

CONFERENCE OF THE 24th MAY 1963

We cannot be too carefull, there are so many dangers in this atomic age and everybody is on edge nervous all over the world. Everybody is expecting something to happen every day, every minute. The Spacepeople have to be very carefull, what they do, how close they come to earth, for we have radar everywhere in the world to pick them up.

Russia, America, Great-Britain, France, anyone say, well, that's an enemy with a missile out there and make ready for it. This has happened in 1961 and 1962, and the military has been alerted, not the public, and they were watching very carefully that object in space. So after quite a time, this object did not seem to move, it stayed in position.

Then they began to figure, well we have not got anything like that in America, that could stand steady in space. We don't believe Russia has, so it could not be a Russian missile. So then they got engineers, mathematicians to calculate this time and distance on it. Well, it was 3.000 miles out. And everyone knew, that neither we nor Russia or anybody else have something going out in space 3.000 miles and stand still there. Then they figured, it was an UFO. But the whole military was alerted to push the button any moment. The public did not know about it. They did not like to frighten the public. We are in a very tricky situation. People are asking: Why don't the space people come oftener and in larger numbers? – Supposing they did, and so many got excited, nervous and pushing the wrong button: We would be through, and we may say then, that the spacepeople was the cause of it.

Q: Are they on the level of the situation existing?

A: Yes, they are aware of it, and so they are very carefull. They don't want anything, that could cause a mistake. Now we know, that since this things has happened, we have established a direct line between Russia and the USA – between Krutchov og Kennedy. They can talk immediately, and so they can see, what is going on.

Q: What was the final conclusion of that special committee appointed in America to investigate the UFO?

A: Well, the conclution was that 10 % are not identified, thats a big percentage.

Q: I read about 7 cases, which they could not explain away.

A: About 10 % might be said are not identified. When they say

»not identified« they don't mean »not identified«. They know, what they are, but they do not want to name them. For instance, John Glenn took a picture on his orbit, of what they called fireflies. About a month before, I left for this trip, they were showing cameras on TV-network from coast to coast, that kind of cameras that are used for fast picturetaking of the missiles on Cap Canaveral. So the man in charge of this cameras was explaining them. Then he said: »I'll show you a film, that John Glenn took with one of this cameras. He did not classify it, did not name it, but in the left hand corner – they showed this motive about 3 seconds or so, maybe even less, there was a perfect flying saucer – but he did not classify it, did not make any comments. We have a lot of that, but the military do not want to name them, they just call them: not identified. Yet, we do know where they are from, and – as far as the officials are concerned – identified, but to the public they are not identified.

Q: Don't they use higher frequencies, so that we don't see them so much, and that they don't show up on radar?

A: No, that's false – you must be very realistic about the thing. You can see a jet moving at 600 miles per hour, and when he gets some distance, he had not increased the speed at all, he is still going at 600 miles per hour, and before you know, you don't see him anymore. You might say, that is because of high frequency. That is not high frequency. They just got out of your sight, that's all and that's what most of them do.

Q: But that has happened, has it not?

A: No, it has not. It never happened. What has happened was this: They produced, what we call a force field. John Glenn talks about it, when he is speaking in my forthcoming book. He says, that when he was out there, he saw clouds and in those clouds appeared, what looked like lightballs.

Well, the lightballs were the ships and the clouds were produced by a forcefield but not a forcefield of transparent nature – rather opaque and that's pretty well condensed. That is what really happened. The most radiating spot appeared like a lightball in the clouds, because radiation is strong, heavy and naturally lumination would produce light stronger than light reflection on clouds.

Q: How can you explain that this forcefield gives the impression of a cloud?

A: It ionises the air. You ionise the air through what we call static electricity, or negative radiation from a ship. And it ionises the air by slowing up, not by increasing the speed. For instance, you take the water, it evaporates, you don't see it evaporate.

It increases its speed, when it evaporates, but when it is coming down in rain like it is to-day, it has to slow up its action and the slower the action is, the more visible the thing becomes. So that's really not high frequency in the forcefield but rather a slowed up frequency, that produce those clouds.

Q: So the cloud is an effect of ionisation?

A: That's right.

Q: When they are above the atmosphere, what do they have to ionise?

A: Above the atmosphere they operate as a fast moving cloud. If you were out there and did not know, what is going on, you would see a fast moving cloud, a luminous one; but space being dark and the ship moving through dark space will appear as a moving star, except stars does not move as fast. So it moves very fast and you don't see even the outline of a ship.

Q: And this magnetic field is it made by the engine itself?

A: The forcefield is negative radiation, that is thrown out from the body of the ship to repel any debris, dust particles, even small meteorites and things like that. That's why J. Glenn in the orbit, when he reported the fireflies said, no one of them have touched the ship or the window.

Q: He went through them?

A: No. There is no windows made that would not be scratched. In California, in a desert we get, say 20-30 miles wind - in a desert there is fine sand like in the Sahara -A 20 mile wind is picking up sand and if you are driving on a highway, you would be amazed, how many scratches you will find on your windshield, and on your car. Well he was going at 28.000 km/hour, that's a terrific speed, even if the particles did not move, but stood still. If he hits it, he gets a scratch. But they did not, there were no scratches on the missile.

Q: Why don't the space people try to come in contact with the authorities, in an official way?

A: I know of no big government, that had no contact. One way or another. That go for some small governments also. I know of no government to-day working on spacecrafts which they are building – with the intention of going to Venus, Mars and so forth – that have not had spacepeople helping them. I was in a laboratory for 8 days and there were at least 6 men, there among them was professor Oberth. (That was in 1954). He was working for the Bell Aircraft Company, and professor Benicasso was the one, who introduced me to him at that time. And Oberth said to me: »We cannot take the credit for science advancement for ourselves all together. We have been helped.« I knew the way he meant, but still I wanted him to say it. So I said: »What do you mean?« And he said: »You ought to know.« I said: »Well I do?« He said: »Let me tell you, we have been helped by people from out of space.«

Something else from Karachi (Pakistan), when I stopped there in 1959. Some officials came up and greeted me, although we only stayed there 3 hours for refuelling the plane. We sat there just like we are sitting here in a little restaurant and we were talking about those things and one said: »What's the matter with you Americans?« The space ships come here, land here now and then and we meet them like we meet you, to have a dinner here or even a banquet, to talk things over. What is the matter? Why do you behave yourself that way. So you see things are going on in different parts of the world and in different ways. Now take Mexico.

A big ship came into Mexico 2 years ago. The ship was following a Mexican airplane at a distance and the spacecraft landed along side of it and everybody saw it. It was in the Mexican papers, nobody was kept there mystified; they saw the faces of the people through the windows. And then after 4 minutes on the ground it took off again.

Some governments will release information, they are not afraid, others will not they are afraid. Of course you can understand the USA, Great Britain, Russia and even France; they are all involved in this quarrel, anyone of them could produce a war and what they might find out from this people by means of instruments, they do not want to talk about. But the spacecraft is well known to be landing to all the officials of the world, and you may say including the Pope.

Q: Can you tell something about the deciphering and the meaning of that language or writing that was found on a strip of paper?

A: Well I cannot say for sure, but I'll tell you one thing else. There was an article about 3 years ago, where a code had been received from Venus. This code they said, was intelligently sent. You can tell, when a code comes in, whether it is intelligently sent or gouged up, you know just interference of our atmosphere or something like that. They said it was an intelligent code, sent from Venus. The Navy picked it up and they were working on it to decipher it. Frankly speaking I may say here, that a communication in one form or another has been going on between Venus for instance and planets of our system for the last 6-7 years. They exchange communication, and we have broken down the code. We know, what they are saying and what they are not saying. Besides that I may say a lot more.

All these Saucer Groups that are doing, what they call research work – they call themselves Saucer Research Groups – well they are really not. Even people that write books don't do anything. All they are doing is reporting sightings. You have a sighting, you report it, they put it out, that's all. That is not the purpose. We got to do more than that. And so they are not getting anywhere, except confusing; but the truth really is that the officials know a lot more. Let it be the Universities, let it be the highschools, let it be the governments, they are not interested in the sightings. One sighting is enough; one landing is enough, but they are interested in the operation and in the people – in their knowledge and how far they have advanced beyond us. So you can see then, that this type of information is not released to the public every day, like the saucer groups release their sightings every day. So the saucer groups as they have been known – since the so-called saucers came on the scene – have done very little. The job they did, interested a lot of people, but the most unfortunate thing about it was, that they implicated religion into it. And this is purely scientific and it should be studied from a scientific point of view and it should also be given to the people as a whole, and not to a certain group or clique. We may tell them, that the catholic, the protestant, you and others have as much right to know it as anybody else. And by having a certain label this groups are left out. Therefore we must alert the whole world to the situation and not as a small group. If a saucer group is a research group, then it better go on and do some research, just in the same way as our laboratories are handling things like that.

If you have something, that you are not sure of and you got a laboratory or something like that, you can prove it or disprove it right there. And that's what most of the governments are doing in

their laboratories. They don't disprove a thing just because someone said so or proved it. Now we have groups like that, which spends much money, because you have to have equipment, so we got service, that is rendered to the people instead of spreading a lot of confusion, and kept free from any religious implications. In the last years, mediums, spiritualist mediums and all that, have been giving messages and things like that. Well, that's not the program.

Then people that like to have the information profit, do not want even listen to groups that give messages through mediumship or something like that. A medium wants the mediumship – that's the business; but they should never listen to this. And that's where the big trouble has been so far. Besides from that the governments and the laboratories of various nature, be it universities or colleges have got into it from a scientific angle and that's where the true information really is. I have lectured for the state college, and different other colleges and also lectured for one university in the USA. They are all hungry for information of all sources. The younger people are constantly asking questions. They know something is going on, so they are asking these questions and naturally the professor or the teacher must be able to answer them. If he has no answer, then they go seeking somewhere else. I have also lectured for nothing but teachers and professors. They did know, what was going on and they wanted to know the answers, so they could answer their students, because a student has a right to know – his life is the future. Everything will be electronics and spacetravel and as common in the end as is today airplanes. And so the students are eventually going to build spacecraft, or even plan the ships. So they should know right now. And that is one of the details that should be in the program as far as the governments are concerned and other leading institutions, they have very much interest in that field. But the common flying saucer groups that are operating and have been operating for some time, have mixed up all with occultism, spiritism, mysticism and all sort of things which is of no value in these days.

Q: How is it possible to examine facts?

A: Even those, when they examine facts, how do they know that they are facts, unless they can test them through some method. Logic is one of the basic laws, logic, search for reasons and something that fix into something; because we are not jumping from one mountain to another and leaving gaps. We are moving in a steady sequel of advance. You cannot have a closed mind in this

depositing around 85.000 pound of iron into her center core. If it continues to do that in 1000 maybe many years more, it will become a second sun of our system. Because it is then nothing but a big iron ball, which will start atomic radiation out of its body. The rays would glow, when they hit something, just like our sun is glowing too. Due to the refraction of this atmospheric conditions both ways it is quite logical. We do have in America – already 5 years ago – what you call a black light. When you take a flashlight (lamp) and throw its light against that wall, you don't see any beam, it is all dark, till it hits something, then it luminesces. Just like for instance the way the sun is shining. It is the same thing, all the rays on the trees, and on the grass are even the same. But you put a mirror on there and the intensification produces a glare because of concentration and amplifying the bounce back. That is the same thing here. You shot the light, you don't see it, but when it hits something, then it acts like a mirror and starts reflecting. Since we say, that the sun is black or dark blue and not luminesces, as we thought, we have been doing the same thing with this rays. It has to hit something. That is, why space is dark all the time. Now was the sun the light, then space would be lighted especially, when you go on in direction of the sun. But instead it is dark. That means that the rays are coming through and when they hit something that puts up resistance, then they luminesce, and not before. And if there is a small particle like a firefly or a ship out there, a solid body and the rays hit that, it luminesces, that so it is like a star or a luminescent particle moving through space. It acts as a reflector.

Q: You would rather incline to the theory that the sun is a kind of etheric power.

A: That depends how you mean it.

The mystics are using etheric power, which is falsely used. Etheric power is not a religious affair or cannot be labelled as a religious thing; but yet they are using it, and confusing the public. As a matter of fact radio waves coming from a broadcasting station ... interruption.

Q: Can you say more about etherics?

A: Everything is finer than you see and that produces, what you do see. But we are going to clear the point of etheric. When you turn on that TV-set or a radio, the messages coming from the station are coming over the ether waves. Ether waves are certain frequencies or certain lines, which are invisible lines so to speak, over which

the messages travel. Simular in the music. You get a piano, and you have many notes. Now you can make a conglomeration, that don't mean anything; yet when you know how it operates, you blend all those notes together and you will get a beautiful melody; and each one of them has its own frequency, and has its own sound, you have to know how to blend them. Ether waves are the same thing; they are just as real as anything. And they can not be classed religious or anything a like. And they serve our purpose today not only in our world, not only for broadcasting from a station to your receiving set, but also as communication with Telstar and other things using the same thing even way out there. And the frequencies are a little higher between us and other planets because of greater distance.

You may say, the thing we call invisible is more realistic than the thing we call »visible«, because that is more constant, while the visible comes and goes. You can see forms come and go, but that which supports forms, produces forms, is going on for ever. So the invisible really is the real background, because that is the cause of all the effects, that we know and we are self a sort of effect of that. Call it what you will, name it what you will, it is there and it not only supports one thing but everything and it operates in various frequencies. Let me say how close they are. You take for instance a very fine tissuepaper, that you can look through. They can be very thin; you could probably have 10000 sheets of tissue paper pilling one on top of the other, that will measure 8 inches. Each one then let's say is a frequency of its own. You have 10000 frequencies in an 8 inch span blending together very closely.

And so the higher you go, the more you get that. In other words there is no limit to that; there is nowhere a limit. We are now beginning to learn those things slowly but surely. The spacepeople have learned that and are using that to their advantage like operating spacecraft which we also are going to do pretty soon and do a lot of other things besides, because it is not only spacecraft but the things which tend itself to your life, to my life, to the life of everything, that we are interested in. The powers and the utilisation of natural power are here, just like in the spring. The grass was idle here a couple of months ago; yet something comes up which we call spring, brings forth the grass, brings forth new leaves on the trees and everything. Man has nothing to do with that; he is an observer, that's all. And these are all effects of a silent and invisible force, that is producing that effects every year. Well, that is the same thing with everything. You can see that the flying saucer or the spacecraft or the people coming from other planets is not the

only answer, it is opening vast avenues of knowledge in every field of human life.

Q: Is not Ether really synonymous with air?

A: Yes, it is the same thing. You cannot see the air you are breathing, without which you could not live; it is ether or air, it is the same thing.

Q: Yes, but it is a different substance.

A: Of course. The airwaves and ether waves of radio are the same thing. They vary to the various degrees of activity.

The faster the action, the less detection, the slower the action, the more effect. When you see it, when you hear it. Everything really is supported or manifested by the aid of an invisible force and this invisible force is not only invisible, not only able to move things around, bring out the leaves and have trees grow and everything else, and even move the planet. But it also represents intelligence. Because before anything could be moved, or growing, there must be some sort of intelligent act behind it to coordinate the force, that will do that very thing. You can call it, what you will. Names do not really clear the position but the fact remains, that it is there. Even the breath of life that you have to depend upon to live from moment to moment; if you did not take it, you would be dead, as we know it. Yet in that breath of life not only exists the power that moves your body from place to place, but also the power for thinking, and the intelligence that comes with it. So you can see there is more behind the effect, than we ever give credit to. All we see, is the effect, and we ourselves are inclined to be guided by effects, because we are self a sort of effect; so an effect lends itself to another effect and our big trouble has been and is still today, that we are opening up faster by not studying causes. When we went to the causes in the early times, we went right to classify it as God or something like that. And there we let it lay, where there should have been a research, going on like it is going on now in the various layers of activity or effects that are produced by the various manifestation. And that one and same power is behind everything. We are doing that now,, because we must do it now, if we will travel between here and other planets, like we travel between nations in airplanes – and we will – the time is not far off, and it will be just as normal as anything else. So now we have to study those things, because we cannot just go out, run into something we did not know, which is invisible and then get wrecked and accomplish nothing.

So all those satellites that are sent out by the Russians and Americans are for that purpose, to study those waves, to study the conditions there; we may not get a perfect reaction for each instrument, but we get something better each time and as we prove upon the instruments, we get even better. We are in a process of developing instruments. They are far from being perfect, to what they are going to be, let us say 10 years from now. We are learning step by step by going out, into the invisible and study the invisible or the cause behind all the effects we see. That is part of the program about the flying saucers also. And there is no mystery involved there. Just a cup of common sense, intelligent growth of understanding.

Now as far as answering this gentleman here:

No, if there is a chance of destroying the earth, by going into an atomic war, there will be an intervention. They will not allow that to happen. Very few people know how many times we have already been saved from such a disaster; Korean war was one of them, but a number of other small wars were checked also. And if you do not want to believe me, which I do not ask you to, then read the records on the Korean war for instance. General Mac Arthur made a statement, after he was no longer a general, and it was published in all the papers, saying that the Russians should adopt some of the good points of democracy and we should adopt some of the good points of the communism and get together in a defense of the world. Because he figured, that we could be attacked from outer space. Now how would he know, that somebody from outer space could attack us, unless he experienced that in the battle of Korea, which had quite a bit of record on that. Quite a few things happened there during that battle.

Q: I can reverse your answer. You know the book of Wells: »The Battle between the Worlds«. How did Wells know there were spacebeings on Mars?

A: Early days records are the only place we can go now to verify some of the so-called thoughts or ideas, that have been promoted by one or the other.

One time Venusians have lived on this earth. Then the Jupiterians came down here and knocked out and ruined the Venusian temples and every thing else and build their temples on top. That is the only reference we have to the war of the early days, that was fought on this earth. All written records are already gone. As the excavation takes place, uncovering the ancient cities that have been covered

up for ages, we find things. In California we found a cave, around 1945, and you can tell it was a cave, because a boulder had come down and cut the entrance off. They got into it and found 9 footh skeletons of men and women; which also prove that one time there were gigants on this earth. When we are talking about war to-day, and war of worlds, we are not talking about the same type of war as Wells. All of our planets as far as we know have spacecraft; the only planet, that has not got any, is our world. So this is like you have an army all around, well protected, but there is one spot, that you failed to put guards on. Any enemy can come to that spot and cause trouble inside. Well, that is what the earth is like. All the rest of them have spacecraft, that they could repel any outsider, that would want to come in on them and cause trouble but they could come to us because we have none. So if we build spacecraft – that is what Mac Arthur is talking about – we could fill in that gap, and have a solid chain around our system, our solar system, because another solar system could come our way and start a war with our system, between our planets and theirs, the war of space which would be between worlds.

Q: Are you really intended to say that there are human beings on the planet Mercury?

A: I know of no place between the millions and millions of system that are completely without human beings. Every system at least has some planets inhabited, because there be no rime nor reason for creating anything without usage. Everything is for a purpose, that purpose must manifest. It is not even an intelligent act to create something and then not use it, because that something is created with the purpose of service.

Q: Yes, but that is pure logic. I agree with you. Have you facts about beings from other planets?

A: Human beings on other planets are like you and I and of the same geometrical pattern. I cannot see it in any other way. No matter how I research, I find it cosmic or universal. Whereever I go in this world, in Africa, America, Skandinavia or any other place, I find the geometrical pattern of human being identical.

There may be differents of expression, differents in customs, differents of heights and sizes but the geometrical pattern is identical. I can see no reason, why it would not be elsewhere the same. The same with trees, plantlife and so forth. I don't like to speak in the terms that religious people have – so I use this word. If there is a

supreme intelligence somewhere, that is responsible for all the effects we know – and we just got through talking about the invisible force, that moves things as well as expresses itself through those forms, – then you must admit, that the intelligence is going to maintain a regular pattern. Throughout the total eternity there will be an ever changing development. You can take a tree, and cut it down and make a violin and then spend a lot of time and patience and working that violin so fine, that you line up the molecules in a proper direction. That violin will speak the words, that you cannot speak, because the melody is in your mind of finer qualities, than you can express. Yet the violin expresses it for you. The development is different and can rise, but it is still the same material.

Q: What you want to express is very well, but have you records of fact of the existence of human beings on other planets?

A: Records of fact? Oh, that part.

Well we have over 10.000 space people in this world, walking the streets and working in the laboratories just like you and I are. Is that enough fact? You may not meet them and maybe you have, but you did not know it.

Q: I can admit that they are working upon saucer program, as I do, but I cannot admit, that I have seen some spacepeople.

A: You may have, I'm not so sure; now, the other day, there is 3 people here righth now, and myself is 4; we saw one in a restaurant right here in your own city.

Q: I cannot believe it.

A: You don't have to, nobody is asking you, but you will beleive one of these days and when you do, you are going to be very much upset.

Q: When a spaceman comes in on this earth, or a person that might be a spaceman, then this proofs that the spaceman can live in the same atmospheric conditions as we are?

A: Correct; you are correct 100 %.

Q: We can also suppose, that atmospheric conditions on their planet is the same as ours, or is this people able to live in two different atmospheric conditions?

A: No, there are no two different atmospheric conditions. You overlook one simple thing here in our own world. World war II

came and it was a bigger war than World war I. We took young boys from all over and threw them into particular sections of the world. Some of them were living under a pressure of 12 pounds/inch², some were living under 17 pounds/inch², and some were living under normal pressure of 15 pounds/inch². Then there was also this: Some came from hot places and others from very cold like Alaska. We threw them all together and put them in one section. Sure some of them died, but a very small percentage. Most of them survived, adopted themselves to the conditions. Now if we use this same measuring stick, for our own system and our own planets, based on the sizes of planets, we have no different conditions there. I can take you right now, by plane from here to Mexico City, which is 7500 feet above sea level. And for two weeks you will not be able to walk more than one block from one street to another. But after two weeks you can run the same, as you can here. Your lungs became adjusted, the pressure there is about 11 pound/inch². There is 4,500,000 people living there; there are Americans and all kinds of nationalities; they get accustomed to it. We have been told its sure, but did we have instruments to verify it? This was only opinion of man, in the early days on which our books of history have been founded. Today we have instruments that prove it or disprove it. And we are proving it.

For instance: The Russians, about two years ago dropped 380 pounds of package on the moon. Yet they said, there was no air on the moon. If you remember and read the records that this package has hit the moon and thrown up a dust cloud, that existed for two weeks and astronomers could see it with their telescopes, high above the moon. What supported the dust cloud, if there was no air there? We had instrument in the first and second satellite, that the Americans sent up, that registered no oxygen on earth. Yet we know, it is here.

I will show you how close, some of those things are. They are still depending upon opinion of man and opinions of man sometimes are not very good, and sometimes when they are good, they may not let the truth out, because of some reason behind it. When Mariner II was shot to Venus, at 16 million miles - I am not exact maybe - but one and half the way between us and Venus, the instrument went out of order, it failed to broadcast. We had to fix it from the earth, which is quite a miracle. They did it and had it broadcast again after two weeks of silence or so. If you know anything about electronics, you would know how to knock out a portion of a set or an instrument. You bypass a lot of stuff,

especially when you are not there to look at it. You set up a ray of frequencies hoping, that it is going to do the job. The heat was registered to 800° or so. Do you think it's true, when they give that information out? If it is true, why is the USA government itself allowing 14 billion dollars for a probe to Venus with a man in it, or maybe more. If Venus is so hot that the blood would boil, why then have a man there to have his blood boiled? And yet that is, what we are doing, spending that much money. So that means, that somebody in some place or government will be wasting money? Right? That is common sense again. Now on top of that, 21.600 miles the probe went out without penetrating Venus clouds. Clouds as we know them here, will be the same anywhere. They are cooler than the air. If it had penetrated those clouds, then it could have registered the condition on Venus from a position between the surface and the clouds, but it did not. From 21600 miles away you will not register very much on the surface. No, the instruments are not yet perfect. So somebody released an information, that was not correct. You as the public accepted it, because public does not know how to reason anymore. They grabbed it all, because some professor said it. A lot of men has become too old and young men should be in their jobs.

Now I go back to Mariner II. Just two years before – I have all the documents of that – we sent without a capsule a balloon 105.000 feet into space, quite a way up for a balloon. On it was a 6 inch telescope, first time to photograph Venus without interference of our atmosphere. And the answer was publicized very well. Venus had more water on it, than we have. And one of the big professors made a statment, I don't remember his name, but it is in my last book, that when we get to Venus, it will be like Florida all over. That is the climatic conditions on Venus.

Yet here they did not contradict themselves or contradict one another, when the probe Mariner II gave its informations. But they did not tell you anything about the intelligent message, that they got from Venus on that trial; they did not tell you anything about that; yet they really got an intelligent message from Venus directly to the probe.

Q: Can you tell us, what it was?

A: No, I cannot, but it was an intelligent message, that was sent back, and it will take time, before they will tell us. You got to take time, you got to blend the thing gradually, let people grow into it. When the automobile came up, older people was afraid of it, it would take horses away from the street – they ran away.

It took time for them to get used to an automobile. And now everybody wants a car, and when they get into it, they want it to go as fast as it can.

The same thing with airplanes. It takes time for all those things; all you have to do is to take history, then you will see how slow humanity changes, and you got to do it very slowly, because if you do it faster, you are going to have a revolution or something like that.

When Orson Wells put on that show about Mars, how many people know that thousands of people committed suicide? Would you want that to happen today? With spacepeople coming, while a lot of people are not informed or will not believe?

Q: Why did so many people commit suicide?

A: Why? You ask them, don't ask me, I don't know why. You and I can take a laugh at it, but you will be amazed how many people don't and governments know that, but they don't want to reveal it. No government wants that.

So what do we have in the USA on TV's? Two, three times a week we have a educational program, even direct or based on fiction, but it is all dealing with space. So the people get accustomed to it. So you see it is a gradual process; the government know it is necessary, because I have been signed up for an activity; that may come next year (1964). I will be lecturing in educational field for the general public. There are a lot of things going on, that at the moment just cannot come right out. It got to be a slow progress. You cannot give a child a sharp raser, when it does not know how to use it. You have to educate human beings. Like a cardinal in the Vatican told me in 1959. He said: »No matter how old the people are, they are like children, they get frightened very quickly and you must educate them slowly and gradually, if you don't like to disturb their equilibrium completely«. And that is true. When the whole truth is known, it is going to change our whole economical system, our social system, our political system and our religious system. The four corners of our society will be changed completely. And you cannot change them overnight without destroying the society. This thing is bigger, than we ever give a thought to.

Q: How many times have you been out in space?

A: Number of times. I want to answer that question from one angle only. Do you believe that colonel Glenn saw the fireflies, when he was out there, when he was orbiting? Do you?

Q: We have to believe it.

A: Oh, you have to believe it, you say, but you don't really have to. Let us say you believe it. Would he have been seeing those fireflies out there, had he not been out in that capsule? No, he had to be out there to see them.

How could I write about them seven years earlier?

Q: Perhaps it was only coincidence.

A: That is what you think. I wrote about them in 1955, and reported them identically; it could not be a coincidence, because it was an identical report. With just coincidence I probably could come near, but it was identical.

Q: Were there other things that you saw in space, that are reported by the satellites?

A: Yes, there have been a number of things. If you search the records on our satellites, what they have already uncovered, you will find that things that have been discovered, I have reported in the book, that I published in 1955. There is not only the fireflies – that is only one of the things, I put your attention to, because that is pretty well known, the others have not been spoken off that much.

Q: Have there been other people taken into space?

A: Oh sure, I know of seven. I mean definitely, seven that I can bank on. There have been a lot of reports of others but you know they are opportunists, that makes money out of the field. Those that I know of, that one time had nothing, today make money of that field. I don't accept their statements, because they were out for the money and they make money. You may say, I made money, did I not? No, I did not. I am 19000 dollars in debt, or in the hole that I got to pay.

Books don't give you much money. No matter how many times I have published. My first book did not give me anything, because Desmond Leslie had the bigger part of it, so he naturally got bigger share. That is common sense. The second book were pretty good, but you can think of 10.000 letters we got in 6 months. If you are going to answer anyone of them on the average of 5 cents to 50 cents per letter, it is going to cost you some money. We do answer all mail. Then on top of that, you got to live. I admit, that if you publish a book every 5 years you probably could make 20000 dol-

lars. Well, that is no money based on a 5 years period. If I was not doing something else, had not another source of income like lecturing and so forth, I would have to be a beggar. So you see, you don't make money. Now yet a lot of people made money, as I stated, by fortunetelling and by promising people free rides. Right now – I don't know if you heard of this man – Mr. Bethurum – who live in Arizona. He has got the insane idea, to sell people a ticket to heaven. The more money you give him, the better ticket you get. When the disaster comes to the earth, the better one will be that one, who gives the most money and he will be the first one taken in a spaceship to be saved from the disaster on earth. And a lot of foolish people are buying that.

Q: The more money you give the bigger room.

A: Yes, the bigger the room. The bigger the seat or better reservation. Well things like that have been going on all the time. You know, an old lady of 90, or 80 years will give you 10.000 dollars, if you can in any way convince her, that you can pray her into heaven. Because she is too lazy to pray her own self into heaven.

That is where the fellows in this case make the money. They offer something lovable and the people is willing to pay. That is why I will not lend myself to any of those groups. I have nothing against any group, because the people ask for it. But I am myself not going to work and lecture for a group, that is of that type. I'll talk to any youngster and anybody willing to listen. I am not asking you to believe it, you get the intelligence of your own, so you should be reasonable and logical enough to figure it out yourself. I don't lend myself to that, I never will, even if I have to go and beg.

Q: I like to know how telepathy works in connection with spacecraft.

A: (answer follows).

Q: During your trips in space have you set foot on another planet.

A: Yes, I have.

Q: Can you give a short description of what you have seen?

A: Well, that is no different, as when I for example got off the plane in Denmark. There are different customs – every place has a different custom – to give an idea –: They are all more intelligent and it is a society of humans not a society of strangers.

Q: Are there houses and so?

A: Yes, in very different design like we have in different parts of the world and all of that; they have homes, they have children, they are no different than we are, except their further advance, their intelligence.

Q: Was it difficult for you to adopt yourself?

A: You would adopt yourself, like you would adopt yourself anywhere. Look, when I left at home it was 85° heat; here I came in and there was snow, and I have been cold ever since. So you see, I had to adopt myself to these conditions even in that short time.

Q: Is there a sort of religion on this planet?

A: No religion like we know; their religion is daily living. They live their religion instead of going to church or talk about it. Let us put it this way. We were mentioning at the beginning that when we look at a man or a tree we see the effect. But do we ever question to find out, what makes that man move, what makes that tree grow? We don't. Well that is the difference between us and them. They see the effect, but that is not what they worship. They worship that, which is invisible or the cause producing the effect. They are worshipping the Creator in every day in every moment of the life. Everybody. They respect all creation. For instance Luther Forbank, one of our scientists, he was a great man, that has been working on mutation in California. When somebody asked him:

»Do you believe in God« he said: »I work with God every day. I see Him face to face every day«. They called him a atheist, because that is how we look at this, and the old man died of a heartbreak. Yet they did not recognize, what he said; because when you work with Nature, with plantlife, with animal life, with any form, with human being, you know what you are doing? You are actually working with the creators own manifestation in the creation. And how would you understand your Creator better than to study his creation. And that is, what you are doing, when you work with Nature. They live that type of life.

Q: Is there a group of people representing the people?

A: Sure, this always has to be. But they are not any better than the people. They have no cast system like we have. You may be heading the government there, you may have a lot of workers beneath you; you are not better than the other fellows, you are on the same level. You don't get any more money, or more credit than

the other fellow, that is not in your position. The other fellow has for instance a position of making a pair of shoes, that you might wear and you have a position to be sitting there and see if there is nothing going wrong. You are not better at all, as far as the society is concerned, that we have here.

Q: Are there political parties?

A: No, if you have a political party you have a division, and you will have fight one way or the other. Society that is united has no political party, no parties of any kind. Do you have a party in your own home between your father, mother, brother and sister?

Q: Yes.

A: Have a party? Don't make fun. This is too serious.

Q: How can you explain then, that all those people are thinking the same way?

A: They don't think the same way. They all blend together because every part is necessary for the total society. So there is a difference of thinking. But not a party system where you are a stranger, because my party is different from yours.

Q: And because the man is able to run a certain factory, because he thinks that way, he was given that position.

A: That's right. So they all think different. I would not like to live in a world where everybody thought the same thing. That would be a monotonous world. Don't you think different? The man that made this cup thought different, than you are thinking and the man that made this (another object) thought different, than the man that made the cup. But these are all necessities.

Q: When people begin to think different, then you will have surely conflicts.

A: No, when people are not allowed to think, that's when there will be conflicts, because there they are mystified. You are wrong. The more the Russian government educates his people like the young people the less there will be a chance for communism taking over the world.

Q: I agree.

A: Oh, then you contradict yourself.

Q: They are certainly on a higher level of living, they are more intelligent.

A: Yes, there is the point. Now I mention this, because it is quite necessary, since everybody in one way or another has in the religious field some kind of faith.

I would not be the one to call the great Messias of the past liars. We would be doing quite an injustice, because a lot of things have come true, that they even said in those early days. Neither would I want to call Jesus a liar. He himself said: »In my Fathers house there are many mansions.« He took a body born upon this world to another and He is not the only one. There were other bodies, according to history that have been taken up from this world. Which proofs that there are worlds, that are just as easy to live in, as the world we are now living in. Besides that, we have, I think some 200 pilots, that have been missing since these things have come our way. Some told after coming back, what they have been doing in these hours, that they should have been back. In other words a ship that is supposed to have 10 minutes of fuel in flight is gone for 6 or 10 hours and comes back. Where was it all the time, after the 10 minutes fuel was exhausted? We have cases and the American government don't like that. These people, these pilots have been questioned. They tell the truth but the stupid people like we ourselves don't believe them.

Q: Has this been published?

A: Yes, this has been published, in a number of cases. We have cases, where people have been taken from this planet to another and brought back and they happened to be in the position, where they were in a military center. When the military asked them to tell, where they have been all this time, they would not believe them. Not very far from where I live, it happened on a big military base. They had a man looked up just for the same reason. Yet he is insane. But he told the truth and nobody believed him, so they considered him crazy and they were powered to put him in. People don't want to accept the truth. You tell the truth and you will see how long you last. You boys from school, start telling the truth tomorrow, nothing but the truth to your friends, to your teacher, to your family and I assure you, that in two days you will change. You will say »I don't want to go this way«. You will be loosing that in twoday time, all your friends and everybody else will think you are crazy.

People don't want to accept the truth, and they even don't know what truth is to begin with.

I lectured for a group of scientists in the States and one of them said: »Oh, shut up, you are nothing but a crackpot«. I said: »Thank you for the honour«. He said: »What do you mean ,honour'?« I said: »Galileo and in our modern times, Marconi, Mme Curie, Einstein, Edison, Bell, – all of them were called crackpots. They brought through something that to-day society is using.« I said: »I don't deserve that honour, because I have not brought through anything yet, I am not an inventor like they were. So I don't deserve that honour, that belongs to those great men, that are immortal in history, that even 10.000 year from now youngsters like you will be going to school and read about.

Between the scientists that is called scientist to-day there is a difference in science. The scientists we hear about to-day are an effect of science; in other words, they work from one effect to another. So it cost us so much money to put their findings in anything. Well other scientists of which we talk, which are like Marconi and others, are abstract scientists, they work from cause to an effect. That is why they discover things, that society finally benefits by and that is why they are in the history and always will be; they are immortals already; immortalised by men of earth, that all the schools of the days to come will read about them. All other scientists, are not more than just living that's all. So I said to them: »I don't deserve that honour«. And the scientist woke up for the first time realizing, what he said; that the very top man, that he himself worships, were called crackpots in those days.

Q: Can you tell something more about telepathy?

A: Telepathy is a word that has been used for a scientific purpose. Science is using that, USA government uses the word telepathy. And many schools like Duke University use that but also call it the sixth sense of perception, they have been experiencing with it for years. So it is nothing new. But human being has been born with it. Every animal, every plant life is been born with it. It is the life of the form itselfs. And the life does not depend upon the senses at all. You get a feeling, it is called premonition, clairvoyance, any of those names, used by different people at different times. But in final analysis, it is really a feeling, in other words you get a feeling and that is a state of alertness, and this state is conscious consciousness, you will be conscious of things around you. You can communicate in any way. Animal kingdom got it, vegetable kingdom got it, everything has got it. It is the life of this

different manifestations. For instance you may have a good mind, a better than anyone you have ever known. But if you lose consciousness, your mind is no more good. It is dead; but you can lose the mind and be conscious, and be very much alive and build empires. As sure as you can that, the conscious state of feeling as we call it, can proceed the mind. It operates independent of the mind and can live independent of the mind. But the mind cannot live independent of consciousness. And that is what telepathy really is. We have never been in a position to cultivate it, we always depend on sound. Even the questions that you may ask me, must come in silence to you; then you give word to it; so I might understand, what your ideas are, or your impression were. So you give sound to it and I answer in a sound. Well, even then you sometimes cannot express in sound even, the impression that you got, as perfectly as the impression you did have, because you cannot find words for it to express it as distinctly, as it was impressed upon you. A man can play on a violin and produce a beautiful melody. If he was to use words to express that same melody, he would never do it. It is the finest thing, that is in life.

You probably heard of rats. When a ship is going to sink they are the first to get off. They get that feeling, that urge, that impression to get off the ship, because it is going to sink.

Yet the humans get all excited and out of themselves, mostly they cannot help themselves, because they don't follow the very feeling. And you will find, that when you walk up to an animal like a dog – a strange one, you never have seen before. He has never seen you. That animal already knows then, when you are going to hurt him or flatter. If you are going to hurt him, he goes on defence, if you are going to flatter him, he starts twinkling his tail and comes up to you.

There was no sound involved, all impression.

Everything of this is impression. So by cultivating that impression you can take for instance a photographic paper, and put it in your joined hands and if you have a good picture, impressed in your mind, you can get that picture transferred from there on to that paper. That is a short distance, maybe 12 inches, from the forehead to the joined hands, but you can send it across the world, across the universe the same way. The main thing is to trust oneself – to have confidence in oneself. Practise and have confidence in it because you consider, that you sometimes receive something and you don't always accept it, because you wonder to whether it is your imagination or what? You do sometimes recognize it but you

think it is your imagination and you see your imagination has been confused. Because when you imagine an elephant mating with a fly and get a freak, then it is imagination – that will never happen in nature. If you keep on working with telepathy that way, as it is called, and you gradually use it, you may be mistaken here and there sometimes, but you evidently get out, where you can actually be sure, that it is coming all right. But it takes practice. Just the same with the photographic paper. You might take a sheet, and hold it in your hand maybe for five or ten different tries and nothing happens. Then all of a sudden something happens. Usually the first picture that comes in a case like that is full of lights each way, that is the way your mind runs – it is staple on nothing – it is running like one of those lianas in the jungle running from one tree to another. Later on you begin to get straight set lines or set forms. Try to picture a chair. You try to see, how well you can get it. Science is working on that today in the different universities – that are working with that plan; and the governments as well.

It is very valuable, because they proof to you, that you are operating O. K. And all it is, is a feeling; you get a feeling, a state of alertness, that is what it is. And this state means conscious consciousness. You become conscious of things, you were unconscious of before. Just the same as if you walk down the street, nobody on the side. All of the sudden you get a feeling that somebody is watching you, or following you; and somebody is. That's all telepathy.

Q: Why have we lost this faculty?

A: Because we resorted into sound all-together. If you were to use the word God in this case, that is the way God or Creator of all creation including us, communions with his creation. It is deep within the individual –. There is not a man here, or in this world, never have been one, and probably will never be one, that can actually tell you how a form growing from a single cell within the mother to a baby. The mother does not know it, and yet you must admit, that mother through the feeling knows, that she is going to be a mother. And that growth is taking place perfectly within her. The intelligence of creation of a form known as a human being is already present inside of that mother, independent of a mind. Now we talk about mind – your mind is of no value. Your mind keep questioning, because to your knowledge in there lies something, that knows what to do. Next thing, you know the baby is born; you are a mother. Now you must admit, that the Creative

Intelligence, call it God, call it what you will, is already within you, or that form could not be growing there. And if you know how a human being is growing, then you would know how every other form is growing. The Bible said: »Man know thyself and you should know all«. Because all the other forms are growing no different, except for different purposes. If you know the creation of a human form from a single cell to a human being that later is born in the world, you would know how every other forms is created. So we are not here living to be working, eating, killing each other in a war: we are here to learn the very laws, that the Creator, whoever He may be to you have embodied in you, in me; for like the father, so the son. That is a part of our inheritance. That is the part we are supposed to learn and when we will learn that, we will never know the sorrow and pain, that we know today. All sorrow and pain are brought upon us by not knowing what to do.

KARMA
By doing something wrong sometimes, it comes back on us and cause us trouble.

Why the space people is so far ahead of us – was asked of a catholic cardinal in New York, a diocese in Los Angeles and then finally the Pope that died. All three men answered this way: The reason why we are not like the space people is, because we have committed a sin. Which is a good way out. How then have they started on the right way and then gone ahead? It is no more different than a child in school which start and go ahead of the other, while the other that started school at the same time is way back. They have not gained very much through the same time and the same years. Well we seem to pile up some place, while the space people go ahead.

Q: For your trips in space did it take a long time to brake down the distance. How long time did you stay there?

A: A lot of people get confused on the distances. We don't know the distances exactly; all the distances between the planets have been speculation; we are yet without the ruler of measurement. For instance when we shot the first radarbeam to the moon in 1948, from New Jersey, the astronomers said 238000 miles to the moon, the army said 242000 miles. So they compensated for it and shot in between. And the result – they missed the moon – they just hit on the edge. And the same is true with all the planets. We don't know exactly the timing or the distances.

On top of that, when ships are moving, especially in numbers, they always take the shortest way and the shortest road usually is, when the planets are close together.

One of our private companies are building a ship today, that are to be ready in 1965. It is supposed to travel 1 million miles per hour. And people like you and I are going to travel in it. This ship is supposed to travel between here and the moon to begin with.

Now, a ship can travel 10, 20, 30 millions miles per hour just as easily as 1 million miles per hour. We overlook one thing.

The submarine, has been build so that the occupants of that submarine will all be comfortable, no matter what depth that submarine goes to. In other words, on the surfaces there is normal pressure; when it goes down to the depth of 100, 200, 300 feet, or a couple of thousand feet, the pressure increases. This ship is built to take care of all that. So the occupants of the ship don't even know the difference. They are just as comfortable as we are now. Spacecraft is based on the same principle, because we say earth will be like the bottom of the ocean. The pressure is the heaviest against the body; you start going out, it is getting lesser. When we will build spacecraft, it will be eventually built on this ground. In other words the ship will be able to take care of its forces all way around. But what we must learn is to reverse polarity. If a ship is coming in to this planet or any other, at full force, it would crash, as some of them in the early days did, by the magnetic force, we call gravity pull. But if you reverse polarities it will act as breaks. I have instruments at home that can proof by demonstration, how it should be done. It is a very simple method. The speed of ships usually is 12 to 9 hours from here to Venus.

Q: How long did it take for you to go there?

A: Earth time, 12 hours.

Q: Did you stay long there?

A: I staid 5 hours on the planet.

Q: I heard they can make very sharp angles.

A: They don't do that, that's all false. Let me show you this. What people report is impossible to do even for spacepeople. It is said that they go up to 18000 miles per hour. They have been caught at that speed by radar in our own atmosphere - and all of the sudden they seem to reverse the position - go just as fast the other way. What they do is, making a u-turn. It looks like they stopped and reversed the position, but they did not. They actually made that u-turn.

Q: They take a very sharp turn.

A: That's right. They go one way at 18000 miles/hour. All of a sudden they turn the other way still at 18000 miles/hour. Do not slow up at all. To your eyes, when you are looking, it seemed like they stop and go back.

Q: What is the opinion of this people about us?

A: They know our problems and they are warning us, that we don't blow ourselves into pieces with the atomic bomb. There have always been a necessity for war; right now its the same, because of our economical system – and they know it. If we go to one now, we are through. So we have only one alternate; shoot the economy into space. We have to build our own ships. Space is unlimited so you have a job for ever. First people are in space, we have to build better ships and better instruments. We then change war-economy into space-economy; and at the same time learning instead of killing. And we will have a better economy without fluctuations, like we have in our economy at present. So thats a reason, why they want us out there. It will save our civilisation. The USA itself is better than 50 % in space already in the factories and you may say, that the world as a whole will follow pretty well. On the industrial side already about 40 %. Switserland for instance is a small country which may not make a big ship but it may produce small springs that goes into a watch, that will be very valuable in the instruments

they have, and which will be very delicate to detect. All spacecraft we use and are going to use will employ a lot of robots or automatic machines to detect. No human mind is developed to detect danger 10000 miles ahead of you. Yet the instruments can. So they can avoid danger of any kind. Suppose there is a big asteroid 30000 miles away and your ship is hitting for it. You cannot see it, you don't sense it, the mind doesn't get it, but the instrument can detect it and immediately begin either to repell it or diverge your ship of that particular track.

We must get into space, before somebody push the wrong button through excitement. Once we are there, our economy and everything else will be better than ever before on earth, and there will be no end to it. Wars will never again take place here, because there will be no reason for it and we will be growing and who knows how much contact we may establish with our own sister planets on top of that. That's all about the future, so you see, the future is very beautiful.

Q: They don't need us.

A: They need us, and we need them. And they are helping us that way. They did not come down here to fight us but to help us up – to get us into space and save our civilisation from its own destruction by atomic warfare.

Q: Do they need us that we don't blow up the planet?

A: I don't think it would happen, because if we had a war here for instance a 24 hour war, – and let us say the USA dropped 1000 bombs, that easily can be done in 24 hours and Russia 1000, there will be nobody here anymore and the earth will still be here. But if they would drop it all in one section, like where earthquakes sometimes slip, then they could split it in two and that of course would not be allowed. There would be an intervention then, because once the planet is gone, the system would be thrown out of balance and that would cause the other planets to go to pieces too.

Q: What can they do to prevent us?

A: They can stop wars, as they already did. Some examples are the Korean war, the Indochina war and the Suez war. They stopped several wars before they turned into major wars.

Q: But how did they do it?

A: Well, let me tell you this. In Korea under the Korean war, our destroyers were standing in a bay and the rest of the fleet was standing just outside. Two missiles came out of a clear blue sky and hit the water in the bay, with a terrible speed. There was such an impact that the plates on »Gardiner Bay« – that's the name of the destroyer – were dented with the impact; nobody was hurt but the plates were so damaged, that she had to come in to San Diego Bay, 3 months later to have a repair. Now in the meantime when they were down there into the water, the fleet immediately went into a circle to prevent them from escaping. While they were doing that, these things went under water, under the fleet and were caught on radar going back out. Now that's enough to frighten anybody.

Q: That submarine in an Argentinian bay a few years ago, was that the same sort of thing?

A: Well that's not so extraordinary, it has happened also in San Francisco Bay and San Diego Bay recently, but most of those things cause you to think.

Q: Sometimes there must be a limit to our possibilities.

A: There is just no limit to anything – nature takes care of that. On Palomar, where I used to live, there was a prevention of woodfires, when there had been no rain. Well if a fire started it would be dangerous. So they forbid hunters to go hunting deer on the Palomars. Then everybody started saying, that there would be an overpopulation of deer. But it was no. Nature has a way of handling those things, always. The big trouble with us is, that we say we believe in God, and go to church, but how much do we believe in God? We always put a limitation on the Creator, that He does not know, what he is doing. We have to take it in our own hands and live the very thing we believe? Because if the Creator created all, which created you and I, the chances are 100 %, that He knows what to do, when you are talking in terms of overpopulation in this or that. And there are reasons for every thing. Sometimes you will find, that there is an overpopulation of a certain insect. Well if you study it carefully, that insect had a job to do and did it. Then after it did the job it disappeared. Now take the Lady-bud; I don't know what you call it here, but it is a little insect. In California the farmers killed it all of, because they said it was doing a lot of damage. What happened? They did not have oranges, did not have fruits, did not have anything, because that little insect carried pollen from one to the other just like bees does. So the government had to pick it up from somewhere else and start it again in that area. Today you can buy it by the pound – there are millions of them in a pound and let them loose into the orchard – only to have a better production. It shows you how foolish man is. He thinks he knows but he does not.

A man plants 50 acres of corn, and loses the yield of 5 acres by insects eating that corn. So he has got 45 acres. He goes to a chemist and ask, what he can find to save him that 5 acres also. He gets the 5 acres extra corn but then he have to go to a drugstore and buys vitamin that cost him 200 Dollars, where only the 5 acres may bring him maybe 20 dollars. So he spends 180 dollars for nothing because the vitamins that were in that corn are no longer there – the insects that brought the vitamins, were killed of.

Q: You say that astral bodies do not exist?

A: That's right. I know some scientists does say so, either it's a fact or not. They don't have a way out. Even your christian doctrine tells you, there are no astral bodies.

Q: But there have been investigations and experiences and they have come to some results. You have for instance William Crookes the great scientist.

A: It depend all of what you call or classify as astral bodies.

Q: I could give you a number of definitions. But you know, what I mean.

A: I can have an imaginary picture in my mind of something, that is not in existence yet, I can finally get the material and make it and have it appear, then I have taken it out of the invisible bringing it into visible. That is a body, that can be made, and the idea – even if it is burned up or destroyed – still is present. But when we are talking about astral bodies in a sense of humans, that is another story. A lot of people talk about the astral body of their mother, or father that have passed away let us say 10 years ago. *That is throughly false.*

Q: What is the purpose of space people in life?

A: What is *our* purpose in life? That is the same answer. It is just to live, that's all in life. That is what they are doing, that's what we are doing. I don't know of anything else.

Q: There have been many reports of saucers in 1952, 54, 56. Do you think there will be a lot of reports again?

A: I don't think there will be a lot again like that. They have awakened us to our danger, that have wakened us to our potential. I don't think it will be that way again and especially because now radar pick them up on the screen and we have radar chains all over the world. If they were coming too close, they can be mistaken for a missile from an enemy, which they have already almost done in 1961 and 62 over the USA. That could start an atomic war. So they are going to be more careful. I don't think they will appear in numbers like that any more. And one thing more. If a missile is caught out there and we do not understand it, we may think it is an enemy missile and start a war. That has been learned in the years of 1961 and 62. In 1951 they had 500 of them over Farmington in New Mexico all day long and in 1956 there were 6000 seen all over the earth in different places.

Q: What were they doing?

A: We were very close to blow up this world, and all the big politicians met at the Geneva conference. The session was going

on and it was after that, when our government announced that the atomic energy should be used for peaceful purposes and not for war. In other words they impressed our leaders pretty well at that time with their appearances, that called them to change their minds.

Q: Did they tell you, that they will not come back?

A: No, they did not, but there have been less of them and there will still be. When there is a missile or an astronaut out there, they are watching him very carefully and when he should be in trouble, they would save him, and we would think that man was lost.

Q: Was it a symbolic title, when you called your last book: »Flying Saucer Farewell«?

A: No, I called it farewell, because I am going to take it easy myself. In fact I am too old to be running around the world. I like to settle down for a little bit in Mexico and start living there.

Q: Why is it better in Mexico?

A: Because of the climate and the cost of living for instant.

Q: I would like to know something more about reincarnation.

A: Reincarnation, can be spoken of from the very beginning of life. All nature proofs resurrection or reincarnation. Resurrection and reincarnation are the same thing. The reincarnation is a Hindus notion of Eastern philosophy, while we christians call it resurrection. But both means »coming back«. In the spring all nature comes new, trees get new leaves and all that; as far as the plantlife is concerned, you could call that a rebirth, but as far as humans are concerned, the same thing actually happens. It is no different, than if you leave this house – that does mean your death – you go into some other house, and people in this house no longer knows you, or see you around.

Jesus himself said: »I go prepare a place for you, so that you may also be there«. And there are many other statments in the Bible, and not only in the Bible but also in other books, that mean the same thing. When Jesus was on the mountain transfiguring; – transfiguring really means He was up there meditating. – He held sorts of thoughts, and while they went through his mind, they expressed themselves upon His facial expression. They moulded His face like a sculpture would and cleared His face. So the disciples were watching Him. He came down and they told Him, what He looked like – He was changing all the time in facial expression. So

He answered them: »The life of mine is the life of the many«. It was later interpreted, that He was saying: »He died for the many«. But He was meaning: He went through the many stages to the present day. He went through alle the stages, just like you would, if we figure your father is a big business man. He started from ground up, and now you are going to take his place, but before you can be as sucessful, as he was, you will have to start from the ground up too. So you go through all the different stages of expression or learning. And that is what Jesus meant at that time. But reincarnation is an absolute fact, we cannot prove anything, but how many times have people come up upon another person, that they never met before and yet felt they knew. There is a memory trying to come back there but we are ignorant. Or another time you go to some place on this earth, that you have never been before. And all of the sudden you get a feeling, that you know something about that place. But you cannot connect it with the present life. You don't accept, you still ignore, so you say, it might be imagination or something like that. But those are memories that are trying to come back, just like when you were a little baby and you did something. After you are grown up, you forgot it, but all the sudden the thought comes to you, the memory reviewed itself. You say: »I could not have done that, I was too little to even remember. Then your mother maybe remember and confirm it. But you yourself could quite accept that you did the thing or the thing happened to you at that time. It's still memories, that we don't accept, but when we accept those memories here and there, then they begin to develop. A memory is very important. Far more important than we will realize, because it is through memory, you are going to recognize yourself. No other way you could recognize yourself. If I died, and happened to be born on another planet, and you came up there, one way or the other, and said: »I am looking for Mr. Adamski, I know he is down here on this planet«, they would say: »Who the hell is Mr. Adamski? We don't know anything about him«. Because the name or anything known by others is no longer that same. If you knew me for my innerself, you would recognize me immediately, because as soon as we made a contact you say: »That's George; everything is like I remember him«, see?

Things change around but it was the memory, that you would recognize me by, mostly, and it is that memory, that we have neglected, like we neglected telepathy. And memorizing, developed memory is the only part of you, that would continue, just like a record. Nothing else is continued, because your body is left here, your

home is left here, so the only thing you could go back on, is the memory.

Q: When there is reincarnation between planets, how do you explain, that we cannot remember earlier lives on Mars for instance?

A: When you come in to this world – you might come from Venus or Mars – the first thing you know, is what is going on in this world.

We have 10000 years of civilization, of conventions and traditions, and the laws that the society is based on; so they throw that upon you, when you are just a little baby, just opened your eyes. Then, when you grow up, you are taking impressions from mother, father, uncle, aunt, grandfather and so forth. That is one thing, but then society begin to impose their ideas upon you. Then, when you grow older, some things come to you, here and there and you feel yourself a stranger in the world and that you come from somewhere else, but you are afraid to talk about it, because the other fellow would not understand you and so you keep that back and don't give them up to express. The only time you develop anything, is when you use it. So those little bits of memory comes and we are afraid to talk for fear, that we may be called crazy or this or that – we hold it inside and we grow with the masses. That is where we loose it.

Q: How would it come to you? When you are put in a hypnotic stage, afterwards you don't remember anything you did.

A: I don't go for hypnotic stages. You can school yourself to silence the mind, the senses, and listen to your conscience. It takes little time, but you can do it. That would mean then, that you hypnotize your own mind yourself, by putting it in a stage of silence, where it would not be interfering. For instance some of you are talking in a class room, and you are asked about your opinions. You might have it written down and you might not – I will show you, how the mind interferes. You start talking on a subject and pretty soon thoughts are coming and your mind will say: »Are you sure you are right?« If you stop there and question that, you will loose the trend of talk, but if you ignore it, don't pay attention to it, but go on talking, the mind no longer questions. The mind is impatient, yet no longer questions, because during the process of your talk you have revealed, what the mind wanted to interrupt on. And you notice, that there are thoughts coming, that you probably never read or heard about. – A lot of that comes from past experiences. You are like a child that never was taught to be a musician yet he picks up a violin and starts playing better than the best musician, you have

ever known; we call him a genius. In the family you might not find any musician at all.

Everything we do, we have to learn some place. And those are memories, that cause us to act that way, bring forth something, that we ourselves did not know, that we could do; yet we do it. All of that had to be done somewhere, because man grows and lives by experience. These are all experiences, regardless where they come from. You have to have experiences, before you can mention it. How could you become conscious of something, that is not in existence in some place? You could not. Because that which is not existent, is just not existent. You cannot think of it. But anything that becomes a thought in your mind, must be in existence in some place, or you could not think about it. You might not know it, but it is there.

Q: How do you think then about non-existence?

A: You cannot think about it, because there is none.

Q: When I say non-existence, I think of it.

A: You say: I think of non-existence. Well, we use the label, but the moment we say it, it is already existent. When we say nothing, we could not say it, if it was not something. That nothing automatically becomes something, or we could not say it. Our labels, our words are very confusing sometimes, we cannot express ourselves as we sometimes feel, we cannot find words to express. But that is, where most of us are confused. Because if we say nothing, well we mean something that is never to be anything. Non-existence, that is the only way, we can explain it. You cannot visualize it. You cannot even say it. Because as soon as you say is, you have already said something. If you take God, you must not be afraid of that, because you are searching for knowledge, and you say God is as vast as the universe; that is big. He rules everything and all the knowledge, ever known by man, is already there. There we take that God and bring Him down little by little, till we find a little bit of Him, very small.

Then we finally get Him smaller, so you will have a microscope to see Him, and a good strong one like one we have in the USA, magnificence 2 million times. Yet in that small particle lies all the intelligence and the power that we know, moving universe. So we get Him that small, as small as your mind can go, and still all the intelligence and power for everything you know and yet to learn, is there. Then you put it in the bigness of eternity and, it is still the same thing. It is really amazing, how you can go down mentally, where

you take everything to pieces only to find the core or the heart of the vastness and get down so small and still have the vast powers and intelligence. Then you reverse that and you have the same thing. This proves, that there is no beginning; you cannot come to a beginning, and as you cannot come to a beginning, you cannot come to an end. And if there was an end, there was something bigger than the end, to support the end. Just like peeling an onion; each layer supports another layer and you keep on going, and you never get through that. That is why there is no such a thing as an impossibility. The impossibilities are only to the points of man's intelligence. But he can go beyond that point to another stage of intelligence, and there he may find something different, something new and that is the way he grows, and there is no end to it.

Q: But if there is an origin.

A: Well, you could call it evolution or growth or development.

Q: Then you are supposing that there was a O-point.

A: There is no O-point. You know, a O is already something. O-point is something. You could not make a O, if it was nothing, absolutely non-existence; as soon as you make a O, you already have something. When you go to a small particle, so small that you have to use a 2 million power microscope to see it, it could be called O-point, and yet it is there.

Q: Let us go again to the reincarnation. It is not only on other planets, it is on the earth and on all other planets also?

A: It is throughout the universe or cosmos. If there are 50 billion planets, the whole thing can be classed as one university, and the 50 billion planets are the class rooms. You and I will go through everyone of them.

Q: But is there also reincarnation on the same planet?

A: Yes, if you don't learn, enough to get in the next grade, when you go to school, you will be the next year in the same grade; it is the same thing.

Q: If we forget, how can we develop?

A: Once we learn, how to memorize better, the whole thing will come back. We come into this world, and people here don't believe in those things; they load us with a lot of other things, that are not as important because the major part for us, is to try to remember as much as we can, because as I stated before, memory is the only

identity, that you will ever have. There is no other identity, names don't mean anything. And your form would be the same probably and there would be resemblance, but still it is the memory, by which you would recognize yourself or another. There is no other way.

Q: Do you know that you have lived before?

A: I do, yes.

Q: And do you know, what you were and where you were?

A: Yes I do. This is strange, but all things are strange at the beginning. Especially when they happen to one person here and one there and not to all the masses, but all the masses are not developed enough. I met my wife in 1917, during the war, and the first time I went out for a date, we talked about the stars and she said: »Next time I will be born on Venus«. I did not make much of it. We got married and lived 36 years together and now and then she brought that idea up. Well in 1954 she passed away, suddenly, so I thought: I wonder if Mary got her wish. I considered it as a wish. And Jack Mahoney, that's the range rider on the TV in America, he is known very well as a star, came up to the house and talking about it and he said: »You should not question that«. I said: »She probably did«.

Finally the man I met at my first contact in 1952 (Orthon) – came along and said: »You are doubting«. I said: »No, I am not doubting, I am wondering«. He said: »Your wife was born on planet Venus; but I still was a little bit wondering. So he said: »When she grows up and become a little bit bigger, I will bring her in here on one of the ships, when they are coming to earth«.

Well, then I got to thinking and I realised, that the Christian doctrine tells you that: »To day you will be with me in paradise«. Jesus said that to the thief. He also said: »I go to prepare a place for you, that you also may be there«. Showing that no time is lost between one stage of life and another. It is just continuing, right away. Jesus is telling us the truth by making those statements and he is not the only one, because Hindu philosophy also speaks of it.

I then got to balance the thing a little bit and said to myself: The power or intelligence, we call life, is never seen to stop, everything is always moving. It moves everything else, so why should it stop here?

Finally last year Christmas, he brought her in – she was a girl about that tall – a young girl. The facial expression had not changed very much. She recognized me immediately; I could also recognize her, but I wondered, if she was reading my mind.

Well something happened in 1917, that I forgot all about and she read my mind and knew, that I was wondering, if she was reading my mind or not. So she mentioned something, that happened in 1917, reminded me of it, revived the memory. Then I remembered that it happened. She told me number of things. She was born immediately there. She is now a girl that size, they grow up quite fast, and much faster than we do here. She is teaching younger children already, while she in turn is being taught by older people. I wanted a photograph of her, but she said: »I don't want to be interferred mentally«. I asked, what she meant. »Well if you get at photograph of me, and you will be looking at it, you will be thinking at me and thoughts know no limitation. When I am studying very seriously, your thoughts will come in on me and interfere with me. So until I will be stronger and better, I don't want, that you take a photograph of me; next time maybe«. I still have the hope, that I will get a photograph of her. But the resemblances are there, and she recognized me as she recognized herself by memory, not by name. So you see, here is the part, that you got to consider. Now we say, that two of you might have been man and wife in some previous life 10000 years ago, when you came into the same setup. You could be man and wife now again but in the meantime both of you had other experiences. The same would be with me. I am 72. My wife passed away in 1954. She is 9 now. Supposing that I live another 20 years, which I could do, well then she will be 29 years of age, when I am just being born on that same planet maybe. She could not marry a baby, could she? So that time has passed. She could be my mother, or we could go as acquaintances later on. But in lifes to come we might meet again, when the time let both of us be born about the same time.

In each case when you remember previous lifes, it is your memory that tells you, what you have been, where you lived and who the associates were with you. So it is the memory, that must be developed better, than we now.

Most of our memories are very short. You hear somebody say something, you forget it before you know and sooner or later he asks you and you don't no longer know, what he said.

Well that's too short a memory to recall anything especially of past life or lifes. A lot of our children today, young people are rebirths from last war, that have not finished their lifes here. Their lifes was eliminated because of war before time. Some were also from World War I. There is quite a number of them. I know a boy - that was in World War I. - His mother brought him to us

and he remembered the trench, he got killed in; the territory in Europe, and the hour and the minute; and he would talk about that to his mother. Finally his mother was wondering, if he was imagining those things or what. So she went to Washington D. C. to investigate the records. Everything was correct even his number. He is married now and got a family, he speaks often about it. The girl he married, died when her city was bombarded. That was in Germany, and she was about 6 years old at that time. So he married her this time. They are very happy and have children.

The unfortunate part is, that we don't publicize things like that, nobody does. There are more strange things happening to individuals or to people, than the public knows, because nobody talks about those strange things. — They always publish pricefight, or war, or murder, or something like that. But they don't publish, what the people themselves experience or recollect and if they do, people will call them crazy. And they shut up. That is the big trouble in our world today. But people do remember and again, when you talk about telepathy, that is also telepathy, because you are reading the records of the past, bringing it up to the present. It is memory, based on memory. There is not one thing happening in this world, even one little switch of a leave, that is not recorded in the Cosmos some place. Everything is recorded. So you don't ever have to really be without a record, if you work on memory, memory is the most important thing. Even in school, you sometimes have to study hard on some points. Well if you study let us say 3 hours today, to get down in your mind, what tomorrow you may be asked to repeat for the class, what do you have to do; the subject is not so much learning, but memorizing. Memory is the hardest thing to develop, it seems like.

Q: And it can be developed?

A: Oh yes. Take a good poet for instance. He may write a poem for you and me to read, but he get it in his memory so well, that he can repeat it and write it. It is the memory, that we must develop. With a developed memory we naturally are able to go back and pick up memories of the past, because there is a continuous line. The chain is never broken.

A reporter once asked me: »Which came first, the chicken or the egg?« I said: »If a two year old child will do its own thinking, it could answer you«. And he said: »No, it is not easy«. I said. »The chicken and the egg both came the same time«. He could not accept that. Reporters are stupid sometimes. The chicken and the egg

had come at the same time, because the single cell, had the potential of both of them, or neither one of them could come. That is why you can be father of either a little girl and a little boy. For the potential of either one is there. The predominant one will come forth. Or both sometimes.

Q: Is reincarnation in the subconscious or the conscious?

A: Now let us explain again. Subconscious means, underlaying record. One is a record and the other one is conscious of that. The mind fears, what it does not know and it is the mind, that is running. In the subconscious a record is the house of records. The conscious mind brings the records on.

Take mathematics for instance. In our mathematics one and one equals two. In Cosmic or universal mathematics one and one equals three. You see how much difference there is in study and teachings. Everytime a man and a woman combines, we say woman is negative and man is positive, they have a child – number three. The same thing with plantlife, and all life – always three. So your Trinity comes in there. Now you take subconscious, conscious and the mind – three again.

Q: What are the causes of incarnation?

A: It is based on your development. Just like going to school. Because you develope and learn everything in a particular grade, you could not answer all questions in the next grade, because the next grade is going to be higher. You keep going on for ever. That is what Jesus in the christian doctrine calls your fathers business. To be in on your fathers business you have to learn from the ground up.

Q: All people around us do suffer.

A: Yes, I don't know of any, who don't suffer. Because everybody is doing wrong, maybe not intentionally but then through mistake in one way or the other after all. Nature, as we know it, does not care about you or me. If a volcano is to blow and we are right near, well we are going to be burned or be consumed. The volcano action is necessary, because the pressure in the earth builds up. If that was not coming out through the volcano – which is a safety valve – it would blow the earth into pieces, and everybody would go; now it would maybe cause the death of 300 people, but 3 billion people are still living. You see, nature tries to tell us one thing, our mind is telling us another thing. And our mind is schooled after all the generations of people, that lived wrong before us.

Q: Is that not injustice.

A: There is no injustice, because in time everybody pays, what he must pay for. For instance, once my mother wished somebody very bad results. 20 years passed and everything was fine. Then things happened and she said to us: »My God, what have I done, that God is punishing me like this«. So we went together and I said: »Mam, what did you do? Can you trace back any thoughts, that you had, that were bad ones, against somebody?« And she did. Finally she remembered that she wished those same things to people 20 years ago, that she did not like. They came back 20 years later. No, if nature was to be unbalanced by man, then man was the master and he could do almost anything.

For instance if man goes to war, he destroys beautiful trees, palm-trees, everything. If nature was to be affected by that, she was never to have palm-trees again in that territory, but 5, 10 years later you see palm-trees there.

She fixes up everything, that man does wrong and goes on. Yet it is man, that pays for the destruction, one way or the other. The law of justice always works. Figure you get terribly mad and throw things to pieces, then someone says, »All right boys, we gonna have dinner.« So we sit down at the table and have dinner, we are all eating and everything is going fine.

20 minutes later you say: »Do you have some soda?« Your stomach is all upset, because your mind is upset and your stomach would not accept the food. The chemists in your stomach, that digest the food, would not work, they were on a strike. So you got an indigestion. And right away you pay. If you are happy and have lots of fun – don't care what happens, and you go to that table, and the meat that you might eat may even be spoiled, you would not even know it on your stomach. It shows you how this all works.

If you are not in harmony with things, you will pay. If you are in harmony, nothing happens, everything is just fine and you don't need religion for that. You can see that in chemistry. You combine two elements, that are not in harmony with each other and next you read in the paper, that the professor blew up the laboratory.

Q: When a man is killed, what will he be next time?

A: He comes back to finish the job, that he did not finish. If a man is killed in a war, he is often killed with hate and fear. You may know some boys or girls like that. They are killed in a war,

they hate, they like to kill, because they died that way. We have groups we call gangsters, e.g. girls and boys, hating everything.

They would hit an old man or woman on the head, just to be doing something, to torture them. We have them in America, we have them all over the world. They died that way. To prove this for yourselfe you can think of this: You get mad to-night. You won't sleep very good and in the morning you wake up still mad. Man that dies with hate, like in a war when killing another man, dies with hate as his last thought. When he reincarnates, he reincarnates with that thought as a start. We find all kinds of them from World War II. USA got a lot of them. They go out in the streets even in daytime, hit somebody on the head, beat them up, even kill some. You are asking them: »Why did you do it?«. »I don't know, I wanted to do it«. Some will say: »I hate people«. They express everything, that happens in a war. There is your law of recompense already. Because the people said: »You guys, you go, the government want you«.

They now come back by reincarnation and they do all those things, that the soldiers did.

All those things are happening, and we can learn from it. There is more of that now after World War II, than there was after World War I, because World War II was more brutal with more people killed, and more hate. I know a fellow, a very nice man, who is a scientist at the air research. He got a family, wife and children. His wife's father was a colonel in the army. His mother and father are very nice. He took service in the marines. When he came home after 4 years, he wanted to kill his family, it worked on his mind. At night he could not sleep. He came to me and talk it over, and he had to fight this whole thing very bad. Finally he got over it, but that is the feeling he had. You know why? Because they said to him, that every living thing is just an object, like a tree. Shoot at it, it don't mean anything. That's the way they trained him. Now about those guys that have come back with that sort of thoughts. Sure they don't respect anything either. They hit old people on the head, or even little boys or girls and beat them up; some have died from mistreatment, they committed a murder. Then the police gets them and as teenagers they get 20 years; if they happens to be 21 or more they get gas chamber or the electric chair.

Q: Don't you think it is only because the changements in our society go too fast?

A: Society is to blame for it, sure, and the society is paying for it. To arrest a man, trial him and execute him by electric chair or

gas, cost the government over 250.000 dollars. They could do a lot of good with that money. Now they have to use them to get rid of a man or woman, and it is the society, that created it.

Q: I think only man can change things.

A: That is right. No one else can. Man has to get better idealistic ideas and then live them. Otherwise there will be hell on earth. It is very funny, when Michael became Satan, the Bible tells you, he was put down to earth.

So I guess in this world we are all Michaels friends – little devils. We like to torture each other and torture ourselves. (Joke).

Q: But how can you explain that the space people don't have the same difficulties as we have?

A: Because they respect one another, consider each other as sisters and brothers. In our world we don't do that. We go after how much money we have, what position we hold and so forth. Now you consider one thing: If it was not for the man that digs with a shovel in the mud to dig a trench, would there be an ybuilding? No, he puts the trenches in there. Then the bricklayer comes along. He puts the foundation in and there goes up the walls. Then we send an artist to paints the murals on the walls, beautiful pictures, and the building is finished. But if it was not for the digging shovel man, that dug the trench, he never could have painted that beautiful mural on the wall, because there would be no wall to paint. So they all are important, the talents depend upon the other.

And that's the way the Venusians consider every man is valuable. Here we are valuable, if we have a 1.000.000 Dollars, and we can take a lady to a restaurant and give her big and nice dinner and put a diamond ring on her finger. Oh, then everybody has fun! That's the way we value those things. But I will tell you, it's a lot different.

Q: It is a question of values.

A: Yes. And yet all the values are equal, because first the earth has to be here, before the apple tree can grow. Then the apple tree has to grow, before we can have the apples, that are growing on it. This is a wonderful world, if only people could understand one another like sisters and brothers and live this way. Lots of fun and lots to enjoy. But now, through religion, and through governments, we are made to be feeling strange to each other. Yet I die, I'm from America, but I have been born in Poland, so I got two countries.

You die, they die and say he is from some other place and he is still from another place, we all go the same way, when we die, nobody is different, we are all the same. Here is a funny thing I want to tell you and it is true. – honestly. Figure a spot on earth where nothing grows not even the simple grass, just bare. Say I die, and you dig a hole in that bare spot 6 foot deep and put me in there. You say a lot of ceremony, holy water, you take a handful sand and throw it right in my face, while I am down there in the hole. 6 months later, grasses start growing, where you buried me. I am a good fertiliser. A cow could come and eat the grass. And you could milk the cow and drink the milk. Then you are drinking me. And when the cow gets fat, you kill it and cut a steak of and eat it, then you are eating me; our bodies, the forms, they go back to earth and become a good fertiliser. Yet look how big we make ourselves, and then remember that it makes no difference, if a man have 10.000.000 dollar or nothing, all go in the ground. Yet that is not me, you put in there, only my body. That's all. The consciousness – my innerselfe – you never saw, you saw my body, that's all. You never see gasoline in the chamber of your car. And you don't see the spark either, you just drive your car and it then explode and move forwards. Car by itself could not run. The same thing with the air we breath; it does the same thing to our bodies. That is the real thing – we never see it. We just saw that body, we buried there, and the body brings up the grass. I want to give you a little joke, this is funny. People say: »Mr. Adamski, if you die, how would you want to be buried?« Oh, if law permits, I would like to be put, where the buzzards will eat me, and leave my bones laying in the open. Then when they fly, I would be flying also, I just became a buzzard. Then when I flew and saw a fellow, that did not agree with me, calling me a crackpot, I would drop some kind of load upon him.

After all it is a truth, because the whole thing revolves like a circle. These are facts, one thing eats up the other, and if they didn't, we would not be living. The apple tree produces the apple, you eat the apple and the apple becomes you. And the animal we eat, becomes us.

A: One more joke: Do you want to go to heaven?

Q: Yes.

A: And you?

Q: I don't know. For what should I do there?

A: Well it is supposed to be celestial, a beautiful place, all kinds of gold and everything.

Q: I think, I will then.

A: I'll tell you something – I would not want to go to heaven. Why? Because the priests and others tell you, that when you finally come to heaven, you will have a beautiful lady, an angel, sitting on your right shoulder. More beautiful than any lady you have ever seen on earth. And she plays on a harp or a lyre. Always beautiful music. And you are still human, you still are a man, so you get a desire.

Q: No, because in paradise there cannot be a desire.

A: Well, in this case you get a feeling, you are human, you don't want her to sit on your shoulder, you rather would put her on your knee, but you cannot do that in heaven. It will be hell, not heaven, see?

Q: Heaven is not like that.

A: Well, Ministers tell us, that heaven is like that and that. This is your reward after being good. That's why I don't want to go to heaven. I like ladies, because if it was not for a lady I had not been born. I only gave you this example, because that is the preaching in the religious field. When you are really honest to get through, you would not want it, because if you co-operate, life works all together.

You have an electric light here – do you know, how the light comes? Because you have the positive and the negative. The same thing with man and woman. The law of attraction puts them in balance and produce a child. In electric light it produces light. The same power the same combination.

Q: Between positive and negative electric powers you have always this attraction, but not with another human being. You can fall in love with one girl and not with another?

A: What is a human being? We call some creature like ourselves a human being. Sometimes I am wondering, if that is the right name. The way we behave, I think it is a shame that we call ourselves human being sometimes, when you look at the rest of the people. But we only have a label to name a form. That label may be wrong. We only name it, to identify certain forms from other forms. But in every case it is a life; it could be in a flower, in a bird, in the blade

of grass, in every living being. Each one serves its own purpose. The human being is the only animal, that is capable of expressing the highest intelligence. The others are more or less stationary. They express their own particular face and that is all. It is only man, that can cut a tree down and make a table out of it. It is only a man, that can take minerals of this earth and make an airplane to fly from America to Belgium. So he is the highest intelligence but still he is no different than all the rest, except all the rest serves him. Because the trees serves him, the blade of grass serves him and the flowers maked him happy in many ways. Right now you are smoking a cigaret. So you enjoy it - it serves you. We drink that glass of liqueur. What is it? It is made either of wheat or som other fermented grains. If you take that same wheat into your body, it will be fermented there too; it will produce alcohol, not as strong as this, because it is not concentrated, but it will do the same thing.

Q: Do the space people smoke?

A: Yes, I have seen them smoke here; not all of them of course, but neither every else on earth smokes either. In other words, they have calesthetics, they have fun, sports, everything like we have; one thing they don't have, that is to hurt someone like for instance in the sport with price fighting, boxing an so forth. 2 men got killed in the last 6 months in USA. That is brutal, they don't go that far. Or wrestling, break someone's arms - they don't go that far. They go to develop the body, but not to hurt any one . . .

That is like you are saying, you have never been in America, and you wonder how California is. Well, California is a lot different than your country. First you will have a lot of sunshine . . . Next we have come to a credit system in all USA where we no longer need to carry money. We got credit cards, we can buy anything any where in the world. We have to pay for it, but the difference between a creditcard in this world and a credit card on Venus would be, that you don't have to pay it on Venus. You credit it to be equalized in the grounds of everyone else.

So you get equal amount of necessities for life that others gets, nobody gets more and nobody get less. If you got a family of 4 children and a wife, well you need a house with two bedrooms or three. Well you get it. If you are alone, you don't need the three bed rooms, one is enough. So you see, that way, nobody has to hit someone on the head to get an extra dollar, because he has got just as much as the next fellow.

Q: And because they are full of love for each other.

A: Oh! well yes, but this word love is sickening me. We talk about love and we don't know, what love is. It is a big trouble, that we have to classify our love. The word that is used to-day for love is so mysterious – that love seems to cover up all the crime. When it does, it kills people.

They don't support the kind of love we know here. They support, what they call in the Bible charity, which asks for nothing in return, when a service is rendered. Not even the thought of thanks. Then you say, is that right, can that be true? Look at nature. The sun is hot, you say; »I'll go out of the sun, I cannot bear it anymore.« You go under a tree. The tree does not ask you for a reward« or say: »Thank you for shading me«. It serves you. The air you breathe does not ask you for anything in return, it is given to you freely. The raindrops that come the same way. Nature serves without discrimination. Some people may call you evil, some people may call you a saint, yet evil and saint as the people classify it.

Sun shines on them all, raindrops fall on them all equally alike. The tree would shade them from heat all alike. There is no discrimination. So if we are going to know our Creator there is only one base, you should know, and that is his creation. And as his creation manifest without discrimination, then He must be without discrimination. The spacepeople live nature's laws, we call them universal or cosmic, because you find them everywhere the same. That is how simple the whole program is. Yet people cannot see it. Why? Because they think this and that by different religions and they become strangers to each other and they are frightened to death not do the thing some priest or minister told them to do. So they do his will, not their will.

I don't mind to tell you, what I said to a minister. I said: »Look, you got 2 boys, and the one boy does not like the other. They are both brothers. One comes to you as a father and ask you to get rid of the other boy, give him a permission to kill him, would you do it?« He said: »Of course not; they are both my sons«. Yet you got to the altar in time of war and pray to God to give you victory over another nation, people like yourself. You are asking God to do something, that you admit, that you would not do yourself.

Then another thing. It shows you how close we are related to the Creator, how we are the expression of the Creator. In the Bible we read: »You cannot move a finger without the will of God. I had a minister come to my place and he said some nice things, so his wife kissed him on the cheek. I had an opportunity to speak up and I

said: »Your wife just kissed you on the cheek.« »Oh, yes, she always does, when I say something nice.« I said: »Now tell me, who kissed who?« He said: »She kissed me.« I said: »No, it was God kissing himself.« Because there is just as much God in you than in her, and the only power you have behind you is God. So it was God kissing himself. How would you analyse it in so-called earthly manner? That breath of air that I breath, makes me talk and walk and I am called a living being, am I not? What makes you talk and walk? The same air is it not? So if it was not for the air, could you kiss me or I kiss you? No, then if that is called God, the breath of God, then it is God kissing himself is it not true?

Q: Are they selective too, in a company do they choose?

A: Of course there is a kind of law of attraction. I can talk science with him, but I could not talk science with the other. That's why I talk science with the first one. But I can talk farming with the second, and I respect them both alike.

Q: Not speaking of respect; I am speaking of people; you are not friend with everyone on earth of course. But are they friends, I mean close friends with everyone?

A: The only thing to recognize is the life, but not as we do. We recognize the facial expression, the body. But the life the intelligence that is inside of you, that should be recognized.

Q: But they are not all of the same stage of intelligence.

A: Oh, yes on those grounds – that is their religion.

Q: Their intelligence is all similar?

A: That way, yes. One fellow has got an idea, or a mental hability to make papershakers. The other fellow cigarets, the other fellow something else. They differ there. When it comes to recognizing life, it is equally recognized the same.

Q: I understand there are no social struggles.

A: No, there is no castsystem and so forth.

Q: But they are people who enjoy doing certain things together and ... (Laughs!).

A: They better be or there will be no reproduction ...
