happen to have to cut open to get into the bone to put in silver plates for example. Well, you see in the body everything is made out of molecules which lie together negative/positive, negative/positive. You put that ray in there and you separate the negative and positive molecules and where the separation takes place, there is a vacancy of space. So they get into the bone, place it in the proper position and shoot another ray and weld it together again. No pain. No blood-lash. No cutting. — Such a machine could be sold for a hundred dollars a piece only. In five years you could destroy all sickness on Earth. If I for instance had such a machine, I would immediately feel 15 years younger. Five minutes 3 times a week and you would never grow ill and what you already got of diseases, would be gone within a month time. That machine was given to us in 1953 by the spacepeople and built by us in 1954. But we don't know of it, because then the doctors would have no business.

Wherever there is a dollar, there is trouble. — By the way: I very often get letters from people asking, why the spacepeople do not give us a machine to free us from cancer. As you see, they already did, but it was never given to the public and they use it at the Bell-View Hospital on a few guinea-pigs, that is all.

The way the machine work is by means of a high frequency, invisible ray, which separate the molecules so that only space remains. We got a lot of things from the space-people. For instance I talked to an admiral and made a very accurate drawing of a mothership to him. His department made a six foot model, which worked. In fact we could have been in space now. I talked to him later on and asked him, why they did not build the ship and as I know that almost every known metal was used in this mothership, it could only be the fuel-companies, who had interfered. By the way: This mothership is made with two walls, like two ships built in each other. We have a negative field operating as radiation. We call it field-force from the ship to repel any debris, that might come against it, a meteorite or something like that. Because all debris in space is negative. And negative repels the negative. The second wall in the ship is for the positive power. The center where the people are is neutral. They are not affected by any radiation then.

Q: But how do they really hook on these huge electrical powers needed to build up such a strong force-field?

A: Well, you live in sea of electricity. You are inhaling it. Look, I'm rubbing my comb. You see that is the sort of electricity you ought to have, not the one which make your lamp light. Static

electricity picks up everything, while your electro-magnetism only pick up certain things.

I will go back to the crystal-set. It used quite a lot of power to get the microphone vibrate very fast. It came out of nowhere. Here is a secret, then you can work on it yourself. There will have to be a fracture in it. For instance in a transistor there is a certain fracture and that's what produces the power. It is the same in the crystal. There will have to be a fracture, so that the power can float between the two halves. The only thing to do then is to keep the power going. Spacepeople make mistakes like we do. They did once before by letting the Atlanteans have the key to the power and they bursted themselves out of this Earth. We might do it to-day with atomic-power.

Q: Have the space-people used the atomic power?

A: The ship which blew up over Sibiria, was a ship which went out of order. The bible tells us of a city, which blew up. That was a ship too, that went out of order and they could do nothing about it. Now, think when your atomic-bomb explodes. It starts, when the radiation comes in contact with the metal, which is an enemy to it. It ignites it, see? The »Tresher« for instance, or spacecraft the same way, got those metals in there. If radiation hits that metal, anywhere, it will blow it up. That could have happened with »Tresher« as we have barrels with debris floating in the ocean. It sinks to a certain depth where it keeps floating around due to the pressure. The radiation from the barrels could have hit the submarine and then the equipment in the bottles (they call them bottles, where they have the energy) got together and what happened: The metal just blew up. In other words it became an atomic bomb. I don't know, if that is what happened, but it could be. I can give you an example of how it works: Take a battery. You have two zincplates or other kind of plates with liquid between. And the action of these two plates through the liquid produces the power. Well, that is about the same thing in an atomic bomb, when it explodes. It is an action on a metal that ignites the works – and there she goes. See?

We are very close to the free power. We have found two metals, which fight each other, when put together, and produce electricity. It is not public yet, as it is in process of research. Top secret. They are small units now but can be produced big so that they can give any amount of power. Really they found so many discoveries the last few years that if put in production, half of the Earth's population would not need working. Therefore they are kept away, otherwise nobody would have money to buy anything.

Q: But can they keep these discoveries away forever? And what do they do on other planets?

A: Well, in any case the evolution of machines will make the people operate only a few machines sometime in the future. These machines will produce everything needed. But as people have got no money to buy the products, you will have to find a new system. On other planets they produce for use – not for profit. They therefore have no money in their co-operative system. We will probably have to do the same thing. That will be good – and be quality. However it will surely not come, before we produce our own spacecraft and travel to other planets and see their good system.

Q: How long time will the Earth's governments be able to keep the knowledge of the flying saucers away from the public?

A: They won't be able to keep the secret for very long. I have been with the government, and here are their plans: We may shoot up a few more astronauts in the traditional way. A ship is under construction, which can carry two men and two women to Venus. Russia is going to hit Mars. Both countries are working in the same field. When this takes place, they are going to televise it from the moment of take off, until they are on Venus and back again and the whole world will be watching. That is when the people want the whole world converted. According to the plans this should take place around 1970.

No government deny spacepeople, because they all know about them, as they deal with them daily. Since the saucers came on the scene, all american presidents have met spacepeople, face to face. When on my trip around the world in 1959 I had an intermediate landing in Karachi, Pakistan. The officials came and met me on the plane during my three hours stay. They said to me: »We can't understand you people, why you keep it so secret. The ships come in here, like you come in on this earthy ship. And we meet them, sit down and talk and sometime we have a good banquet«. So you see, it is not the same all over the world. And it is nothing new, as they have been here since ancient times, teaching and adding to human developments. Now we hooked on to atomic power and are able to destroy each other. Since ancient times wars have occurred due to bad economy. As the worlds economy is very bad now, we are in danger. Therefore we have to transfer the production to building of spacecraft, as this is taking a lot of money and a lot of time and knowledge. Maybe it would take a hundred years to build 100 big ships. All the people would work without fighting – but learning.

THAT is a programme given to us by the spacepeople and that is the programme, that the space-programme is established on.

Q: Do the spacepeople use astrology?

A: They do not use such things as astrology, fortunetelling, spiritism or any of these things. When God made man, he gave him dominion over air, water and everything, that is when he live as he ought to live. We do not, that is why we want such kind of support, because we are weak and dont have confidence in ourselves – nor the creator.

Q: How does it feel to be on another planet?

A: Well, no different from being in Denmark. People are the same wherever you go. It is the same with the customs, habits and the air is not much different. People on other planets are coloured too, just like you find it here. – Look, when thinking about all these troubles you find in Alabama, I think people are crazy. Because that coloured man they are opposing, did not use to be coloured. Somebody made a choice for him. And that »somebody« they usually call God. So why do they critisize God, because a man is black? Next time you live you may be coloured, see? Orthon himself is dark. Not as dark as a negroe, but darker than you and me.

I once talked to a negroe asking him, why he didnt go to the white mans church. »Because he dont want me there«, he said. Well, did you ever ask him, what he (the white man) would do, when he goes to heaven. The black man goes to heaven too, and there is only one heaven you know. – Yes, we do a lot of silly things here. For instance you always see religions which makes divisions, where God never does. A priest once asked me, when I last time went to church. Well, it's several years ago. Then you ought to go to a church, the priest said. Which one, I asked, because they all say, that they are right and if you belong to another religion, you will go to hell and not to heaven. They all claim we are children of one God, but still they condemn each other. So you tell me, which church I am going to belong to. And of course the priest could not answer. – No the spacepeople dont have divisions. They look at the whole thing as a unit and a necessity. The rain have to fall and the seasons have to change. Thats Gods work to keep life going.

Q: Is there any special way, that you can control your progress in mental telepathy?

A: Yes, for instance there is one easy and funny way. You just go to a darkroom and cut some photographic paper into small squares, small enough to be kept within your hands. Then you think of a certain thing, for instance a chair. As soon as you have formed a good picture in your mind, the picture will be transferred to the photographic paper. Only one second is necessary, but in the beginning you may use a lot longer time. It is also very possible at the beginning, that you only make lines on the paper. But soon you will be able to make a picture.

Q: Why do space-people have a longer lifespan than earth-people?

A: Because they don't have so many worries as we have. Food distribution is much more even. Money is not used and thus the food is not thought upon as a form of money, but as a work of man. Through all history people have been frightened and to have this their thoughts and minds also had to be frightened. Peoples hair have turned grey, because their minds have been in constant fear. If a man thinks in terms of drinking, he will be a drunkard, he same applies if he thinks of dancing, singing or anything else, he will do the things, that he thinks most about, because man is nothing but thought in action. The Creator, God or whoever he may be, had to have a thought, before he could create anything at all. And a thought is a pattern for a thing to be. If a man stops thinking, he is dead. Every thought that a man has or uses during the day, keeps him alive. A man with fine thoughts, will be a fine man. We have lost the art of thinking and we will have to learn it all over again. We can see as is shown by our scientist, that thinking, – that is positive new thinking – will lead us forward.

Q: What can you tell us about the forces or means of propulsion of the spacecraft?

A: Its electro-magnetic, which is the same force which keeps our planets and all the other planets moving. We also know, that when two charged clouds cross each others lines, they will give a discharged of electricity, which we see as a flash. We have got to harness that power, which is different from our magnetism. There is a great difference between the magnetism in space and our man-made magnetism. Even when we know how to use it, we will have to learn

how to change polarity in our ships, so that they don't just go crashing into the earth. You may ask, why don't the spacepeople tell us, but if they told us everything, then we would never learn, and we got to learn.

Q: What are the scout-craft charged with?

A: They are charged with energy, which the motherships have gathered from space. The mother-ship acts like a big battery, which gives a small charges to the scout-craft. The scout-craft will have to go back to the mothership, as they can't gather their own energy and have to have it from the mother-ship.

Q: What influence can the power from the space-ships have on the human body?

A: The force-field is ionised air and if you came into it, it would be like going into a very severe storm, and you could be destroyed. The radiation is so high, that the human body cannot take it. It is used to keep debris away from the ship and to stop it from overheating. It acts like an atmosphere around the ship.

Q: When a space-ship is in our atmosphere, will it move our gravity or space-force-fields?

A: No, no, it will move on our force of gravity, but it can neutralize this by reversing their own force. By doing this they are in harmony, so they won't be coming crushing down, that is, what we have to learn too. They change their polarity just as the difference between alternating and direct current.

Q: When they live so long, do they stay married to the same person for maybe several hundred years?

A: Most do, but not all, anymore than here, but when the separation takes place, there are never enemies on any side, they separate as good friends, — it is not as here, where often people separate as enemies, which is wrong. Marriage is not as here with a whole lot of paper and forms, but a pact between two people to live together. If, as sometimes happens, one of the parts has a mental progressing greater than the other, then due to unselfish reasons, they will make a mutual separation, as one partner will not try to hold the other one back, and will give him or her a chance to find a partner on the same mental level, so that both will benefit from each others company.

Q: You said, that we often slap the child, when he was trying to say something. Well what then can a child say, that can be new to us?

A: I can only answer this one way: I have got hundreds of letters from children in the 7-12 years group, and you would be amazed by the things they ask. They know that it is no use to ask their parents, as they will slap them down. For example a nine-year old girl asked me this: I cannot accept a god that would watch me crying in hell for ever and ever. If the child had asked her parents this, she would have been slapped, and wouldn't have had any answer, but she decided to ask, who could possibly help her.

Q: What is hell and how did we come to use the word in the beginning?

A: It was used in the beginning as a threat to create fear of the minds of those, who wouldn't behave properly. The only hell there has ever been or will ever be, is the hell, that man creates himself. Here on earth we have many things, which can be considered heaven, but we have also many things, which are like hell. Such as the atomic bomb with its radiation, which causes people to die slowly, as they walk along the street, constant threat of hunger, pain brought on by worry or by the faults of society, thats also hell. A criminal, that has properly been a good man, but because he didn't have enough to live on, he stole, and then had to run for the police, thats also hell. It says in the bible, that there will be a heaven on earth and I think, that we are getting nearer to that, not because of our books, but because of our progression in space. We will learn other ways of governing better ways of life. We will learn, that the laws support all life equally and we will begin to use these in our society, because that will be the natural way of living.

Q: Can you tell us, why people in highly civilized nations have been attacked and persecuted?

A: People who had opinions which didn't fit in the times and present way of living, have always been persecuted, f. eks. take Galileo. He had a different opinion as to faith and was persecuted his entire life, but to-day we know, he was right. Some people are persecuted generation after generation, because the new generation just keeps the ball rolling without really knowing the first reason. Often there was no reason at all, just some rumour started, there is always two sides to a story, and never even looked up the other side, and this goes for not only one race or one person but for all

racess and all people. The same things goes on for the coloured races to-day. And yet we know that there are more coloured people than there are white, God must have loved the coloured people more, since he made more of them. (This example is partly a joke).

Q: If a child was left to grow up by his own development, would he grow up according to a certain plan, or would he be a product of his surroundings?

A: The curiosity of a mind gives chances for it to grow into something really big, because he has got so many things to look at and investigate, that if he was free to do so, he would probably turn out a lot better than most of us smart men.

Q: Can you tell us, what causes us to think, that we have been to a certain place before, or witnessed a certain thing, when we know, that to the best of our ability, we have never been there before, or been in a like situation? Is it our mind, that has travelled and witnessed these things?

A: Not exately. Your conscience is aware of everything, and this will convey facts to the mind, which can accept them or reject them. If the mind is very critical and wants concrete evidence, we will reject it, but if the mind is willing to learn, openminded we call it, it will begin to think and reason logically and work it out until it becomes a fact for it. Life itself never dies, and goes through varies experiences, which the mind never forgets, but because it is not concrete, the mind will often reject it and call it for a dream or fancy. How will you account for an infant prodigy, who can play an instrument or such like, when it has never been to school and never learned how. Surely you can never do something, which you have not experienced, you have to experience, somewhere, somehow. The real self has experienced this before and tries to convey it to its mind.

Q: What is re-incarnation?

A: Re-incarnation is a word or a label, that eastern philosophers uses, the western philosophers use resurrection, which means the same thing. It all means returning, just as nature after the winter returns with spring from a long sleep. Just as with nature, so it is with you, as you are also a part of nature. Just as stale water evaporates and condenses in clouds to fall again after condensation as purified water. Science states, that matter is indestructable. That is a natural law, as everything returns. Then surely the intelligence which

governs all of this like a law, must proceed it, then we must admit, that the intelligence goes on eternally too. As you can't destroy a cause, then the effect cannot be destroyed, as an effect comes from a cause.

Q: Can you give us an explanation to, what happens to the souls of people, who die during wartime or under large natural catastrophies?

A: We have a good example of that to-day. A lot of men were killed during the war, with hate in their minds. What have we got? We have got kids all over the world to-day, youngsters, that have already returned. They may not remember the war, they may not remember anything. Though if for instance a man and wife had an argument before they go to-bed and sleep, they will wake up in the morning, with the same feelings in their hearts and probably not do any of the small things for each other, such as make tea or coffee etc. because of the bitterness, that still hangs with them. When persons are killed like that, so it is the last thought, they had, with that they wake up, and the evidence is outstanding. We have young people who form gangs and beat up, and perhaps even kill innocent people such as old men, women and even children. That is a product of the mind, which was killed in hate. Because in hate it died, and in hate it comes back.

Q: In case of an earthquake, where many people die at the same time, are they all reborn at the same time?

A: Yes, but they are not all born in the same place. If 10.000 people die, many, probably half of them are evolved enough to be born again on an other planet, there is no waiting. All of this goes after a set law. This law is not made by man, but but the Creator.

Q: What can you tell about the mexican chauffeur's story, which has been published in Germany?

A: The truth is that he came driving in his car, the motor stopped and he got out to repair it. A »saucer« (which was probably the reason for the motor stopping) landed near him, and the pilots got out and asked, if they could help him. Later the saucer started and the man has probably never been contacted again. The complete »journey« he discribes is not written by him, but by a journalist in USA, and it is all made up and flavoured with details from another mexican's journey to another planet, which has really taken place.

Q: Have you at any time supported this story?

A: I have supported the above mentioned landing with contact, but never the story about the journey to another planet.

Q: Which planets have you yourself visited until to day?

A: I have as you know been to Saturn, and also to Venus, but that is not long ago.

Q: How close are we to publication of the UFO matters from official side?

A: We have at the most seven years; if something does not happen before then, we have again passed away the right moment, but in my opinion the publication will come within the next three years (which means before the end of 1966) providing somebody does not push the wrong button before then. You will already notice different things in several matters, if you keep your eyes open. For instance, you will discover that the catholic church will open the door a little bit, when the conceal ends in the autumn. (This was said before Pope Johannes 23. died, and before the new pope was chosen). Also in political matters you will see strange thing happening.

Q: How many space people are working on the Earth to day?

A: I do not know. There were 10.000 some years ago, but I do not know how many there are now.

Q: What are all those space people doing?

A: Some work as reporters in countries all over the world, they collect the strings and give reports to a »Headquarter« in USA about the opinion all over the world, about what press and TV says, what the UFO-organisations all over the world are doing, and how the general opinion is in the different countries. Others have leading jobs in parliaments and other important places, where they partly report and partly advise. But most of them are working in factories and laboratories all over the world helping the scientists, in most cases in such a way, that these do not know, that it is space people, that are helping them. As you see they are all occupied in important jobs and that is why they have no time for playing circus just to satisfy a few person's curiosity.

Q: How do the space people get their identity?

A: One way is to put them in a job, I have for instance dealt with a restaurant, where we employed space people – they could

therefore use it firstly as a »meeting place« and secondly they got recommendations and identification cards from the restaurant. Then we open a bank account for them, preferably a check account. They become member of clubs, get driving licenses and in this way they little by little get identification cards and references they can refer to. This is enough for shorter stays.

Q: Can you give us an example of what telepathy is and what it can do for us?

A: Yes, imagine that your brain is something like the crystal in an old crystal-wireless. The thing that makes the vibrations stronger that are caught by the crystal, are very fine splits in the crystal. The vibration is »caught« between the two walls of the split and thrown from one wall to the other and so on and in this way the vibrations are made stronger. Your telepathy works approximately the same way, you just have to understand how it works and what telepathy is, then all the vibrations you receive from »The Cosmic Intelligence« will be caught in the splits in your own private crystal, made stronger and thereby conscious.

Q: Which way is the best, when we want to study telepathy?

A: Read the book carefully, study it in your groups, discuss the different chapters. Try to understand what it is all about and how it all fits together. Practice telepathy often to train your dull canals of feeling, and to see the advances you make«.

Q: Will UFO groups or single persons also be contacted?

A: In case it becomes necessary – yes, in that case it will come as an urge to go to a certain place at a certain time. It does not come like »voices« saying something, neither in your head nor from anywhere else. You often hear about that, but that is all false.

Q: How far back in time can we follow the flying saucers according to your knowledge?

A: We have notes in India, which are 15.000 years old, telling about flying saucers. A group in India, who are studying at one of the universities under dr. Mitou, is working with these old notes, and they compare to all the recent happenings such as my own experiences, and every year on the 20th of November they celebrate my first meeting with spacepeople as a sign of the contact between these old Indian UFO reports and all the things, that are happening to-day. How can our scientists deny that flying saucers exist, when we known, that their work is based on historical facts.

Q: What influence do all the copper needles have, that the Americans have sent into space?

A: A year ago they sent up the first portion, but they were all lost, and were not found again. Now they have sent up a new portion, and I have not had an opportunity of hearing further details about them, but in any case they are too small to cause any trouble at all for the space people, as the spacecrafts force field will reject these particles just as the case was with major Glenns journey in space. The particles he saw, which have been said to be paint, ice crystals and such like, would, if that had been the case, have hit the Mercury cabin, but the particles went *away* from the window according to Major Glenn, because they were rejected from the Mercury cabin.

I – like all other americans – have had the opportunity of seeing Glenns films on television, where we saw his camera as well as the film, he had taken, and at the bottom of the lefthand corner we saw a space ship, no different from the ones I have got on my photos. The commentor did not mention anything about it. This tells, that Glenn saw two different things: The small luminous particles, which I described in my book: »Inside the Space Ships« as being positively loaded particles, which fill the complete universe, and little discs, which he called »fire balls« in opposition to the earlier mentioned »fire Flies«. The big mother ship was lying several miles further out, but had sent out the discs to follow Glenns space travel in all details. In case something unforeseen should have happened, the space ship would have interfered and saved Glenn and who else was in the cabin. We would though never have heard anything about this, but we would have been told, that we had lost a man i space.

These small copper needles will not hinder our own space experiments in any way either, because they are too small. What they are really trying to find out with thes space experiment is hard to say, because they do not say very much, but they have said, that it has to do with space communication.

But there is another danger for our future rockets and astronauts, because at the moment there are more than five hundred parts of earlier shootings out there both in the form of rockets and satellites, and some of these pieces have the size of an ordinary dining room. Some of them will soon fall down and burn up in our atmosphere, but others will keep on orbiting for hundreds of years. There is a risk, that one of our space ships could collide with one of

these pieces, and we have no idea, as to how we could clean space from all this debris. We do not have the magnetic power, which nature has and therefore no way of pulling them down. But it is possible, that due to natural magnetic forces, some of these pieces will gather together into a larger lump and this because of its mass will gather other pieces also meteors and such like and will become a small planet, which will either become a small moon or crash into the earth or the moon, in which case it will cause a catastrophe, the consequences of which can not be worked out.

Q: We have heard about car and aeroplane engines and such like, that have stopped, when they were near a flying saucer, what can you tell us about that?

A: We have an example where a helicopter was sent out to look for an object, that had gone down into American waters. This helicopter crashed into the water and sank, but all six people of the crew were saved and were later interviewed by television. They were asked, what had happened and they explained, that suddenly white smoke came from the exhaust, the engine stopped, and the helicopter fell down. When we think of this, we can find a very logical explanation to what happened. We know, that if you accelerate a car too much, it will give out a black smoke, if you burn oil it gives a black smoke, but if a lot of petrol is running to the motor, and the ignition fails, the pressure will cause a white smoke to come, so what happened really? The submerged object was an UFO, and the force field has caused the helicopters ignition to fail, whereby a white smoke was formed, and caused the crash.

Q: We have read about recent discoveries with regards to Atlantis. What can you tell us about this previous civilization?

A: The people of Atlantis just like the lemurian civilization, destroyed themselves with the misuse of atomic power, just as we could do, if we don't take care.

But there has been a race prior to them, known as the Triterians. You have probably seen pictures of half man half fish or half man half horse in greece mythology. This symbolizes these people as masters of the element, and they was. But with these people as like everything else, all goes in cycles, and earth also have its set-cycles. Earth lies on a special axis for a set time, and when the cycles in completed, it would take a twist or a turn to a new axis. This change can be very severe, and the people living in the worst areas would either have to get off the earth or move to another end. As

these people had their own spaceships, they got off, but peculiar as it may sound, some people and ships didn't manage to get away. At the end of the second world war, when we had the atomic bombs, I known, the American nation started looking for natural caves, as this fact had been published. While searching for these, wherever there has been a landslide, the slide was tested to see, if there was a solid background or if there had been a landslide over a natural cave. During this investigation I think they found something like seven different ships in seven different caves. They were perfectly preserved, but as soon as the cave was opened, they started to crumble, when they came into contact with the air.

In dead-valley in California they opened a cave and found radio-cooking-stoves and pottery, which was completely out of this world, as even our best artists can't make in such a beautiful design. Also there were some skeletons there of people, who were nine feet high, which means that, they were giants.

The pottery is still being examined, and the markings on them dichiphered and as soon as they are finished with this, the pottery, that was found, should be given out to public exhibiton, but so far they haven't done it yet.

This proves, that civilizations even greater than Atlantis or Lemuria existed before them on this earth. And all goes back to the Triterians, which was the only perfectly race, that we know of which has lived on this earth.

Q: Was the El-race inferior to the Triterians.

A: Inferior and inferior that's difficult to answer. At the moment we are inferior to some of the other races that have been on the earth before us. But if we progress at our present speed for about fifty years, we will in all probability be superior to even the Triterians, that is if we don't have a natural catastrophe, such as the earth changes the axis or an atomic war. Our greatest job is definitely the most difficult; in that we will have to establish our social equality.

Q: We show you here a picture of the moon, one of the pictures, taken by the Russians from the backside. Can you recognize any of the spots?

A: If you have a perfect picture of the moon, I could recognize it because a perfect picture would show straight lines, and you never find straight lines in nature. You will have a perfect straight line leading into the mountains, or what you call the crater, and dark

spots like a shadow. It all goes in there – its the highway, – it goes in to that, which is a tunnel, and if you follow it, you will come out of the other end. It goes on for hundreds of miles, and that is how we discovered highways on the moon. And I'll tell you, who discovered them first: U.S. Airforce.

I had a big picture, as we had the café in Palomar Gardens. I had it from Mac Donald Observatory in Texas. Many people looked at it, and one day airforce officials came up and said, that they were going to the big observatory to have photographs made of the moon. And just a day before that the Geographic Society was up and they told me the same thing and I asked, why they wanted to use a »48« lens, as they did not use a »200« on it. They said, that there were roads, highways and tunnels which they wanted to bring out more clearly. Then they began showing me on my own map with the help of a large magnifying glass, I have, roads and highways, which run for hundreds of miles in a deadstraight line, and then they run into the mountains and you see a shadow like that created by a tunnel and then by studing closer you can see the highway coming out of the other end thus showing conclusively, that they were tunnels. The same thing with the bridge on the moon. They saw one bridge and shortly afterwards another bridge, but this one vanished completely the next time they looked for it. I told them, that with a mothership that is a mile long, if something goes wrong with it, they land it between two mountain tops and if they want to move some of the larger machinery for repair, then they will take another mothership with the same length as the distance between the two mountains and land it across the summits, so that they can use this as a crane to lift the heavy machinery. This will give the appearance of a bridge, but as soon as they have repaired the other ship, they both leave, so your so-called bridge has gone.

Q: Can you tell us how long time passes between death and reincarnation? Can it be several years?

A: Only a few seconds. It can never be several years – always just a few seconds. Before you have really closed your eyes or exhaled your last breath, your soul is conceived in a new body. Sometimes people will so to speak wake up for a few seconds again just before they die and say, that they have seen beautiful things. This is because the consciousness is already leaving the mind, the consciousness knows all of this but as the mind was always too busy before, it never paid any attention, but as it is silent or dead so

to speak at the last moment, it can see those things and tell about them and then it gives up.

Q: Why don't the space people come out in the open and show themselves and talk to everybody?

A: They would be bigger fools, than we are. Lets take a case from 1956 or 1957 when Mendes Frances was the primeminister of France, and a ship landed there on the rails and some small men came out. It pulled off again from the rails and went over the timberlands where it seemed to land. A lot of people gathered over there with forks and guns to hunt for the space people, that they thought had landed there. But they did not find anybody but they managed to kill one of their own men in excitement.

In the United States a flying saucer landed near a river to collect water. They use water like we do, as they are human beings, like we are. Some minors saw them and they went to the sheriff to get permission to shoot these people, the next time they landed. Another time over Farmington in New Mexico in 1954, 500 ships appeared over Farmington all day long, they even picked up a farmer, they took him with them and many people saw them and said they were kidnapping him. They brought the farmer back two years later and his neighbours of course started asking him questions, but the space people had told him not to say anything, because it was too early yet. But he did to his family, and the family blabbed and soon the authorities came and locked him up. Over 500 ships, the prees and everything was there, but it did no good, it only caused a lot of trouble and panic situations and there are many other examples like these ones.

Q: Why do you always stop in hotels and not by your friends?

A: I will tell you why. Hotels are public places, anybody can walk into a hotel and look up a room, if he knows where the room is, knock on the door and come in. All my contacts on my trips in 1959 and also now take place in hotels. You see, nobody pays any attention to the people that come and go in a hotel or public places. They do not trust private homes, so that is why I always choose to stay in a hotel.

Q: We have heard about a farmer who was walking down his field and all of a sudden he disappeared. Can you tell us anything about this? Is it possible for space people to take people up without a spacecraft?

A: Yes, they could pick him up that way. I have had that experience. The farmer might be back already. He would not talk

and his wife would not talk. It is the same case as just mentioned about Farmington. The space people had told him not to tell anything.

A person can easily disappear and come back without being noticed, just as an American scientist, who was married, did. He came back after two years and worked as a stable boy somewhere completely different and he did not return to his wife and family and even though some people recognized him, including his wife, he denied and still does, his previous identity.

In the Kansas City affair I think you remember it, I had this experience to be lifted up into a space craft while the ship was hovering. It feels as if something is surrounding you like a transparent curtain or plastic curtain, yet you can't touch it and you don't see it and like a magnetic force it lifts you just like an elevator into the ship and they can do this from a thousand miles away if they want to, but usually it is only two to three hundred feet. You can take baggage and everything with you, as if you are standing on a platform even though you can't see it. This only works in the open nature and the person being lifted, is visible the whole time. Also they can push a person out as it would seem in free fall. You see him coming down, but he does not crash, everything is controlled.

George Adamski - loved hatred, laughed at personally indifferent
