

REPORT ABOUT ADAMSKI'S TRIP TO ANVERS

(Antwerp) MAY 1963

Transcribed from the tape.

Georgs Adamski's stay in Antwerp was too short to many of us. As you undoubtedly know an alteration in the programme was made at the last moment, George Adamski neither going to Germany nor to Finland. For that reason his stay in our town was precipitated, which caused a disorder in the time-table of the lectures.

In the course of two days we had to reorganize everything. If some of our friends, who have been requested to be present on Monday the 27th of May, have not been advised in due time, we hereby beg to apologize.

The lecture on the 21st of May was attended by an audience, whose obvious interest was proved by the asked questions.

George Adamski began with confirming his experiences and these of his published books in which he mentions his contacts with the space brothers. Our earth has recieved visits from the space. The arrival of the UFOs (the flying saucers) has given rise to the current space-programme, and this programme can save our civilization. Till now it has been so, that war was made, when finances grew poor. For the time being we are able to destroy our civilization by means of the arms at our disposal. Consequently it is no longer possible to make war. USA has spent 40 billion \$ on building and equipment of a special apparatus for space research. The presence of UFOs has forced all governments to deal with matters concerning space voyage. It is not so important to know from where the UFOs come as to know, **THAT THEY COME!**

Through guiding the financial policy of the governments into a peaceful exploration of the space we can make it possible for our children to escape the horrors of an atomic war.

We therefore ought to support this space programme with all our might, for doing so we help to further a solid economic basis, and wars will for ever vanish from the surface of the earth. The programme is so enormously extensive, that there always will be something new to learn. It will alter our life completely, of which our governments are quite well aware, and this is one of the reasons why the Kennedy-Kroutchev telephone connection was established.

Conditions of life on the other planets are different from ours thereby that the governments there doesn't work for gaining some advantage, but dedicate the efforts to the general well-being. Difference of treatment, and caste principle are unknown. They don't

work for gaining a personal profit, but for satisfying the neighbour's need. This was tried in U.S.A. in 1933, when after the exchange crash Roosevelt reopened the closed down factories only to cover the need of the population, not for the sake of profit.

If there wasn't anything called an opposition we could now have had a non-profit-system on the earth. On the other planets, goods are distributed according to need; here they are stored with a view to profit. – To the question: »Why isn't there published more about the contacts« – Adamski replied, that he »wasn't the only one who had been contacted. All major governments were contacted. When the truth about the other planets is known, this truth will influence science, finances, religion and politics«. From this it will be understood, that everything will take place gradually, which also was the opinion of the 40 cardinals, when Adamski delivered his lecture in Rome in 1959. The masses are afraid of, what they do not understand. We all remember, what happened after the transmission in 1938, a transmission dealing with invasion unto the earth and which Orson Welles had put in the programme resulting in several suicides. It is not possible on a sudden to alter the mentality, when it is the question of 3 billion human beings. It must be done slowly, and therefore the governments try to bring people up to not to give rise to panic. And the church on the other hand tries to combine the old ideas with the new ones concerning the space. Neither will it do, as a matter of course, to affect the great economic powers, where electricity and oil represent the most important investments.

As the space brothers are more developed, than we are, it is nothing to them to learn our languages. For that matter they employ the only language used by the creator communicating with the created. This language is based on telepathy, which express the received impressions. All natural kingdoms: the vegetable, the animal etc., employ telepathy. Only we have forgotten how to do it. It has no doubt happened to you, that you have had a feeling, that somebody was looking at you, and when you then turned, you have discovered, that there really was a person, whose look was directed towards you. The government of U.S.A., as well as other governments, see to that their astronauts are taught telepathy.

At all times space people have visited the earth, and George Adamski reminds in this connexion of certain Bible texts. In Genesis it is said: »The sons of God came down to earth and took on to them selves the daughters of men, and had children with them«. In the Bible and in the old writings are mentioned »Flying Vehicles« and »Vimanas«, to day called UFOs or flying saucers. The astronom-

ers tell us, that billions of planets exist, of which some are more beautiful and bigger than the earth. Isn't it marvellous to know, Adamski asks, that inhabitants of the earth one day will be able to visit them and that it will be possible for us to become acquainted with the kingdom of the creator! It may last very long, but we shall always have something new to learn. It is a grand idea on second thoughts. Now you will undoubtedly ask: How will it be possible for us to visit these planets because we cannot get there all of us? Jesus has said: »... death has come through a man ...« (Paulus first epistle to the Corinthians 15,21), and by that he meant, that God had not instituted the death, but that man himself is responsible for it. Consequently life must come through man, and when it is so life is eternal.

Without quoting the Bible I shall now, by help of the more recent discoveries of science, prove whether you are alive or not, when you have left the earth. It is an important question to everybody. There is a difference of opinion between the Christian religion, referring to resurrection, and the Hindu religion, as the Hindus believe in reincarnation. In fact the two religions preach the same thing.

Look round. Nature continually renews itself. This is not the work of man, but the creator's. All plant life rises again every year and leaves shoot forth anew; everything grows, but man does not see it (understood: the mental background). Just there you have the proof. As you are the highest realization of God's creative power, it is so simple, that you at least enjoy the same privilege as at tree or a blade of grass. You see, every day this is the resurrection you have in front of you. In other words: the spring. It is true, that some plants sleep for several months. Said in another way: God tries with all means to show us, that we have a future, and nevertheless we won't learn. Science has taught us about the material part of the body. Fell a tree and burn it. The carbonized remains, the ashes go into the ground and the smoke goes into the air as gas, but the original components can never be destroyed. The material may be different in the exterior, but the original components, determining the nature of the material, can never be annihilated. Science has already proved this. Consequently it is necessary, that there is a leading intelligence uniting the original components of the material into a connected whole, thus creating the different material forms of whatever kind. Accordingly we must assume, that a form of intelligence, or how you prefer to call it, constantly leads the original components into new material forms. If the original

components of the material have an eternal life, then decidedly the leading intelligence also must be eternal having existed previous to the original components of the form.

Science has proved this better than any clerical speech would be able to do it, and this is a final reply, which can be examined in the laboratories.

The Bible says: »Nothing is concealed, which shall not be revealed.« (Mattæus 10,26). We have now come to the days of the Revelations. If man wants to know his Father's kingdom, then this man, being the creator's son, will obtain this, as soon as he is ready for it. It is like a child being ready to understand. When you have explanations ready and are willing to give the child the knowledge, it wants so, that it can progress and understand. That is just what happens at this moment.

Life always will unfold, which is a beautiful thought and gives warning of a good future.

In 1975 space ships will travel between the planets. In California we are building a space ship, which in 1975 will be able to travel at a speed of 1 million miles an hour. This is a slow speed compared with future speeds. In this connection it occurs to me, that it will take 26 hours to come to Venus, and that my father 72 years ago used 13 weeks to come to United States of America.

Distance and speed are without importance, when man learns to control these. We must admit, that we live in the new world of a new era, and I think, it will be in the interest of everybody to acquire all possible knowledge.

George Adamski continued: Since the 24th of April I have delivered 32 lectures and answered more than 2.000 questions. Some of these questions as well as the answers will be revised and in form of a booklet by major H. C. Petersen be delivered to May Morlet, and all the material will be at your disposal. I think this documentation will be of the greatest benefit to you as it is of vital importance, that you are kept informed. You and your children will be living and have your living in relation to the new form of existence.

When the governments further the scientific investigations as much as they do, it is not without reason, and he who doesn't follow, will be without work in the years to come. It is not a question of changing religion. If you enrol at a college in order to become an engineer, you need no change of your faith. You only have to learn what happens and adjust your life in accordance with this. You will now have to adopt yourself to the nearest future, which will give you an existence more happy, than of the past. This programme must be said to be realistic and sensible.

The spiritism and all the »isms« shot up in connexion with the here described programme may have frightened you. The supporters of the »isms« only are opportunists seeing their own profit in people's thirst after different knowledges. No religion is involved in my programme, and this in itself is no religion but sooner a profound study of life. I shall myself found a school called »The School for Wisdom of Life«, and this will include science and philosophy.

The philosophy is the basis of your religion and science, and when you speak about philosophy, then it doesn't concern the religion but only facts and realities as well as the prospects for the future.

The realities, and that which follows, come to us through the work of science. Thus Mme Curie worked in her laboratory without exactly knowing what the result would be, but she just continued. Many mistakes have been made, but finally she detected radium. All science works in this way. It is based on certain fundamental facts and imagined possibilities, which we call theory. And the theory of to-day will to-morrow be facts, until new theories and new facts will appear. Incessantly we continue to learn, and therefore mankind ought to take an interest in this; it is for their own benefit. Not only will it serve the future, with which they will form a synthesis, but it will also develop their intelligence. As beautiful music delights the mind, so does knowledge. You are elevated, higher and higher; you will have the impression, that you have something to live for and that there is a future to aim at.

If you have been promised a voyage round the world, you will look forward to it and without knowing the day of departure, you will make a plan, which will become a reality. What you now are promised, is a voyage in cosmos.

The address was received with applause, and we thanked George Adamski for his statement attaching the wish, that they, who had understood the significance of it, would follow the indicated road.

We should like to thank Mr. W. Van Lekvijck for his assistance as interpreter. His translation was eminent in all respects.

THE ASSEMBLY FOR THE YOUNG THE 23 OF MAY

This day was dedicated to the youth. Adamski spoke again about the programme for the instruction, which was so indispensable to many people. The masses still were ignorant and afraid of the unknown. The example, about the alarm in 1938 in consequence of

an emission from O. Welles, was repeated. For that reason the masses ought to be informed by degrees. The youth ought to interest themselves for the space programme, which concerns their own welfare. Adamski has correctly realized the vital importance of this programme, for it is in a perfect unselfish way, that he devotes his efforts to it. Lately he has been asked to deliver a lecture for general information.

The speaker also mentioned the »fire-flies«, which he has seen in the space and which he has described in his book published in 1955. Then he asked the following question: »Has Glenn seen »fire-flies« in the space?« To this the young people answered in the affirmative. Adamski continued: »Would he have seen these »fire-flies«, if he had not been in the space«. Negative reply. And further: »How has it been possible for me to describe them 7 years before Glenn and in the same way as he? In order to know the »fire-flies« I must also have been in the space. Other things too, about which I have written in my book from 1955, have been confirmed by our satellites.«

Though the authorities know where the UFOs come from and also what they are, and though they have identified them, the public is not informed.

Adamski then spoke about the space brothers who in their everyday life let themselves be guided by their »religion«. They worship the invisible: The causal principle (the Creator). After this Adamski again spoke about politics, that simply did not exist, and again he maintained, that even if all did not think alike, then they melted into each other in common ways of thought directed towards the very same end: The common good. Discrimination did not exist, neither did castes.

Adamski resumed the question about telepathy. Every human being, he said, is born with telepathic power. All nature kingdoms: the animal kingdom, the vegetable kingdom etc. are able to make use of this means of communication which is life in the world of the forms, and life here is not dependent on man.

At first you will get an impression like presentiment, clear-sightedness etc. It has many names. Finally you will be mentally awake through the impressions which turn up. You will now find yourself in a condition, where you are impressionable, a condition where you are mentally conscious and where you will see the things round you in their spiritual light. The impressions will be there before the spirit will be able to catch them; they are active and exist independent of the spirit, but this has no life without consciousness.

An experiment you can make: Take a piece of negative i.e. not exposed photopaper in your hand. Now picture something to yourself, and this picture will then be transferred to the negative, not exposed paper. Don't expect a result at once. It requires practise. All these scientific trials take place at the higher schools. (It must be understood, that the negative paper is to be influenced, developed and fixed in a dark-room.).

It is through telepathy, that God communicate with the created. We are here to learn the different laws, which have been given us and thus we shall neither know about pain nor sorrow.

U.S.A. spend 50 % of the savings in space research and the rest of the world does the same. The most important aim is travelling in the space, before an insane person presses the wrong button.

The space brothers have always helped us; they need us, but we also need them.

Summary of a report from M'me Lou Zinsstag, who was associated Adamski during his stay in Switzerland.

Adamski spoke mainly about the world situation, space research and the endeavour to avoid war. He especially emphasised how necessary it was for us to travel in the space. He mentioned a new propulsion system, which this summer would be tried in U.S.A. Finally he again spoke about the space brothers, who work in laboratories and Government offices (here on earth.) These lectures were received with general approval by the audience.

We were all very pleased with M'me Zinsstag's arrangement and greatly touched by her kindness.

From Basel we accompanied Adamski to Rome, where he stayed for three days. In Rome we also took leave of him, for he was going to London, where other meetings were on the programme.

Also an interview in BBC was arranged. From London Adamski went by air to New York, where new lectures were to be delivered.

I suppose it will interest you to learn, that Adamski's voyage to Denmark was a very great succes thanks to major Petersen and his UFO-organisation which, and this we must not forget, was able to assemble 700 members.

Signed: May Morlet

LECTURE TEUSDAY 21 MAY 1963

Q: What are your feelings about AIME MICHELL?

A: As far as Michell is concernner, I am not against him not a thing, because he talks from his angle. I talk from another angle

and we all each have different experiences, like we may all have a stomach ache but each one is going to have it a different way. And so he can only talk from his experiences. I talk from my experiences.

BRUCE
CATYU2
HARTONZ

Q: Are the conditions of living the same on the other planets, as they are here?

A: Conditions of living, in general, yes, but the Governments it's a little different you might say. They do not work for profit, they produce for need only, so the conditions there are different that way. The social system has no divisions, like casts system, poor or rich, or black or white, it recognize one human congregation of human beings - like a big family - I continue on that question -. In 1933, when the US Stock Market crashed, the whole world was affected. Roosevelt was the President. A lot of factories were standing idle doing nothing, he opened them, up with one purpose: production for use, and not for profit. So the industry got to go again and perhaps if the opposition would not have been apparent, we could have had that system throughout the world nowadays. Production for use - not for profit - because it's the profit that's causing the trouble - the one augment on others.

Q: How are you so well acquainted with the programm of the Government?

A: Since 1952 I have been pretty steady contacted by the space-people, meeting them and talking with them. When I say, I am meeting those people, I am not the only one. There are others, who have met them, and there are no Governments to day, small or big that has not also met them on way or the other.

Q: The lady who ask the question says she knows quite well that G. A. has been in contact with those people, but she does not realise, why more propaganda is not made about this things, while satellites like the last one of course of Gordon Cooper, is in every newspaper.

A: The reason for this is, that you can't change anything in two minutes or even a couple of years, not when it comes to a world of three billions population. There are three billion human beings in this world and each one has a slightly different point of view and you can't change that, it takes time. You can't get the truth to three billion people in one time, through the medium of a paper, besides

when the truth is known, it will affect the full foundations of the 4 corners of society, that is, it will affect »economic«, »politic«, »social« and »religion«, all this got to blend together, you can't upset one without upsetting them all.

Q: I don't understand, if the contact with these people is so profitable, why one does not go on with it, it could not hurt religious feelings?

A: Oh it could'nt? Oh yes it could. In 1959 I lectured in Rome, I had 40 cardinals in my presence, besides the military and other people, and they said this: »No matter how old the people are, they are like children, they can't be shocked into anything without getting frightened«. Everything is going to change gradually, frankly speaking, when you come to that angle, we have in the USA – alone in America, – 22 different faiths, none have agreed with the others. How are you going to change their minds, that they won't be frighten or going in opposition against the others? You've got to educate them gradually. Our spaceprogramme, is part of this programme of education as well, the government know what they do, they don't want panic. When Mendes France was in power in France right here nearby, there was a ship landed on a rail-road track provoking sparks, and M.F. was in contact with the crew. The ship pulled out and flew around. The people got frighten, nobody got hurt, but people themselves got frighten and took pitchforks, shovels, anything they could get hold on, and went into the woods, thinking that the ship had landed there. They were going to kill all the space people. As a result they killed one of their own men, mistaking him for a space man. What people don't understand they fear; we cannot have a panic in times like these.

Q: It is absolutely true, that space people did land in that little place in France and caused panic, but you can have regions still very backward. I think that if a space-ship landed in Place de la Concorde in Paris, there would be no panic.

A: No? I will tell you something. I am going to tell you that you are wrong! It sounds logical on one hand but it's very far from the truth. When Truman was in power the last year, a space craft came in to Washington DC, and Truman ordered it to be confiscated and the occupants put under arrest. This was in the papers all over the world, at that time, and what happened? More space ships came in over Washington and they were flying around just like our planes would do. Panic all over. All over Washington there were soldiers

on every corner with bayonets fixed and light artillery to defend the Capitol as well as the White House. The civil aeronautic administration were afraid, when the passengers planes were coming in, that they should fly into one of them and have an accident, and kill a lot of people, so they asked the Government to clear the air. The government ordered jets to come out from Virginia field, and for a while it cleared the air. Next thing, when the jets went back to their base, more space craft appeared. It went on that way, for almost two weeks, and then finally the ultimatum was given to the government, and it said: »If you free the ship, that you have confiscated and its people, we will clear the air, we will remove ourselves. So they did, but you should have seen the panic, that was in Washington. No, people are not always calm. Even to day we are afraid, with all the intelligence we do have, that – in case of war between two nations, like Russia and USA, or any other for that matter, somebody gets exited and push the wrong button. So you see, you can't bank on human minds, in that way you got to educate them gradually, and give it to them easily. And don't think that the governments does not have people all over the world, listening to people and judging the people on those grounds. They have. Years before, Orson Welles, put on a show »Invasion from Mars«. Do you know, that many people got killed? And it was announced on the air, that it was only fictional invasion, but some people did not catch the idea, that it was fictional, they thought it was real; and many people died from suicide.

Q: When can we cure cancer on our planet?

A: I get letters every day from people, and, some doctors from different foreign countries, asking, why don't they give us something to cure cancer. We have a machine, that will cure cancer. In 5 years time it could eliminate cancer, and other diseases out of the face of the world, if it is used by everybody. Yet that machine is not being used to-day, because it is still called experimental. It has already passed that, but kept off the market, because you and I could buy one, and have it in the house and all the family could be treated with it for less than nothing. It would cost you only 100 dollars for the machine. It is not a big machine, but again about 5 years time from the day that the machine would go out in the market in general form there would be no doctors – there would be no need for them, everybody would be healthy, but they are going to fight for their livelihood still for a while.

TIME REVERSAL FOUR WAVE MIXING

Q: Who has this machine? Has somebody here a machine like that?

A: Yes, it is in operation every day, in one of the big hospitals in the East US, on experimental base. I have seen the machine myself. I was taken there by the President in in 1955, and shown how it works. Now for instance, surgery is no longer necessary. Let us say now, that I broke this arm here at the wrist. The doctor has a pair of gloves almost like at an X-Ray job, and the thing is hanging on the ceiling. He turns it on, and focuses it on the spot. If you understand the human body, you would see, what is happening. The molecules that make up the human body are negative and positive like shoelacing. What happens here? The ray separates, the pairs like the positive from the negative, and, when they are separated, there is space, there is nothing there any more, because they suspend the solids of our body. Then they get in there, and replace that bone and put another ray on and harden it, like harden a piece of iron, all together, while you are watching it. No pain, no blood no cutting. Soon, the molecules get together and close in and no mark is showing. They have been experimenting with this now since that time but the opposition is against it. How many people have you got, in your neighborhood that opposes improvement? Maybe in that neighborhood it is on the pavement, sidewalk or something like that, because they are going to have to pay extra-dollars. And these are only singles, there are groups, organised groups and professions that are opposed of changes in the same way. All of that got to be brought together gradually, you might make them do it, if we could dictate them, but not when you want a peacefull society.

Q: Do you find all this things in USA only?

A: Not only in USA, there are some now in Russia, and they got it in other places too. Its not one Government working on these things, all governments even Suisse small government is working on certain items, that goes into the instruments for the astronauts.

Q: Exactly how can you communicate with the space people?

A: In Norway some years back, if you remember, it was published in all your papers too, two sisters were picking berries, that must have been in the fall of the year, when one of the big space craft came down. A man talked to both of the sisters, in a language they did not understand and even indicated to them, that they could go out and ride in the ship, take a ride. One was married the other was not. They refused and were afraid. Of course, they kept this to

themselves, but one of the sisters acted funny. So her husband wondered, why she acted that way. It had been a shock to her and she could not forget it, so finally he questioned her until she admitted, what had happened and that is the way the story leaked out; some reporters from Norway wrote to me and wanted to know, if it was the same kind of contact, as I had. They have contacted Mendes France, as I already said and they talked french to him. You have space people in Europe, that we have not in America, they speak seven and more languages, fluently. This people are advanced far enough to move our way, it is not hard for them to learn. Besides they can tune in our TV, radio, and learn that way, very easily. On top of that they use the only identical language in the world or in the Cosmos or even in Eternity, you might say. It is the same language – if you want to call it a language – that the Creator uses to the Creation. The Creator never stops communication with »His« Creation. Its a language that everybody understands and they use that. The language that I am speaking about, everybody is born with. You don't learn that language, its given to you from birth. But you forget it, because they impose the kind of language, that we now know upon you. The language we talk about now have been named, hunch premonition, – in science it is known as telepathy. It is an impression language. You can take all the nationalities of this world, talking different languages and tell them to ask God one thing, all the same, and everyone of them will be answered, if God is to answer them. Yet everyone will express that answer in his own language.

In an exoression language, where I ask you something, I give sound to it, after I have conveyed the idea, which was an impression in the first place. You are accustomed to sound or words, to convey the idea, but you get the idea a lot better without my words. Artists are flat very much. All great inventors use it. For instant an artist, may have got a beautiful picture by impression, in his mind. Then he starts on a canvas, and the quality which he had in his mind is so different, that he is disappointed, when he has finished the picture, because the delicate quality, and the fine quality, that existed in his mind, which was an impression, is much finer that he can produce there on the picture, on the screen. That is the language, we have forgotten, yet the animal Kingdom, and the vegetable Kingdom, and the mineral Kingdom, and the faul Kingdom, does use that language. You can walk up to a strange dog; if you are going to hurt him, he already knows, and he is on the defense, if you are going to paddle him, he is going to windle his tail trying to come

up to make friends. Even where a ship at sea is sinking, or going to sink, you will notice that the rats, try to leave that ship, before the human being know anything about it. And in thousand of cases you can see that language, we have forgotten. We have never cultivated it. Now, even governments recognize it. USA has a big school, teaching its astronauts as well as other soldiers, and other Governments take an interest in it, they realize the importance of it. So you see, space people have that language to deal with. In other words they get your impression, what you are about to say or how to convey their impression to you. The same way they already know, what's sometimes called mindreading. Lot of you have this experience. You take a walk down the roads. Nobody is on the road at all, you are alone, and all of a sudden you get a feeling, that somebody is following you, is watching you, and you look around and usely it's the case. Somebody is either watching you, from behind a tree or some window; or there is somebody following you. Now there is your impressions from that language, and you never fails, it is always right. That's one language, that you can count on, if you only would learn how to use it. But we depend on the sound to much, and to little on the feelings we get, because all that impression is a feeling, you become conscious of something, that you were not conscious of before. It's born with us. The space people use that language definitely, they use no other means, that's why, they have no criminals an their planets, nothing because they read each others minds and everybody is carefull. When you got a society like that, you got to be very carefull how you think, and how you act, because they are going to read you, and, if you where up to something to do wrong well, they know all about it.

Q: Are the Space People like us? What do they look like?

A: Every one of you could be one of them. They have various types, like we have on earth, and they are really beautifull creatures, but still naturally human beings like you and I. Some of them work on factories, laboratories, governments and other places here. In fact this is how the governments progress in science and in a few years we have advanced more than we did in hundred years or more before. A professor in Germany once said: »We cannot keep all the credit for science advancement to ourselves, because we have been helped.« »By whom?«, I asked, and the answer was: »You should not ask this question.« »Well, I ask it. I like to hear you say it«. Then he said: »Space visitors coming from other planets to our world«.

Now from a religious angle, everything that is up in the sky, which is supposed to be heaven, is all angels. Unfortunately these angels are men and women. I shall go on with the book of Genesis. »The Sons of God came down to Earth and took unto themselves the daughters of men, and had children with them.« What happened then, is happening now, besides when it comes to religious questions, are we going to forget the words of the great Messiah known as Jesus the Christ? Are we allowed to do that? Did he not say: »In my Father's house are many mansions«? Did he not also take a body, that was born in this world – to one of those mansions. Did he not also say to the thief on the cross: »To day you shall be in paradise with me?« Did not the Catholic Church, a couple of years ago, announce, that the Virgin Mary was also taken up bodily into heaven? Are we going to admit or say, that they are liars?

There are many other records although names changes, as time goes on. Once their ships were called »Vimanas« but also »Firy Chariots«. They are mentioned in Bible records. A number of people have been taken from this world in those days and have not returned. Some, that have returned, have been taken back to earth. You have got the same thing to day. We have in USA alone at least 200 people, that are missing that way.

They have not returned. We have some, that have returned, so you see, the same things is happening again, it's repeating itself, and you can't contradict history very well, no matter what you say. I am not here to change anybody's believe, or religion, that's the farthest from my mind, but we are talking about things, that are happening in our sky above your heads, which got our governments to move into space, to complete with them. The major thing – most important of all – is not where they come from, although that is also necessary to know, but that they are coming. And they have changed our life already by showing us the way into outer space, and that way of change can mean living for our children. I don't think there is a mother or a father, that does not want to see their children be happy and live instead of being blown up by atomic bombs, and that will happen, unless we have a better economy, that we have now, because our economy is shaking to day, and we could have had numbers of wars. I again go back to Mendes France, when he had made that contact. If you remember well, you will remember, that he called for a »9 Power Conference« in Paris. On october 13 that year, I talked to a man, who was in a three days vacation. He is a head of a big aircraft company, and he said, that after this three days, which should be the 16th then of that month,

the war would be on in French Indochina. But FM calling the »9 Powers Conference« for that month, through the plannings for war completely out of order and all powers accepted it. Nothing ever did come out about it but the war did not go on. All right, we went to another one, but that is another story.

General Mac Arthur was in charge of the Korean war. The Korean war started on parallel »38« and it stopped at parallel »38«. Not one inch has been gained by the communist or by others. Why, you may ask? Why was not some ground gained by one side or the other? General Mac Arthur himself made this statement, which was published after he retired: We should take the best from each other, like the communists taking some good out of democracy and democracy taking some good out of Communism and get together and arm against a space attack.« Now, why would a man, of a rank that high, say that, unless he knew, what was going on in space, unless he knew that the Korean war was stopped by an intervention from space? If you go back to the Korean war history, you will find this:

Two missiles as they called them, hit the water one day between some destroyers that were standing by at Incheon bay. The impact was so great that one of the American destroyers was damaged, and had to come to San Diego for repairs. Three month later the Navy published that. When it happened they put a fleet of ships around the impact point in a circle, to catch those missiles when they went out again. Meantime the radar was operating and they reported the missiles, when they went out of the fleet and came out at the other side – they never did get them. And a number of other things happened in Korea. If it had not happened, you and I might not be sitting here talking together. We would possibly have been wiped out by an atomic bomb.

When I say atomic bomb, I am not talking of the Hiroshima bomb. I am talking of present days bomb, which is 20 times more powerfull than the Hiroshima bomb was. This is something to learn. Try to support what is now going on, it is the space program that can eliminat anything like that, because once in space, we will never fight another war here on earth.

Our economy will be solid, because space is space, it knows no limitation, and men will not stop, once they know how to operate there. They want to see, what's on the their side of the fence, and they keep going on. Everything must be made here, so its really salvation for this civilisation, but it's actually the space people coming our way, that are saving you and I, and our children as well as

the future generations. That's what really the program is about, to bring out and that's what is most important. You can believe, what you want as far as religion is concerned, because it does not change you one bit. The space program will change your life on this earth, that's one of the things, that is definite. Any war that would start, would mean the end of this civilisation, and everybody knows that – all the big people know that. It has something to do with it, and that is why they are cautious right now, that's why, we have got a dead line, direct to Moscow and Moscow direct to us, so that no mistake will be made. A mistake would mean everybody out of this earth, so it's nothing to monkey about. Whether there are angels or devils down here, what ever it is, we are concerned in life even from a selfish angle. 50 percent of our working forces today are based on economy gathered from working for space.

If we were not working for space, 50 % of the working forces of the world, small or big nations, would be out of work. What would you have then? War!! So you see, they have already saved us from that kind of conditions, and if we go further into space, naturally we are going to absorb more of this, and gradually transfere automatically into it. All together, we really should be very happy to know, that we do have neighbours in space.

Astronomers tells us to day, that there are billions of planets out there – billions not millions – of which some are even better than our own little earth. Is it not nice to know, that some day, you are going to visit them free of charge? Is it not nice to know, that you are going to know all about your Creator's kingdom from one end to the other, even if it may take eternity to do it? You will always have something new ahead of you. It is a beautifull thought, when you look at it the right way. For an example you say, how are you going to get there? We can't all go in a space ship. But you know, Jesus said: »Dead came by man,« meaning that God did not institute dead, but man did, so life must come by man«. And if that will be the case, then life in itself is eternal. I am not going to quote religion now, I am going to quote science. We found out recently, whether or not you live after you get through here, which is a big question in every ones mind. I said, I will prove it by science. First I want to make this statement, that there is a difference of opinion between two labels. The Christian tells you of resurrection, that all will resurrect in time and Eastern philosophy says: »Reincarnation« – meaning the same thing. Yet you don't have to be told, because right now, look at the open, if you want any ideas. That is not man's work, it is the Creator's work, God's

own work. All plant life comes back every year. Your trees put out new leaves every spring, man does not do that. There is your evidence, that you should be at least as big, or have the same privileges as a tree has or a blade of grass has, because you are the highest expression of your creator. There is your resurrection every day – your spring time. True some of the plant lives goes to sleep for a couple of months during the winter, but here is science, in other words God tries to show us in every way, that we've got a future, and we still don't want to learn.

Science have proven that the body is made of known matter or material. You may cut a tree down and burn it – the ashes go to the ground which is carbon, the smoke goes up in the air, which is gases. The true essence of matter can never be destroyed. The form maybe will change but the essence that make up the form or the matter, can not be destroyed. Science has already proven that. That logically reasoning it takes intelligence, intelligent guiding to get matter or the essence together to make one kind of a form or another kind of a form, out of those essences. We must admit, that some form of intelligence, regardless what you call it, it guiding the essence of matter into new forms all the time. If the essence of matter live eternally, then surely the intelligent that guide the essence of matter into form and proceeds the form must equally be eternal. There is no other way out of it, and science have proven, what the Bible says: There is nothing hidden, that shall not be revealed. We are in those days of revelation. If man wants to know about his Father's kingdom, and man is a son of the Creator – as soon as he is ready for it, knowledge should be given to him, so that he may grow in understanding, of what is taking place.

Q: Why are the Governments spending such great fortune for space research when it could be put to better use? It could be helping the starving peoples of the world.

A: It is very necessary, that they do that, in plain let us put it this way: The outer space program, in which huge sums are spend, is very important; if we are going to survive in this world we have to proceed the way we are doing, hoping only that somebody does not push the wrong button through extiment and blow, us all of this earth. In the first place half of the working population to day is already working in the space program. Now, if it was not for the space program and alle the money spent on the space program where would these people be working. We would have a chaotic condition on earth, which would probably result in a revolution,

because no person, no mother, no father want to see their children starf. So thats what we are really doing now. The money must be spent gradually, not suddenly, and changed over, from what we could call earth type of economy, which is founded on wars and destruction and reconstruction, into space type economy which will be peacefull with no more wars on earth. It will take us forever to build space crafts in sufficient numbers to explore space, not saying anything about the virtual travels between us and other planets, like we do between nations to day. So it is very necessary, very important that we do, what we are doing to-day.

Q: Is the present space program OK, even if it is not the present known kind of crafts, that will be used eventually?

A: We can't change craft suddenly. We cannot cut of the present systems of power, over night, because the oil business and all the other stuff, will go chaotic suddenly, and that cannot be done. It got to be a slow change over – very slowly – and that is the reason, why it will take some time. Then why, you might say, why don't the government come out and tell, what they know? Well supposing that Russia came out and said, what she knows about space people.

The western world would say: propaganda! If the american came out and told, what they know, the Russian satellites would come out and say – propaganda – and the confusion in the public would be far greater, than it is to-day. There is one program set up already, it may take a few more years to finish the ship. It might be ready by 1965, maybe earlier. It will carry at least three pilots, and it can go to Mars and Venus. Venus is our goal, Russia is for Mars. The moment they will leave this earth they will be televised all the way. All the world will be tuned in, on their coming back, the conversion will be automatically. All the world will say »now«, we saw it on TV, we heard them talk. But up till then, this program must go the way it does. There is no other way out of it. Conditions such as we find in this world, are not in position yet and it will, affect every human being on earth, when the program is fully known. It will effect the total society on its 4 foundations. These four corner stones of society are no others than these: economy first, social second, political third and religious fourth. It will affect all foundations, but once the program is on, the people will accept it gradually and begin to learn. They will effect earth learnings. Parents who have boys, that must make a living for their future family, might urge the boys to take up electronics or something in that line in refference to space, because that's were they will have

to make a living later, that will be the only job left. All the other jobs will be automatic.

That's future, that's the coming civilisation – it will slowly change from the old to the new, and wars will no longer be known on earth. Never again will we have the path of war, killing people just to support a false economy, or weak economy, because you see what will happen. It may take a thousand years to explore all the planets within our own system. That's 1000 year of peace and prosperity, because every ship that will be built are for research or passengers. Liners, travelling between planets, has to be built on earth and every nation on earth will have some part in it. The whole world will have one target, which will unit humanity to a better understanding.

That's what the space people came here for primarily because otherwise, if we went to war now, there is a good chance, that we could blow the earth to pieces, and blow them to pieces to. If earth is knocked out it would unbalance the system. By going into space, we still are making a good living - even better than before and the society is safe, so is our system. Then after that, and man is that way, he says – all right I got to this fence, what's on the other side of the fence – so he wants to go and built a ship, that will take him further into space, towards other systems and there is no ending to it. In other words you can at least say you've got 10.000.000 millions years ahead of you, because man will be moving through space once he starts and will never stop, because there is no end to space. You could then really say that you'd have an economy without war of any kind – only through learning. Once man learns, he don't want to kill so learning all the time, brings Cosmos close to one self.

How small is the world today – because of TV an fast aeroplanes. The same thing will happen with the Cosmos, all things will be close like in the backyard.

There is so much well in the future that you might say it's even better than heaven, but it will take time. I look forward that by 1975, if all goes well, and we don't get some crazy fool pushing the wrong button, that the passenger liners at least will be moving between earth and the moon and, probably to some of the planets like Venus or Mars. In the mean time, there is also a question about defence!

Our systems is belonging to a house made of many rooms. Each room is related to the other, making up a system. All our planets are like the rooms making up the house, so they are friendly. We

are the only planet, that have no defense against ourtsiders, which means we are an open door to another system coming our way and enters through us and distruct the whole system. We are not the lowest in the Cosmos, we do not know where we stand, but we are not the lowest. There are systems, that are lower than we are, let us say that there are systems in the stage we were say 2000 years, 3000 years ago. Remember that even 200-300 years ago, men had boats that travelled at sea, and they were for a good purpose to transport humanity from place to place over water. Yet even then we had pirats, that would pirat those ships. Space is no different, there could be a system out there, that would have pirats, who could attack us. We have no ships, so when we build ships, they are not only for research and travelling but also for defence, to close up the gate that is now open. So we need those ships very badly. The military is involved then, and every body is involved. It will draw the world closely together. Now notice, the money we are spending on missiles mad for the purpose of carrying warheads in time of war. Since there is no war, we are using it to put out satellites to give us information and education. We may build ships with the purpose of defense, but if there is nobody there fighting us, we will use them also for research, so there is two purposes. So that's how it is, and when you see the program clearly, you can be thankfull to Spacepeople for starting us in such a program.

Q: What about that Japanese contact the night of 31 of october 1960 at Chirakowa?

A: I heard several stories on that and none of them seems to be right, so I can't say it was or it was not. There is an organisation that had Williamson up there, operating on a lecture for them in Tokyo and they put out quite a number of things that cannot be checked on and verified and so there is a considerable amount of confusion going on just that way. Some reports comes out, that seems to be logical but nowadays you can get any report out because there is enough books being written. Remember, up till the time F. Scully, G. Heard, and my book came out there were none. But after the three books were known then you could pick out of those bookse even historical events and make up a new story and produce a book and call yourself a contactee. A lot of them did that, and made money of it, and they are still doing it today.

Q: What about Van den Berg of South Africa?

A: Well, I am afraid that VDB at the moment might be in trouble. I am not sure though because I have worked with him all

this time, and I told him not to release the information under the condition he did, and since the information has been released, he has been silenced. So, I wrote a letter to him and asked him for more information, but I have no answer from him so far. When, I get home this time, I am going to write to his secretary, because I think he released the information too quickly or too soon, or he should have made a change. I think he got a little excited, and released the information, but as I said, I have not any details. I do have his last drawings, send to me about a year ago, before he released the information. It's a whole set of drawings, stage after stage and anybody that knows anything about that particular kind of work could put it together and probably have an machine operating. So I have it. In fact I had some of it as early as in 1959, because when I went on the trip around the world in 1959, I showed some of this drawings then and a moving picture. I showed them and told the people, what he was doing, why he deciphered them and how he proceed to decipher. In fact I showed a picture of the space men, that helps him. This is not a photography, but he scetched him, as he stood there, and so I have the picture of that man on a small picture hee. This is the spaceman who helped VDB solve the problem of free power, that he speaks of in his report.

Q: What the scientists reject, in your second book principally, is what you saw on the moon, they cannot accept that.

A: Well I can't blame them for one reason. We have not been talking much about the moon and yet there is history on the moon which bears out more, than I have mentioned. We will not have that history until we ourselves will land there, which we will. I'm not afraid of that - it will verify, what I said, like Glenn have verified the fireflies. As far as the russians are concerned on the two stamps - remember they issued two different stamps, now some in USA claim that the pictures were touched up, others say they weren't. The big question is which was which? But I know the one side, we've got a little of the other side. There is, more than they told us, I have seen, what I have seen and I'd stand by that to-day. I am sure that the sooner we get to the moon and get a chance to get over this other side, we will verify more. I have said nothing compared to, what there is there. Because going that way, you know moving a round, you don't see everything to the ground, it almost flash, its like you're going down a highway fast. You see there is grass, but what kind of grass? I am sure, because we have a history on the

moon and this is something very strange. The moon has been well photographed since all this has happened and the photographs have never been released to the public. Now I want to verify this. I never owned a restaurant, I never owned a business in my life, but I was living on the premises of Mrs. Wells's, who did own a restaurant. I used to meet people there. They'd come across, and stop at this café. It was a beautiful café, anyway, so all kind of people came there, and I'd be there. I like to meet people, so one afternoon, the National Geographic Magasin had got some pictures. I think you can buy the book complete now, but it cost you between two and four thousand dollars. It is not for the public so to speak but any way, it was all photographs taken with the 48 inch Schmidt: I have been in that observatory a number of times, because I got friends up there, that operated that Schmidt. But anyway, the military was coming up, going up on the big observatory and they stopped and I got to talking to them. These days they were't so close-mouthed that they are now, they were little freer. I had a big map with pictures of the moon from the Mac Donald observatory of Texas. I have it on the wall. Once of them says: »Mr. Adamski come up here, we will show you something.« He started lining them up and showed to me that if you just look down, you would not pay any attention to it, but when you are carefully examining it, you will see, that there is highways, or roads, paths, that leads for hundreds of miles, straight lines. Nature does not make straight lines – even on this side, and so he said: If you got a good map of the moon examin it. Some people will say shadows. Sure shadows, but you will see a straight line moving right along between the pics, of the mountains. You see a straight line at 240.000 miles or so away from the earth – you see a straight line for half an inch. Its many miles out there. You see a straight line going and finally coming up against this mountain and there is your shadow. The military at that time said: »We assume that this are tunnels«, because here, we followed it up and it starts on the other side of the mountain continuous. That was the first alertness, that they were already aware of, that there was something operating on he moon, on our own side, and I am not taking anything ancient to consideration. He says: »You got a good magnifying glass?« »Well I have one about 6 inches«. »So go and get it.« I got it, so we could see it more clear. We could see those lines going straight ahead coming against the foot of the mountain and then the shadow would appear which shows, that there was a mouth going into a dark tunnel, followed up to the other side you would find it lining out again, and you can see, that on this side of the moon in many places.

Q: Any greenery or anything like that?

A: Well greenery, you can't see that of course from that distance but let me tell you something. A year before the military came up to my place a doctor Johnson, who is now retired, because of a heart trouble, good friend of mine – in fact it was his mother that brought me the 6 inches telescope – she is passed on since, and Dr. Wilson who is now I think with the Flagstaff Observatory in Flagstaff round the Lumicon, there is an instrument Lumicon which is partly electronics, came up to my place one day. I had the 15 inch and the 6 inch and Dr. Johnson said: »George have you been watching the moon recently?« I said: »Once in a while«. He said: »When you watch the moon, watch it carefully and observe the moss that is growing in the crevasses of some of the craters«. We did. Of course it did not show any color, like green because we have no filter or any thing like that. We had to work with regular optics highly magnified, as high as we could without distortion, but there was indication of moss, and it would be moving. You could catch the movements as the breeze of some kind would move the little moss, not very much, but it moved. There was moss on this side and the astronomers are very very interested in it and they alerted us to watch now, they did not alert me alone, they alerted most of the amateurs astronomers at that time, that was observing the moon. There was a blue book coming out just about that time giving all the astronomers real help. You can write for that blue book, which is a magazine. I have it at home, and it gives dates back to Gallileo's time or around there up to the present day, just what is on the moon – so the moon has been inhabited, and there has been vegetation for a long time.

Q: Do you have any idea of what date that blue book is approximately?

A: Well I have no idea, but I think it came out after 1955, because when I wrote one of my books, I asked the author for permission to put the whole thing in. He refused the permission. He said, he got to use it again, because of coming to the hot points soon – that it might be of more value then, so I could not use it. It came out after that proclamation in 1956, I think.

Q: We want to by that blue book.

A: I'll give you informations, when I get home. I can send you the author's name and the date of the blue book, and you can go

direct. It tells you definitely what's going on, and dates, and names of the astronomers from the earlier days to the present day, that have reported things on the moon. It calls the big observatories bad names for getting out into the stellars space and photographing thing there, when they should photograph the moon. One says: While I am writing this article, there is a building boom that's going on on the moon. Well, I asked for the permission to put it in my book. He refused it, because he said »Things are getting hot, and I'll be vindicated, and the history will be vindicated, and that story will be wiped of. I am waiting for that date to reprint it, so you see, there is another one.

Q: From where does the bees and wheat come from, Venus?

A: That is hard to say, I don't think anybody knows. I have not asked the space people, so I would not be able to give you the solution but it's common sense, that everything we have, came out of space one time or another.

Q: We know, or rather, we have been told, that certain things did not origin on the earth, you think you could find out of what other planets they might come from?

A: Well if I have that in my mind next time, I talk to them, I could find out. There is a report going around, I have no prove for it, that a certain kind of birds and certain kind of plants has shoven up in various parts of the world, where they have never been known before. That could have come since they started coming our way. You know, even if they did not intent to bring it, maybe they had in a ship, some grain or some kind or seeds, and they could have dropped it from the ship, accidently. It could come that way too, so its pretty hard to say, and it makes a definite statement impossible.

Q: The way the question was put to me, I believe the sources of the other grains, are known, where weeds is not known.

A: Well, I am not so sure, that they are really known, because we probably have not followed that up far enough. If one form of grain would start on the earth by somebody bringing it from other places, then surely most other fruits, and grain and even vegetables could have been brought in the same way. So that might remain a mystery until further. When we make a trip to the planets and find those plants there, well, they might have received it from us, and taken it there, so how are you going to find out?

Q: Couldn't the space people tell you.

A: There are generations of space people that have passed on and it could have been done millions of years ago and new generations would not know a thing about it. There would be only one answer to it, if they keep record on everything. They could go to the records, thats the only answer.

Q: Why should you, and American be the only official contactee, who is permitted to bring messages, why only you, why not a Frenchmen, why not a German, why not someone from another country?

A: Well, there are other contactees around the world, that probably do a better job, than I do, but as far as America is concerned, don't forget that there is two ideologies in world to day, that could set the world on fire any moment and blow us out of this earth for ever, annihilate us with an atomic war. Therefore we dont know, what the other idealogy is doing. We in America know, what we are doing, and that be probably the reason for me, being chosen to get the messages through. We do know, that the Cuban question could have blown up, while we would be talking, and yet because of the information that was delivered, we as prepared for, and acted in proper time by the blockades and those missiles, that could put us into a world war, was completely removed. All because of such a message, which we might say the public knows very little about.

Q: Of course we don't know, what is really going on behind the iron curtain, because it does not come out.

A: That's right, we really don't know, but something must be going on there too, because the submission by removing there missiles from Cuba at the time, came along with the backing up. That shows, that there is something else working all the way through, and we dont't really know how many contacts the Russian really had, because they are not telling us anything.

Q: Do you know the saucer story in FSR, that did come out of Russia through Italy? It is about a women - a parachutist - who jumped from her plane. The pilot watched her for a while, then he landed to wait for her. She came down three days later, she was picked up in mid air, she said.

A: Well, that is nothing strange. In America we had number of cases even better than that. For instance, I have a letter right with me, its in pretty badly shape but its the original. On the 6th of july 1956, a jet, and I got it's number and everything, took of for a

training mission, with two pilots from Washington. They had three hours fuel, they did not come back. Six hours they were up and they should have given up because by that time the fuel should have been exhausted. Then at the end of the six hours, when they was given up for lost, in line of duty, the plane came out of the sky and came in for a landing. They had to stop all air traffic to avoid collision, because the approach was unannounced. The plane landed itself, and did not run up on the runway, which is not customary, so they got up there and investigated. No pilots, the plane landed itself and found its own home base, and they ask me: »In this case how could a plane find its own base without pilots, and land itself. They even admit in this letter, that they believe, that some outside force had something to do with it. This took place in Washington and the news came to me from the Amador base, Panama canal zone, from the News – Headquarters, so I answer them, I said: »All right, we have many pilots, that where in a mission, and failed to return. Some did later. After they did come back, they were questioned by psychiatrists, who do not know how space is, they have never been out there. They would not believe them and ill-treated them, and made insane men out of them. So now the pilots learn, that its bad not only for the pilot, but for the family wives, parents, husbands, all the way around also. This two pilots knew, what would happen, because they were three hours overdue and the tanks were both dry. They figured, well, if we go back there, the same thing will happen to us, so if the space people want to take us, we will go. This way we are lost in the line of duty, the honor is up; our wives get the insurances, and some days when people on earth wake up, then we can come back. I even said in that letter then, »this« way the space people proved themselves to be friendly, because the plane was return by remote control, – thats how it found its home base, that's how it landed, and I said: »One day, when we get out on those planets, we will find the missing pilots, and other missing people walking on the streets of Venus, and maybe operating space craft.« I got an answer back from them, from Amador Base, saying – »That's our conclusions« – So, you see, things like that have been happening all the times, but nothing get into the papers.
